**Logitech H110 Stereo Headset**

## What's in the box

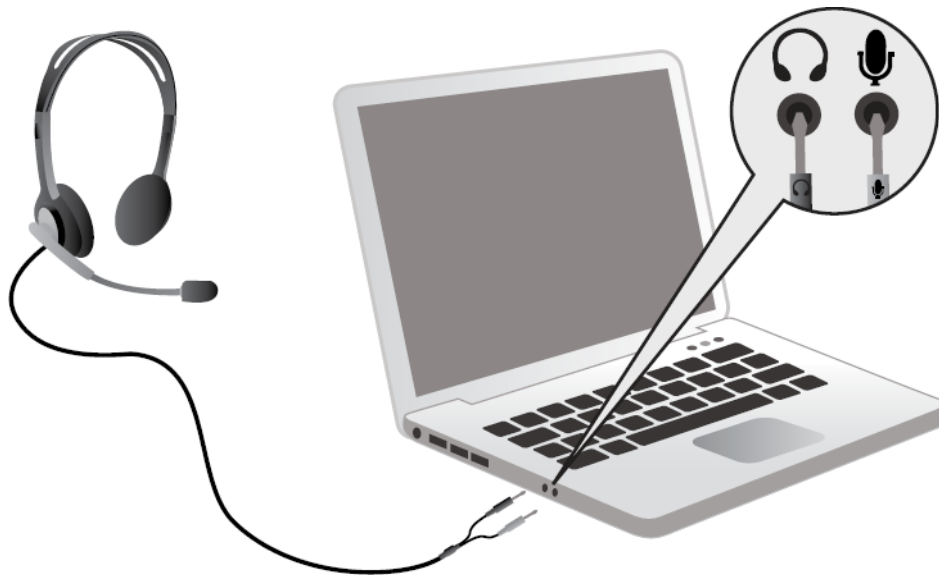

- Logitech Stereo H110 Headset
- User Documentation
- 2-year limited hardware warranty

Thank you for purchasing the Logitech® Stereo Headset H110. Plug your new headset into your PC sound card and use it with your favorite Internet calling application, media players, or game.

## Help with setup

### The something not sounds right? No sound at all?

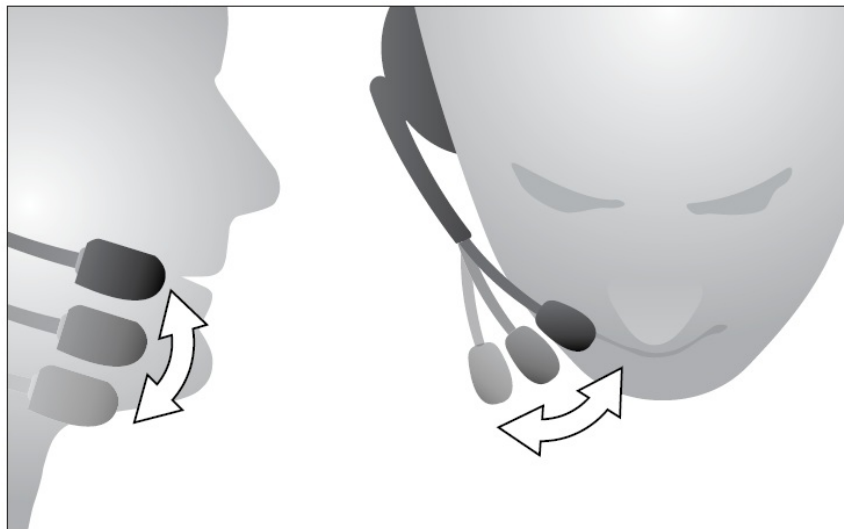

- Ensure the headphone and microphone plugs are inserted in the respective headphone and microphone jacks on your computer's sound card.

- Increase the input and output audio volumes in the operating system and application.

- Unplug USB audio devices from your computer.
- Set your computer's sound card as the default audio device in the Sounds Control Panel, and then restart the application you wish to use with the headset.

Visit [www.logitech.com/support](http://www.logitech.com/support) for instructions on configuring your audio devices within the operating system.

**Protect your hearing**

## Listening advice to avoid hearing damage

Listening via headphones, earbuds, or headsets at a high volume may cause permanent hearing loss to occur. The louder the volume, the less time is required before your hearing could be affected.

### To establish a safe volume level:

- Start your equipment with the volume control at its lowest setting.
- Slowly increase the sound until you can hear it comfortably and clearly, and without distortion.
- Avoid setting the volume at a level that prevents you from hearing conversations and other similar noises around you.

Once you have established a comfortable sound level, leave it there. If you experience a ringing in your ears, discomfort, or muffled speech, reduce the volume or stop listening and have your hearing checked.

See the product support page on the Logitech website [www.logitech.com](http://www.logitech.com) for additional information.

## Features at a Glance

### Noise-canceling microphone reduces

Background noise for clear online conversations.

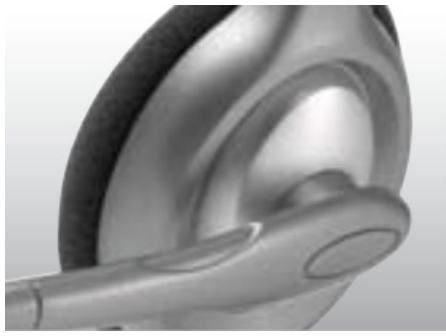

### Rotating boom mic

Pivot it to the best speaking position and out of the way when you're not on a call.

### Full stereo sound

### FAQ's

#### Is Logitech H110 noise Cancelling headset?

The Logitech H110 Stereo Headset is a stereo headset that can be used for internet phone calls, movies, music, and gaming. It features a noise-canceling microphone that eliminates background noise and rotates out of the way when you're not using it.

#### How long is the Logitech H110 headphone cable?

Logitech H110 Headset (1.8m cable length, 3.5mm audio out) 981-000271.

#### How do I use my Logitech stereo headset?

Simply plug the 3.5mm jack into your computer, smartphone, or tablet and you're ready to talk.

### **Why are my Logitech headphones not working?**

Make sure the headset is not on mute. The mute light flashes when the mute has been activated. Try a different USB port on your computer. In your application and operating system, check the volume and microphone settings.

### **Do Logitech headsets have good mic quality?**

Overall, Logitech makes very good comfortable gaming headsets that are customizable and generally have well-performing microphones. They make a good mix of wired or wireless offerings, ranging from budget to premium headphones.

### **How much do Logitech headphones weigh?**

Logitech H110 Headphones, Weight: 0.08 kg.

### **How do wired headphones get power?**

Wired headphones get power from the device they are plugged into. Headphones are in fact, small speakers. When they are plugged into a device, they are powered through their audio jack that has an amplifier that transforms audio waves into electricity that powers headphones.

### **How do I sync my Logitech headset?**

Initiate pairing for the headset by pressing and holding for five seconds the Volume + and Next track/ Fast forward buttons on the headset. Next, initiate pairing for your Bluetooth device. (Consult the documentation that comes with your Bluetooth device.)

### **Do Logitech headphones need drivers?**

But your headset doesn't just need to have high-quality hardware, reliable cables, and connectors, or even the brand name of Logitech – to make sure your headset works properly, you need to have the right drivers.

### **What is the difference between a headset and a stereo headset?**

Mono vs. Stereo: Mono headsets have a single earpiece and cover only one ear. They are ideal for having a conversation while listening to your surroundings and communicating with others around you. Stereo headsets have two earpieces and cover both ears.

### **Do wired headsets sound better?**

Generally speaking, most wired headphones provide better sound quality than wireless. But with the latest advances in wireless technology, sound quality has improved quite a bit with wireless headphones.

### **How do you know if headphones are stereo?**

Generally, if a device has an output jack labeled EARPHONE it will be mono, while an output jack labeled HEADPHONE will be stereo.

### **Are stereo headphones good for gaming?**

Players of MOBA games like League of Legends and DOTA 2, or character action games, or really just about any single-player game will have no issue at all with a stereo headset. Just know you've got options, even if the headset you buy doesn't come with DTS or Dolby Atmos support.

### **Do wired headphones need to be charged?**

No Batteries/Charging: Except for active noise-canceling headphones, wired headphones don't need batteries. Simply plug your headphones or earphones into your audio source, and you're ready to rock.

### **How long do wired headphones last?**

There's no exact expiration date for headphones. How long headphones can last can range from a few months to decades, depending on many different factors including the brand, model, type of headphones, their usage,

maintenance, and storage.
