Components:

- **Switch** – mounted on the side of the furniture and controls all motors and functions (reclining, power headrest, lumbar, etc.) via a direct connection with motors.
- **LCD touchpad** – mounted on top of the console of the love seat, controls all motors and functions(reclining, power headrest, lumbar, and light cup holder) via a direct connection with motors.
- **AC wall plug** – connects the power transformer to the power outlet.
- **DC cord** – connects the power transformer to the DC socket (mounted on the rear bottom of the LAF arm

stump).

- **DC socket** – receives power from DC cord then transfer to motors.
- **Power Transformer** – A box-shaped unit to transfer 110V AC power to 25V DC power to supply for the furniture.
- **Control box** – connecting the switch to the seat motor and Reading light.
- **Cup holder** – mounted on top of the console of the love seat.
- **Seat / Headrest/ Lumbar Motor** – motors mounted on the mechanism to drive movement on seat/headrest/lumbar via switch control.
- **Mechanism** – the motion mechanical frame unit within the piece of furniture.
- **USB Ports**– located on side switches (for sofa & love seat & chair) for charging USB-supported devices.
- **Power Strip** – located on the drop-down table and supplies 110V AC power.
- **Reading light** – located inside the headrest of center seat, flip up the headrest to reveal.

Quick Trouble-Shoot for Motors Malfunctioning:

Below are some possible reasons to cause motors to stop working:

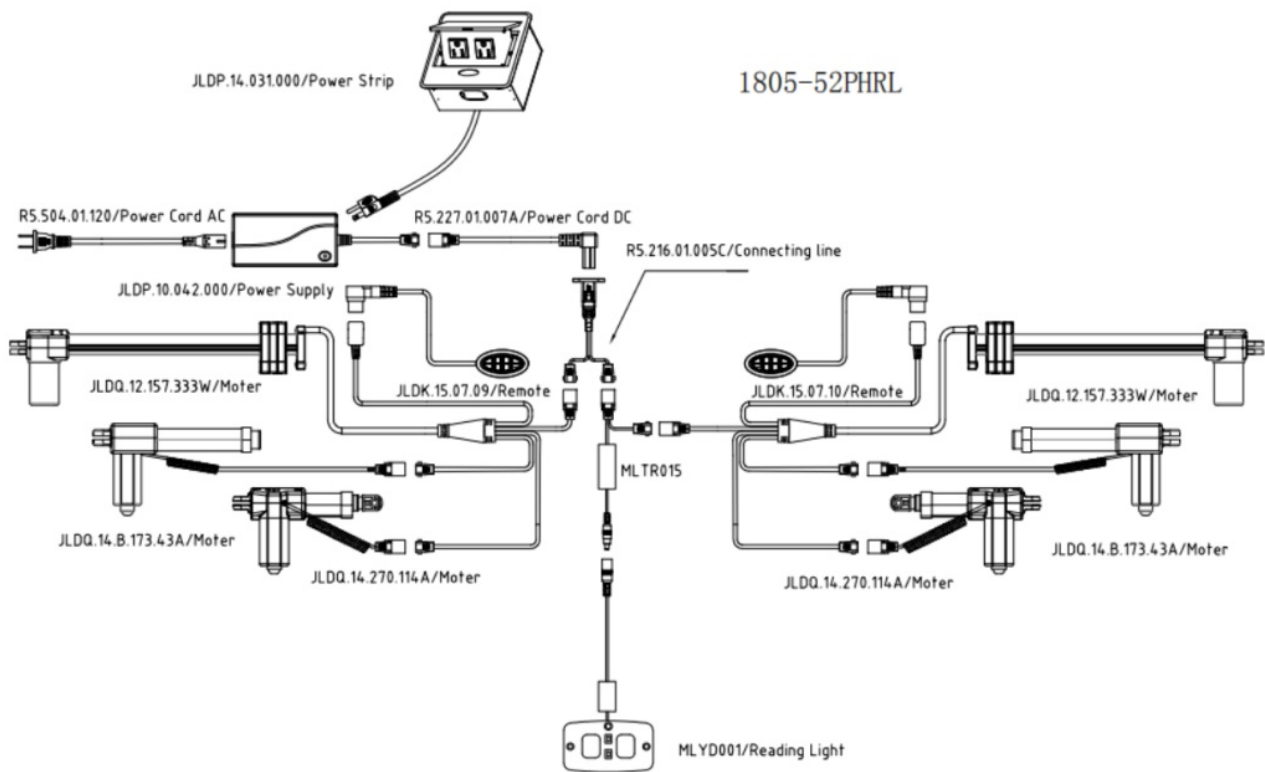

1. Loose connection or wires not securely plugged in.
2. Broken side switch
3. Broken DC socket
4. Broken power transformer (especially when ALL motors stops working on one unit)
5. Power cords damaged
6. Motors failure

NOTE: In some cases, a button on the switch might be stuck after being pushed, thus continuously activating the motor. This can cause overheating or even damages on the power transformer.

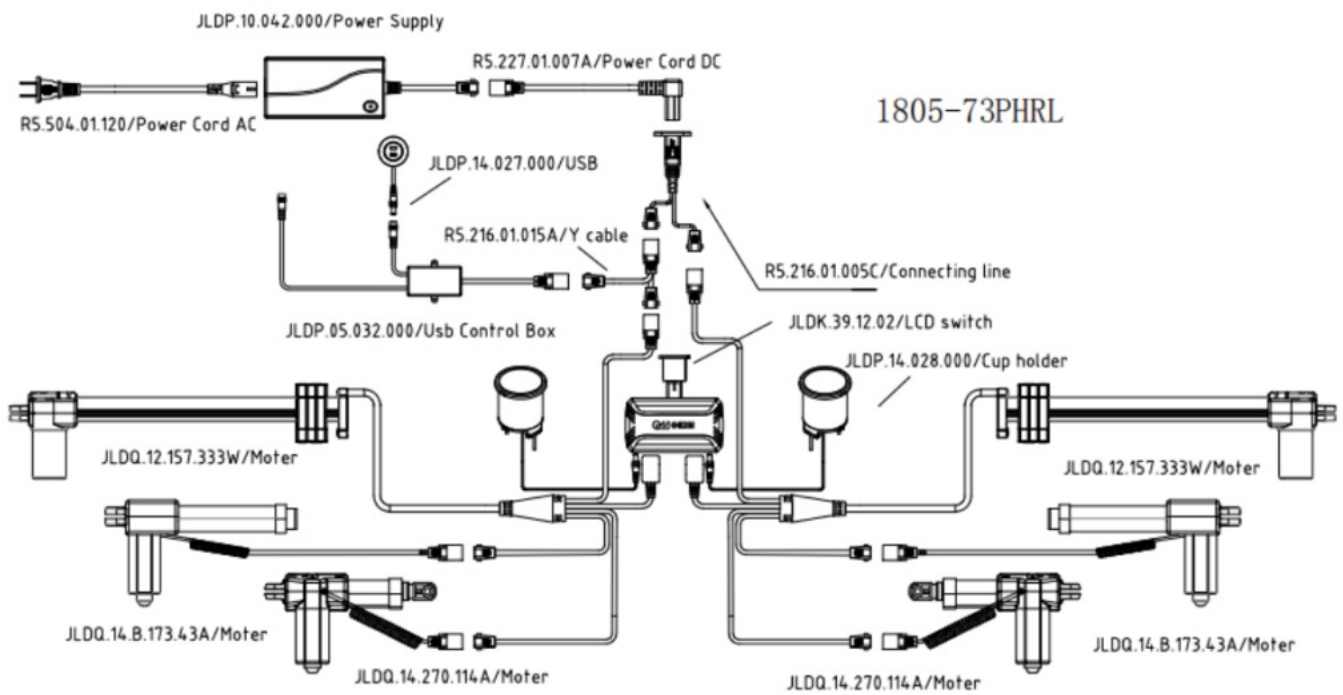

Trou able -Shooting Guide

NO	The fault	diagnosis	To rule out
1	The power supply doesn't light up, and no output	The power supply fail	Replace a new power supply
2	Power supply light flashing	Power self-protection function start signal, parts, and wires may be shorted	1 Check the surface of the actuator/hand controller, whether is crushed 2 Internal short in the actuator/hand controller, replace the part.
3	The light of the power supply is always on, press the hand controller and the actuator can't work.	1. The actuator isn't powered, check whether the plug is loose. 2. After checking the plug, the actuator still can't work, exchange the actuator is OK. 3. After checking the plug, the actuator still can't work, exchanging the controller is OK.	Reconnect the plug.. Replace a new actuator. Replace a new hand controller.
4	The actuator cannot be retracted after it has been removed	Check whether the plug is loose. The actuator internal failure.	Reconnect the plug.. Replace a new actuator.
5	There is noise during the actuator moving	The noise is caused by the interference of the mechanism.	Replace a new mechanism.
6	USB IPAD USB can't charge the IPAD	USB2A The output current of USB is only 1A, the input of the IPAD is 2A	Can't charge the IPAD
7	USB USB without output	The hand controller internal failure	Replace a new hand controller
8	Reading light doesn't light up.	1 Loose connection between reading light and touch-sensor switch 2. LED light failed.	Check and secure connection between reading light and switch (cable can be found behind the back of the center seat) Replace the LED light.
