MULTI BCONE OPERATION

When multiple Pool Units are paired with one Home Unit, the Pool Unit must be selected before an operation mode is set. The Select Device button alternates between the multiple Pool Units. The LEDs indicate the Pool Unit that is currently selected.
Press the Select Device button to light the LED of the relevant Pool Unit (i.e. press once to select the first Pool Unit, press twice to select the second Pool Unit, and so on).

After selecting a Pool Unit, one of the operation mode LEDs lights up for a few seconds to indicate the current operation mode.

To change the Operation Mode for the selected Pool Unit, see **operation Modes.**

The Home Unit icons indicate current issues related to one or more of the Pool Units

The Swim Mode button LED blinks if at least one of the Pool Units is in Swim mode

The On button LEDs indicate which of the Pool Units are in On mode

THANK YOU!
