File Manager

At the end of a recording, the File Manager window and dialogue is displayed.

The File Manager automatically collects all the relevant associated files for a study and assembles them into appropriate folders on the PC.

This makes it much easier for local review and/or the upload of files for remote review to take place.

File Manager works for the following recording types:

- Ambulatory (amplifier) recordings with video

- Dual recordings with or without video

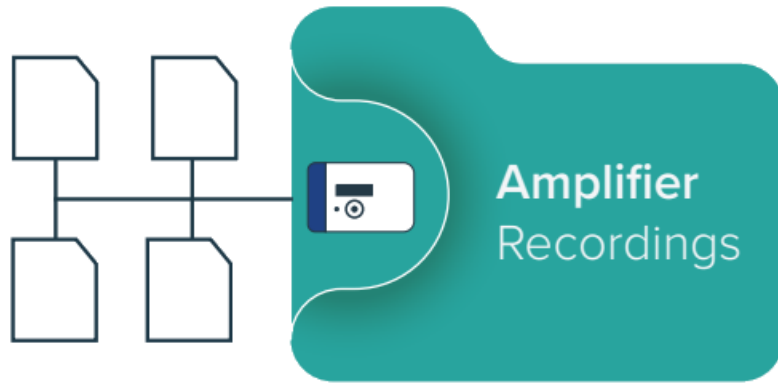

File Manager automatically assembles files on the PC as follows:

- **Ambulatory folder**, e.g. SmithJoh_220311134555

The File Manager assembles the ambulatory files, Events files and all video and synchronization files in this

folder.

- **PC folder with the [PCFiles] identifier**, e.g. SmithJoh_220311134555[PCFiles] The File Manager assembles the PC files into this folder.

Following Stop Recording, the File Manager steps are as follows:

Note: The File Manager can be launched from the main File tab as well as automatically at Stop Recording. The options available here are as follows:

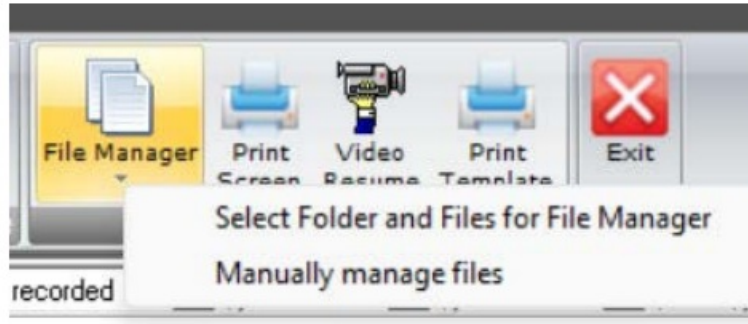

Either

- Proceed as above for the last patient recording

Or via the drop down list:

- Select folder and files for File Manager

- Manually manage files
