LiGHTPRO 198A 24W Transformer

Safety and mounting regulations

Carefully read these safety instructions and follow the advices stipulated. Keep these instructions for possible later use.

SAFETY

- This is a general manual. Consult the product sheet for a detailed description per product.
- This transformer functions best at temperatures between -30 and +40 °C.
- The total wattage of the connected products may not exceed the power of the transformer, otherwise irreparable damage could occur to the transformer.
- The transformer must be connected to the regular power network (230 Volts 50 Hz) and is suitable for use indoors as well as outdoors (IP44, water-protected).
- Do not mount the transformer near a water-spraying system.
- If the fixed power cord (230 Volts 50 Hz) of the transformer is damaged, the transformer must be destroyed.
- The product may not be adjusted or converted, as this may make the product unsafe. The transformer may never be opened for the purpose of repair.
- Uses other than those for which the product was designed, may lead to damage and the risk of short circuit, fire or electric shock.
- The transformer's plug may only be inserted into the socket once the entire lighting system has been installed.
- This is a double-insulated device and does not need to be connected to an earth conductor (Protection class II).

This product meets the EU standards for health, safety and environmental protection.
