FAQ

1. No sound?
 1. Please check whether the audio cable is plugged in and replace it with another audio cable.
 2. Please check that your device is in silent mode.
2. The voice is too small? The poor quality?
 1. You can't use it as a audio amplifier, It can't be able to amplify your original source volume and change your audio quality.
 2. When begin to using our audio switcher, all mobile phones. computers and notebooks and so on original source volume will be adjusted to protect your ears mode automatically. You can adjust our original source volume according to your need.
3. Can I use this box with a headset that has a microphone, receiving signals from a my phone and my computer ?
 1. You could use it to HEAR the audio coming from either your computer or your phone. However, you can't use it to send the microphone from your headset back to your computer or phone. This is only wired for a TRS connection not the TRRS you would need to also carry your microphone.
