GPDT15 Dimmer Power Controller

- TO AVOID FIRE, SHOCK, OR DEATH: TURN OFF POWER at a circuit breaker or fuse and verify that power is off before installing a Levven product.
- Install and/or use Levven products in accordance with local electrical codes and regulations.
- Levven power controllers are to be mounted to listed electrical junction boxes of the suitable size to satisfy the electrical code in your area. We recommend using plastic junction boxes for best performance or if that is not possible, ensuring the power controller antenna is sticking out of a metal junction box. This recommendation does not apply to switches.
- If you are unsure about any of these instructions, consult a qualified electrician.

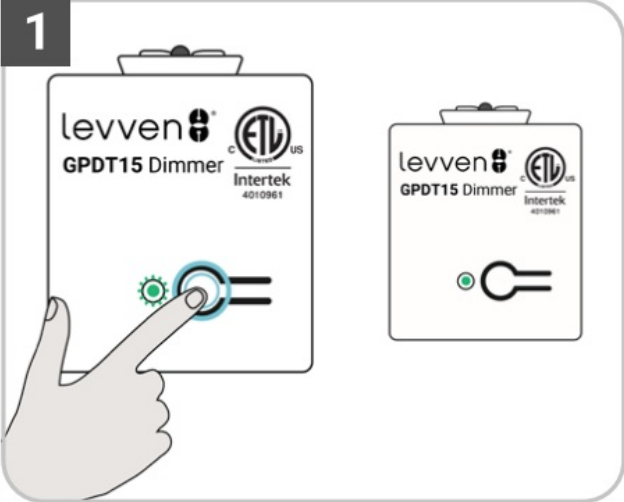

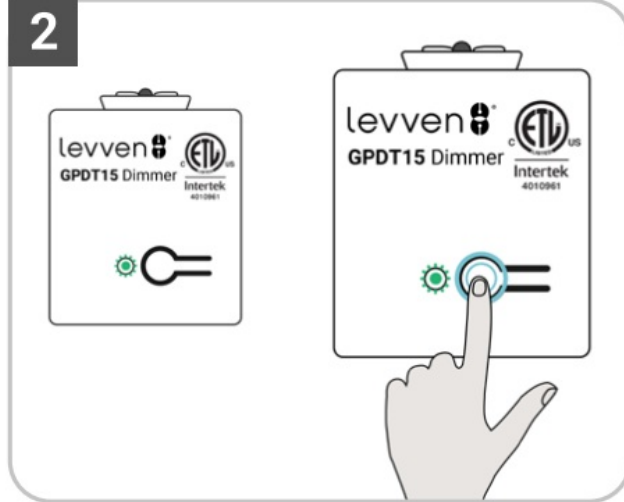

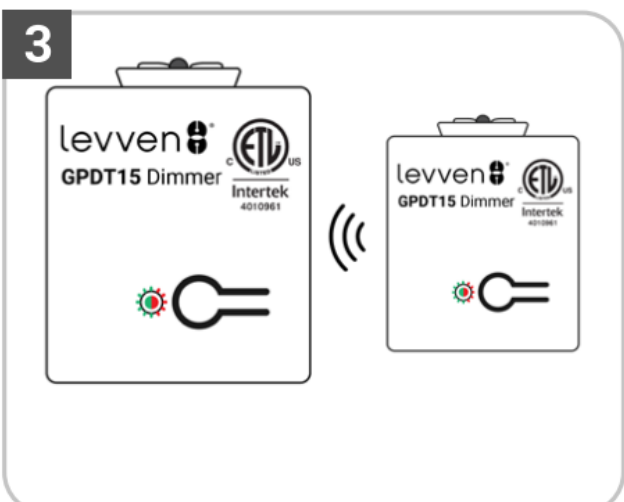

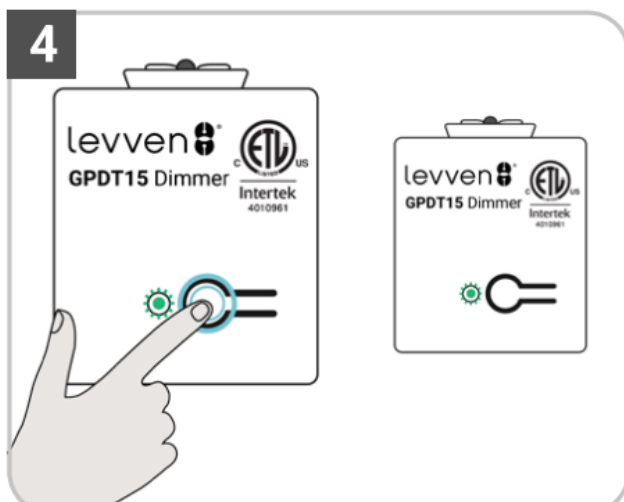

Wiring

<div data-bbox="135 100 204 168">3</div> 	<div data-bbox="823 100 892 168">4</div> 
<p>Dimmer controllers are to be mounted in junction boxes of a suitable size to satisfy the local electrical code.</p>	<p>Connect the white wires from the power, load, and power controller together.</p>
<div data-bbox="135 781 204 848">1</div> 	<div data-bbox="823 781 892 848">2</div> 
<p>Connect the black power wire to the black wire of the power controller.</p>	<p>Connect the black load wire to the red wire of the power controller.</p>

Groupon

Grouping controllers together permits one switch to operate multiple controllers or add Levven Q to access controllers from a mobile device. Only controllers with no previously saved group or pairing can join a group.

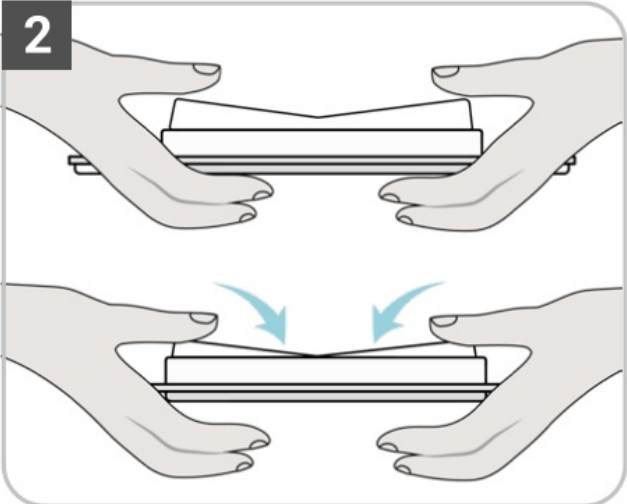

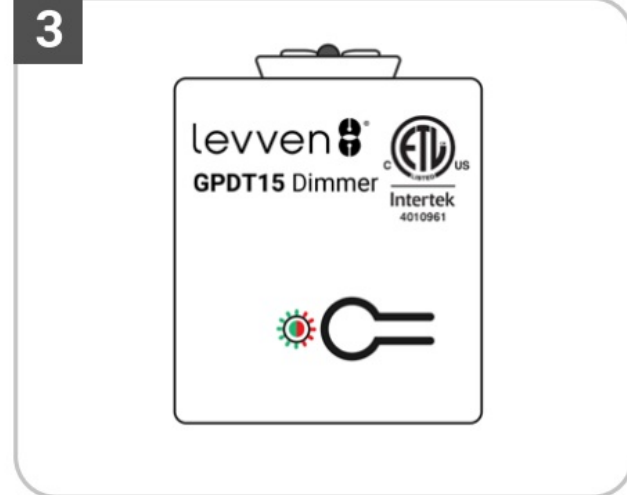

NOTE: If there is no grouping request received within 60 seconds, the controller will quit the grouping procedure.

<p>1</p> 	<p>2</p> 
<p>Press and release the pair button on the first controller to initiate grouping. This controller's LED will blink green.</p>	<p>Press and release the pair button on the new controller being added to the group. This controller's LED will blink green.</p>
<p>3</p> 	<p>4</p> 
<p>Both LEDs on each controller will start blinking red and green to confirm a signal is received.</p>	<p>Press and release the pair button on the first controller again to complete a grouping. Both LEDs will flash green 3 times to confirm the grouping.</p>

Pairing

Pairing a switch to a controller establishes a connection to send on, off and dim commands.

NOTE: If there is no pairing request received within 60 seconds, the controller will quit the pairing procedure.

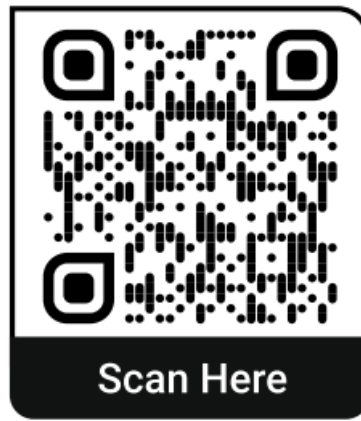

<p>1</p> 	<p>2</p> 
<p>Press and release the pair button on the controller to initiate pairing. This controller's LED will blink green.</p>	<p>Squeeze and release both ends of the switch simultaneously.</p>
<p>3</p> 	<p>4</p> 
<p>The LED on the controller will start blinking red and green to confirm a signal is received.</p>	<p>Press and release the pair button on the controller again to complete the pairing. Its LED will flash green 3 times to confirm pairing. If pairing is unsuccessful, the LED will flash red 3 times. Please restart from Step 1.</p>

Leven Controls GPDT1 5 Controller

Product Specifications

Input	Paired Switches	Wireless range
85-265VAC, 0.1-1.5A, 50/60Hz	Up to 10 Switches	Up to 75 m / 250 ft
Radiofrequency	Encryption	Color
900 MHz band	128-bit	Orange
Operating temperature	Enclosure rating	Longevity
-40C to 50C	Indoor use only	65+ years at 15 operations per day

- Want a visual and interactive installation experience?
- Are installing and configuring multiple controllers.
- Have the Levven Q Mobile Gateway.

Setting minimum and maximum brightness levels

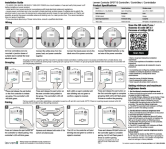

1. Set the dimmer's maximum brightness level
 - a. Press and hold the up/on button on the switch to increase the light's brightness.
 - b. If the light flickers, release the up/on button. Press and hold down/off on the switch to dim the light down to the point where no flickering occurs.
 - c. Double-click the pairing button on the GPDT1 5 controller. This sets the highest brightness.
 - d. The GPDT15 controller's LED indicator will flash green to confirm the setting is saved.
2. Set the dimmer's minimum brightness level
 - a. Press and hold the down/off button on the switch to decrease the light's brightness.
 - b. If the light flickers, release the down/off button. Press and hold up/on the switch to brighten the light up to the point where no flickering occurs.
 - c. Double-click the pairing button on the controller. This sets the lowest brightness.
 - d. The GPDT15 controller's LED indicator will flash green to confirm the setting is saved.
3. Reset the dimmer's max/min brightness level to factory default
 - a. Triple-click the button on the GPDT15 controller. NOTE: This will not clear any pairings or groupings in the controller's memory. It only resets the brightness max/min settings to factory defaults.
