Lumens®

Lumens CamConnect Pro AI-Box1 CamConnect Processor

Product Information

Specifications:

- Product Name: CamConnect AI-Box1
- Interface: AI-Box1 IO Interface
- Compatibility: Works with supported microphones listed on Lumens website
- Connectivity: IP Address input
- Port: Varies based on microphone brand
- Features: Voice tracking, audio trigger level adjustment, camera control settings

Product Usage Instructions

Chapter 1: System Connection

System Connection:

Follow the instructions provided to establish the system connection for the AI-Box1.

AI-Box1 IO Interface:

Refer to the manual for details on the AI-Box1 IO Interface for proper setup and configuration.

Chapter 2: Operation Interface

Explore the operation interface to access various settings and functionalities of the CamConnect AI-Box1.

Chapter 3: Web Interface

Access the web interface as described in the manual to manage additional configurations and settings.

Chapter 4: Connect to video conferencing software

Follow the steps outlined in this chapter to connect the AI-Box1 to your preferred video conferencing software.

Chapter 5: Microphone Settings

Adjust microphone settings including IP address, port, voice tracking, audio trigger level, and camera control.

Chapter 6: Troubleshooting

Refer to this chapter for guidance on resolving common issues that may arise during product usage.

Chapter 7: System Message

Review system messages and any important notifications related to the CamConnect AI-Box1.

Frequently Asked Questions (FAQ):

- **Q: Where can I find the latest firmware and drivers for the CamConnect AI-Box1?**

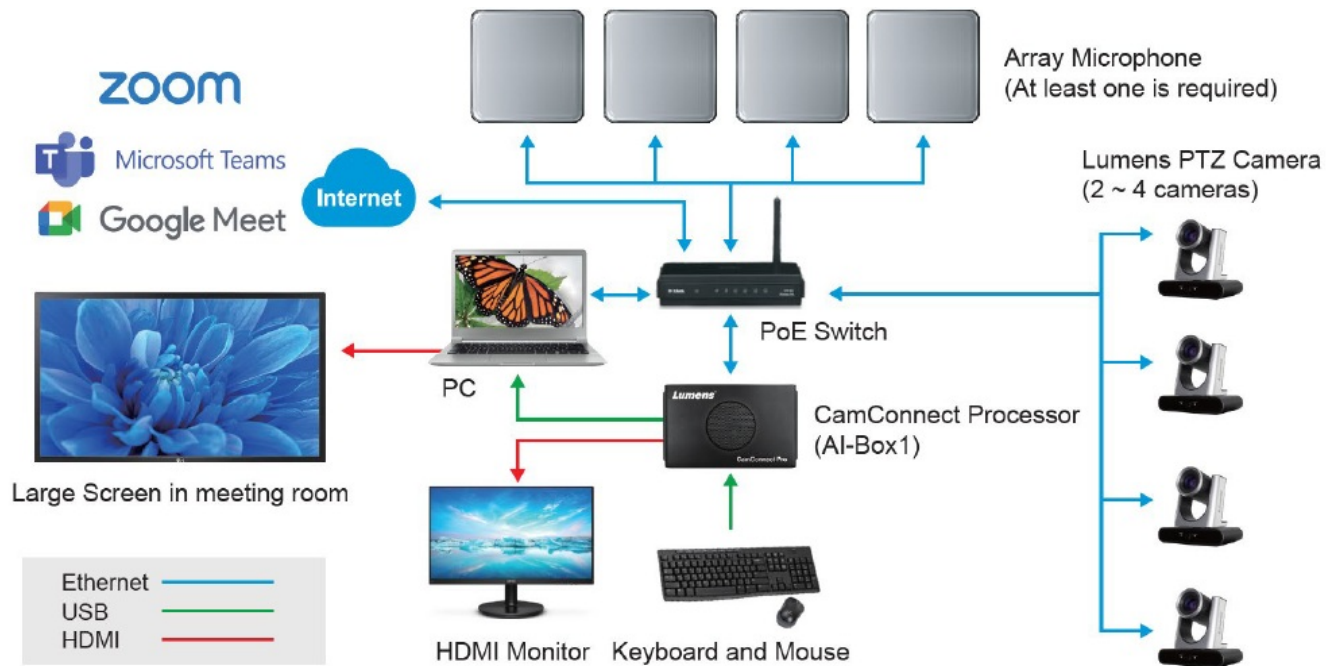

A: You can download the latest firmware and drivers from <https://www.MyLumens.com/support>

- **Q: How do I set up voice tracking on the AI-Box1?**

A: To set up voice tracking, enable the feature in the settings and adjust the audio trigger level based on your preferences.

System Connection

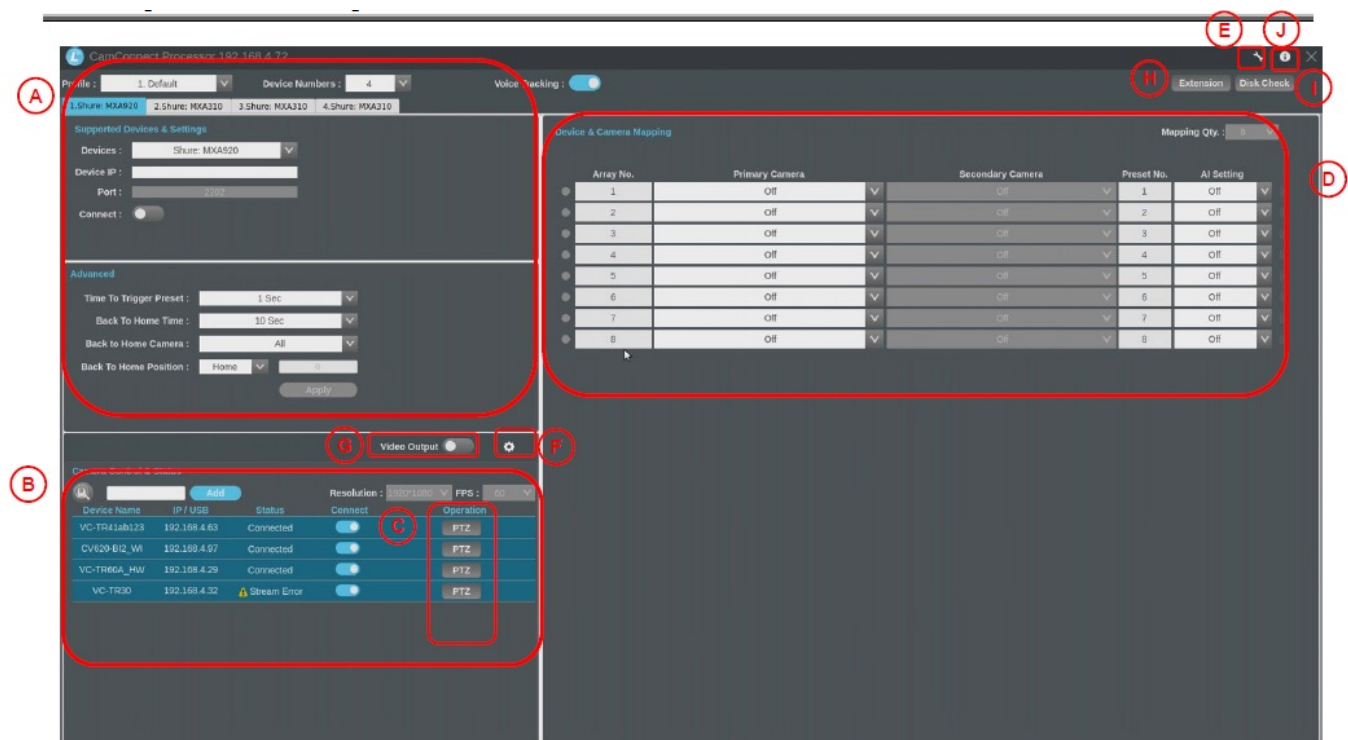

System Connection

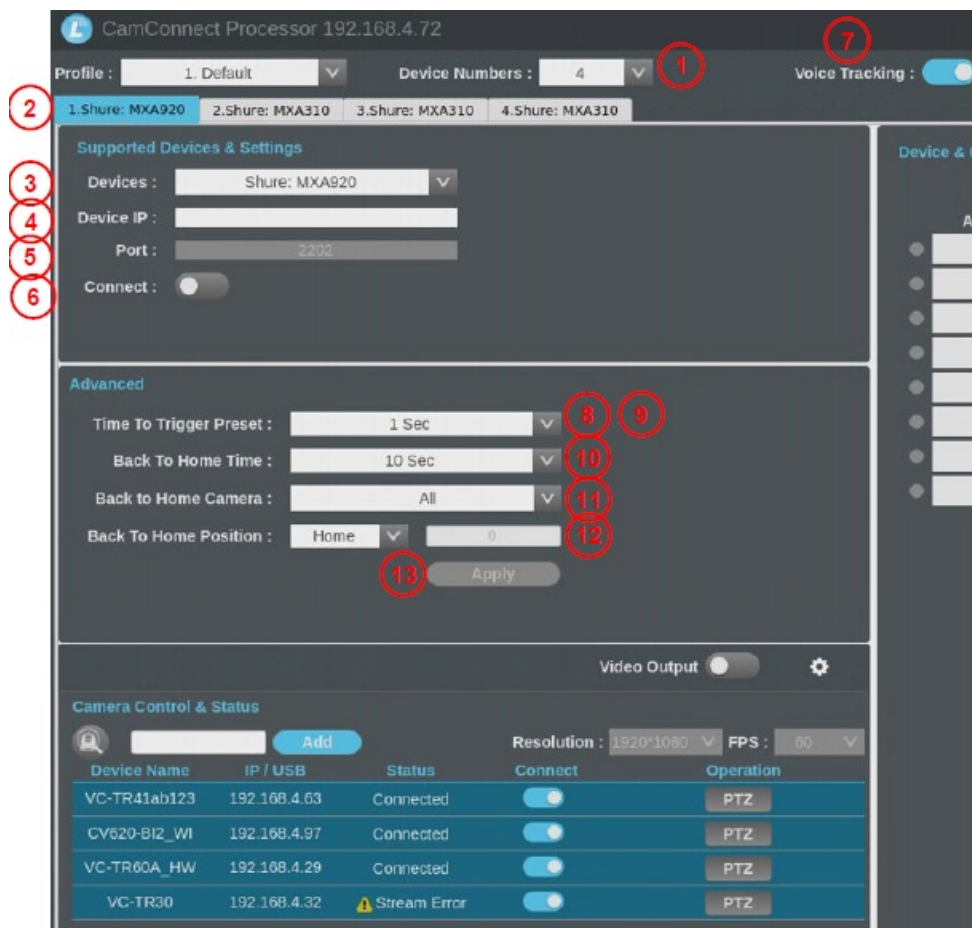

AI-Box1 IO Interface

Operation Interface

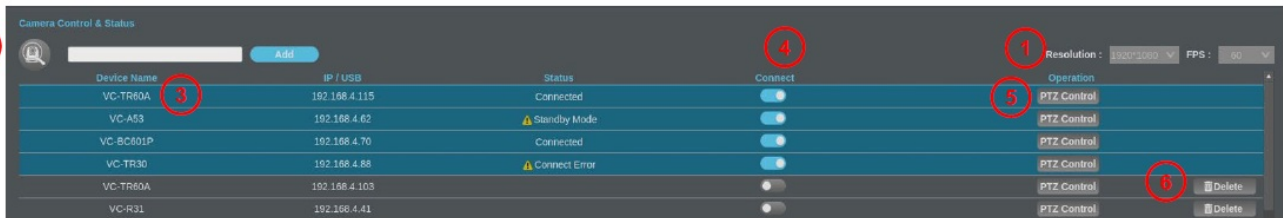

(A) Device Setting

No	Item	Function Descriptions
1	Device Number	Select the desired number of microphones to connect
2	Device List	Displays microphones in individual tabs
3	Devices	Select Microphone Device Note Please use a supported microphone (see Lumens website)

4	Device IP	Enter the IP address of the microphone
5	Port	<p>Displays the microphone's port</p> <ul style="list-style-type: none"> • Shure: 2202§ Shure: 2202 • Sennheiser: 45 • Sennheiser TCCM: 443 • Nureva: 8931 • Yamaha: 49280 • Audio-Technica : 17300 <p>Note Only Nureva allows customized PORT</p>
6	Connect	Enable/Disable setting mode
7	Voice Tracking	When enabled, signals received by a microphone triggers camera preset positions. When setting camera presets, it is important to disable this function.
8	Audio Trigger Level > dB	<p>Trigger when an audio source exceeds the selected dB value.</p> <ul style="list-style-type: none"> • Sennheiser:-90~0 (recommended -55) • Nureva:0~120 (recommended 40+) • Audio-Technica:0~60 (recommended 30) • Yamaha:0~126 (recommended 80+ for RM-CG / 70+ for RM-W)
9	Time To Trigger Preset	Audio Reception Delay Settings When a second sound trigger occurs, there will be a delay in triggering camera preset based on the configured duration in seconds.
10	Back To Home Time	Return the camera to its home position If there is no audio input, the camera will move to its home position after the set seconds.
11	Back to Home Camera	Select one camera or select all cameras to move to home position.
12	Back To Home Position	Camera will return to either Home position or a specific preset position.
13	Apply	Confirms changes to settings.

(B) Camera Control & Status

		
No	Item	Function Descriptions
1	Resolution / FPS	Resolution/FPS Settings (must match the camera output settings)
2	Refresh / Add	Click  to search for a camera on the network or manually enter the specified IP, and click [Add] to add it

		Note Please ensure that the camera and AI-Box1 are on the same network segment.
3	Device Name	Displays discovered cameras
4	Connect	Click to connect. Connected camera are highlighted in blue.
5	PTZ Control	Click to enable PTZ control Refer to <u>2.2.1 PTZ Control</u> for function description
6	Delete	Delete a camera from the list.

PTZ Control

No	Item	Function Descriptions
1	Preview window	Display the camera output
2	Mirror / Flip	Mirror or flip the image
3	Pan/Tilt/Home	Adjust the Pan/Tilt position of the camera Click [Home] button to return to the camera's central position
4	Preset setting	<ul style="list-style-type: none"> • Call Preset Position Click a number first and the  • Store Preset Position Click a number first and then Store
5	AF/MF	Switch to Auto/Manual camera lens focus
6	Zoom	Lens Zoom In / Out
7	Exit	Exit the PTZ Control page

(D)Device & Camera Mapping

When a microphone is connected, the camera will move to a preset position corresponding to the sound position detected by the microphone.

Device & Camera Mapping

Mapping Qty. : 8

2	3	4	5	6	7
Azimuth Angle	Primary Camera	Secondary Camera	Preset No.	AI Setting	
0 ~ 45	VC-TR41ab123(192.168.4.63)	VC-TR60A_HW(192.168.4.29)	1	Off	
45 ~ 90	Off	Off	2	Off	
90 ~ 135	Off	Off	3	Off	
135 ~ 180	Off	Off	4	Off	
180 ~ 225	Off	Off	5	Off	
225 ~ 270	Off	Off	6	Off

315 ~ 360	Off	Off	8	Off	

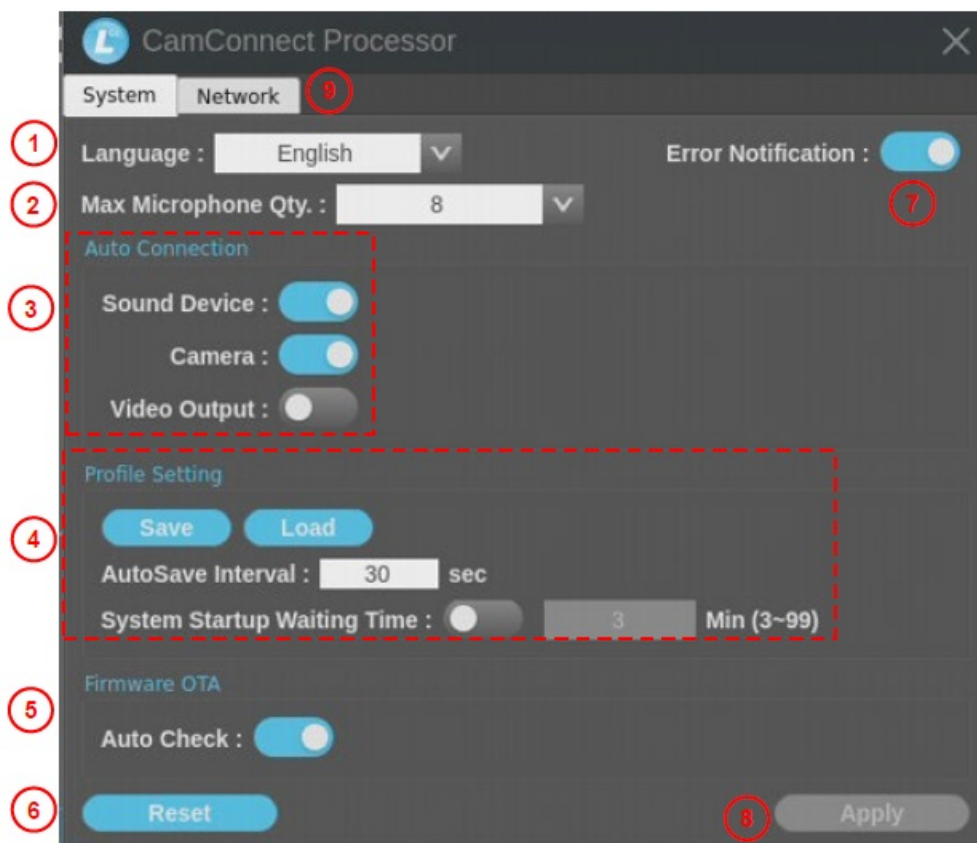

8

Mic. Array No.: 7

No	Item	Function Descriptions
1	Mapping Qty	Select the number of locations to be mapped. Up-to 128 presets supported. Note Shure MXA310/ MXA910/ MXA920/ Audio-Technica no supported Note Not supported with Shure MXA310/ MXA910/ MXA920and Audio-Technica microphones.
2	Indicator	A green light indicates that the microphone is detecting a sound.
3	Array No. Azimuth Angle	<ul style="list-style-type: none"> Array No.: Applicable to Shure / Audio-Technica devices Azimuth Angle: Applicable to Sennheiser, Nureva, and Yamaha devices. Angles can be manually adjusted
4	Primary Camera	Select a desired Primary camera from the dropdown menu. If unable to connect with a previously saved camera,  will be displayed.
5	Secondary Camera	Select the desired Secondary camera from the dropdown menu. When a camera is triggered to a preset position, and another preset position for the same camera is subsequently triggered, the Secondary camera will be the prior one to move to instead of the primary camera. Note: This feature is available only when Seamless Switching is enabled. If unable to connect with a previously saved camera,  will be displayed.
6	Preset No.	Select the preset position for the camera from the dropdown menu
7	AI Setting	Enable/Disable AI Tracking <input type="checkbox"/> Continuous Tracking The camera will continuously track the

		<p>individual, keeping them in the center position.</p> <ul style="list-style-type: none"> • Center Stage When the camera has been triggered to a preset position, the individual will be centered on the screen for 5 seconds before tracking stops.
8	Mic. Array No./Mic. Azimuth Angle	Displays current trigger position / angle information of the camera.

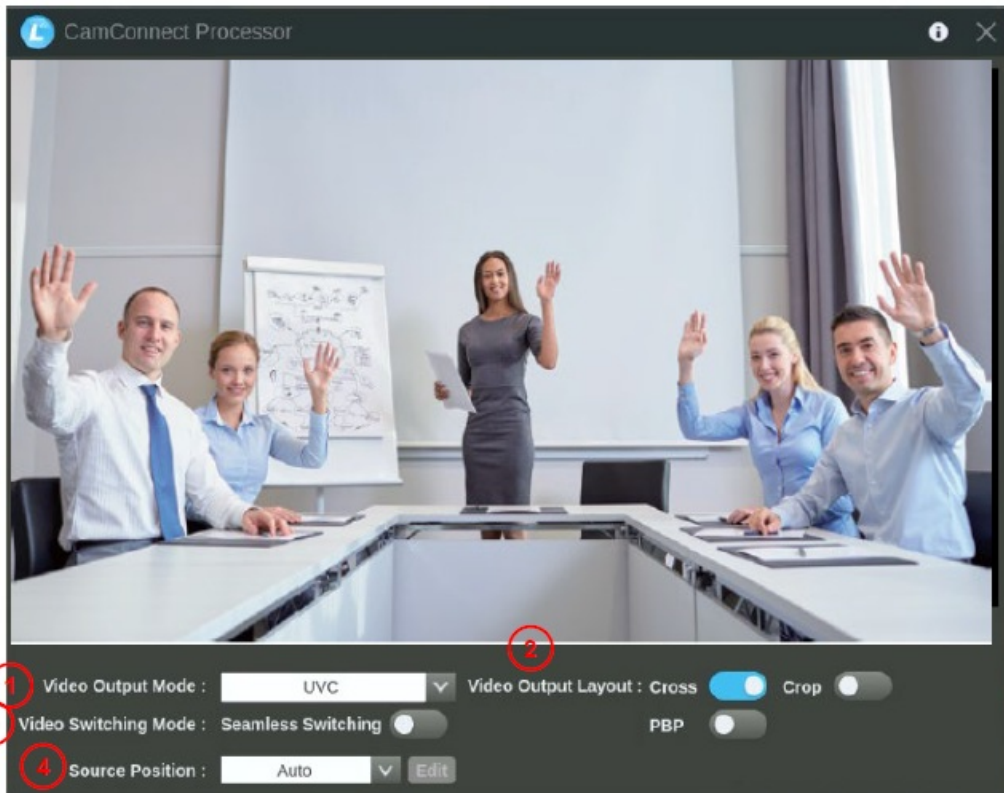

(E)System Settings

No	Item	Function Descriptions
1	Language	English
2	Max Microphone Qty.	Connect up-to 24 microphones.
3	Auto Connection	<p>Auto-connected items setting after AI-Box1 power is turned on.</p> <ul style="list-style-type: none"> • Sound Device • Camera • Video Output
4	Profile Setting	<ul style="list-style-type: none"> • Save/ Load: Save or Load the desired profile. • AutoSave Interval: Set the auto saving interval. • System Startup Waiting Time: Set startup waiting time. <p>After AI-Box1 powers on, it will automatically search for microphones and cameras. If the devices have a long boot-up time, AI-Box1 may not connect to the devices properly. To prevent this issue, please adjust the system waiting time based on the current environment and the boot-up time of the microphones and cameras.</p>
5	Firmware Auto Check	Automatically checks for firmware updates.

6	Reset	Resets the CamConnect Pro AI-Box1.
7	Error Notification	Turns on/off error message and notifications.
8	Apply	Confirm and apply settings.
9	Network	 <p>Choose either DHCP or Static. The address can be modified in Static mode. Click Apply to save.</p>

(F)Video Output Settings

No	Item	Function Descriptions
1	Video Output Mode	Set the Output Mode to either UVC, HDMI or UVC+HDMI
2	Video Output Layout	<p>Configure the layout of the video output according to the provided reference in section <u>2.5.1 Video Output Layout</u></p> <ul style="list-style-type: none"> • Cross: 4-split screen • PBP: Picture by Picture screen • Crop: Screen cropping function <p>Choose either Cross/PBP only</p>
3	Seamless Switching	The system is set up for single screen output, and camera switching is triggered by the microphone signal.

4	Source Position	<p>Switch the camera display position, select “[Custom]” and then click on “[Edit]” to enter the editing mode.</p> 
---	-----------------	---

Video Output Layout

	Connecting with 1 camera	Connecting with 2 cameras	Connecting with 3 cameras	Connecting with 4 camera

AI Director

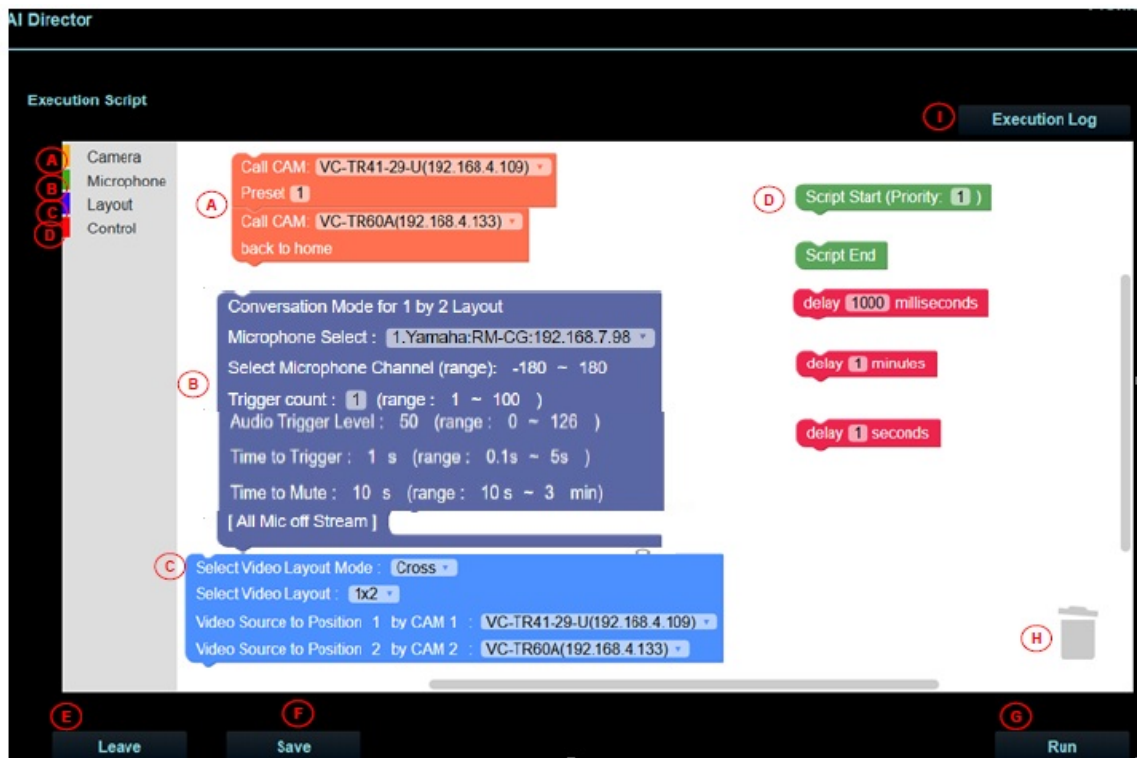

No	Item	Function Descriptions
1.	Conversation Mode	Pre-designed scripts are available for selection, allowing customers to use templates without customization. (More templates will be available in the future)
2	Presenter Mode	Not available for now.

3	Cruise Mode	Not available for now.
4	Customize	Create and fully customize your own 2 unique scripts.
5	Edit	Edit the contents of the script
6	Run / Stop	Start or stop the script running.
7	Execution Log	Display the log activity of AI Director.

Example of script creation

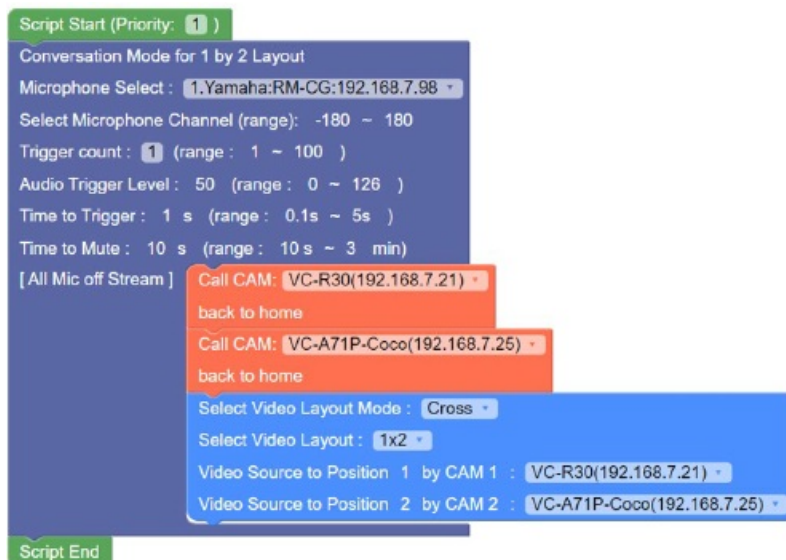

Script Edition: Conversation Mode Example

A. Camera: Assign commands for connected cameras to move to a preset position or return to their home position.

B. Microphone:

1. trigger count: Set the number of triggers (1~100) required to activate the camera.
2. All Mic off Stream: Define the action Cam Connect Pro will take when the microphone stops receiving sound.
For example, change the image layout scene or send commands to cameras.

(See example below)

C. Layout:

1. Video Layout: Cross / PBP
2. Video Layout of camera quantity: 1×1 / 1×2 / 1×3 / 2×2
3. Video source to specific position

D. Control

1. Script Start:

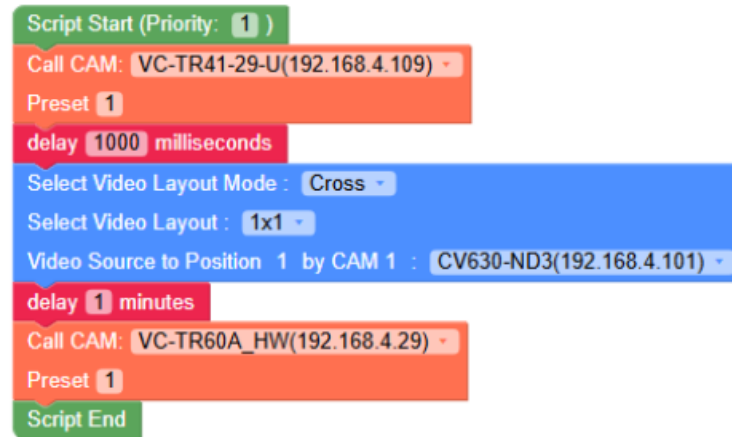

- This block must be placed at the beginning of any valid script.
- Set the priority to determine which script takes precedence when multiple scripts are active.

2. Script End: This block must be placed at the end of any valid script

3. Delay time: milliseconds / seconds / minutes

- Set the custom time and select the units.
- This block can be used as a stopover point in a script.

Example:

Note: A valid script must always include both the Script Start block and Script End block.

E. Leave: Exit the page

F. Save: Save the settings

G. Run: Start executing the script

H. Bin: Drag unwanted blocks to the bin icon to discard them.

I. Execution Log: Displays the activity log of the AI Director.

Script edition: Customize Mode example

The screenshot displays the 'Execution Script' interface. On the left, a sidebar contains three tabs: 'Camera' (A), 'Layout' (B), and 'Control' (C). The main workspace shows a script being edited. It includes blocks for 'Call A B Preset Cruise' (A), 'Select Cam Amount' (B), 'Video Source to Position 1 by CAM 1' (B), 'Reschedule In 1 seconds' (C), 'Script Start (Priority: 1)' (C), 'Script Stop' (C), 'Script End' (C), 'Repeat Count: 10' (C), 'Loop Script' (C), and 'delay' blocks (C). A 'Bin' icon (G) is located at the bottom right. At the bottom of the interface, there are three buttons: 'Leave' (D), 'Save' (E), and 'Run' (F). An 'Execution Log' tab (H) is visible in the top right corner.

A. Camera

Preset Cruise

Set how the preset positions of 2–3 cameras are triggered in sequence

Mode 1: Assign one preset position for each camera. Each camera moves to its preset position in order.

Mode 2: Assign two preset positions for each camera. Each camera move to their preset positions in order.

Configurable value:

1. Movement speed (degrees per second) for the camera when the preset position is triggered.
2. Delay time(seconds)

Camera settings

- Move to a specific preset position or home position
- Movement speed (degrees per second) for the camera when the preset position is triggered.

B. Layout

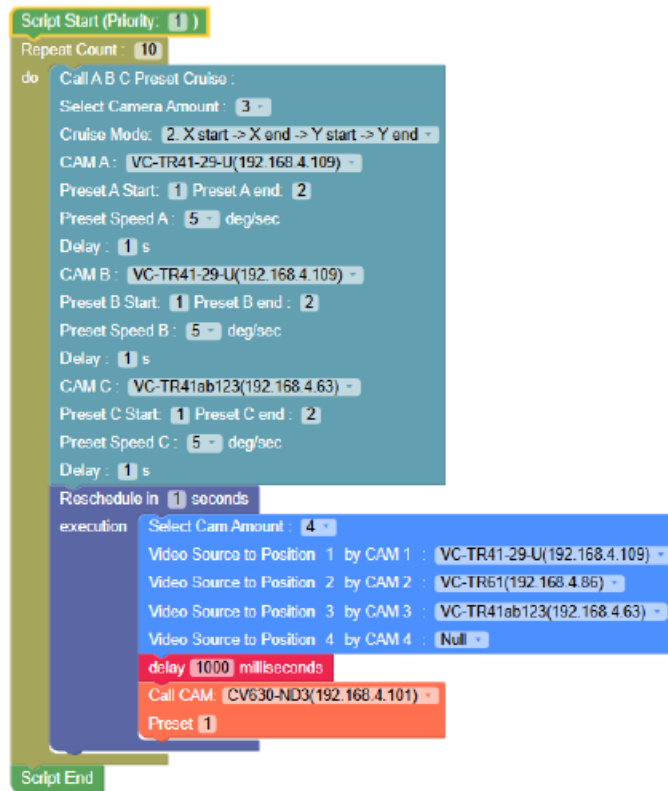

1. Layout: Cross / PBP
2. Video Layout for Camera Quantity: 1×1 / 1×2 / 1×3 / 2×2
3. Video source to specific position

C. Control

1. Script Start:
 - This block must be placed at the beginning of any valid script.
 - Set the priority to determine which script takes precedence when multiple script are active.
2. Script End: This block must be placed at the end of any valid script.
3. Delay time: milliseconds / seconds / minutes
 - Set the custom time and select the units.
 - This block can be used as a stopover point in a script.
4. Rescheduled in _ seconds: Specify how many seconds will be needed before triggering the next step.
5. Repeat Count: How many times the script will repeat
6. Script stop: Stops the script execution.
7. Loop Script: The script will repeat continuously.

Example:

Note: A valid script must always include both the Script Start and Script End blocks.

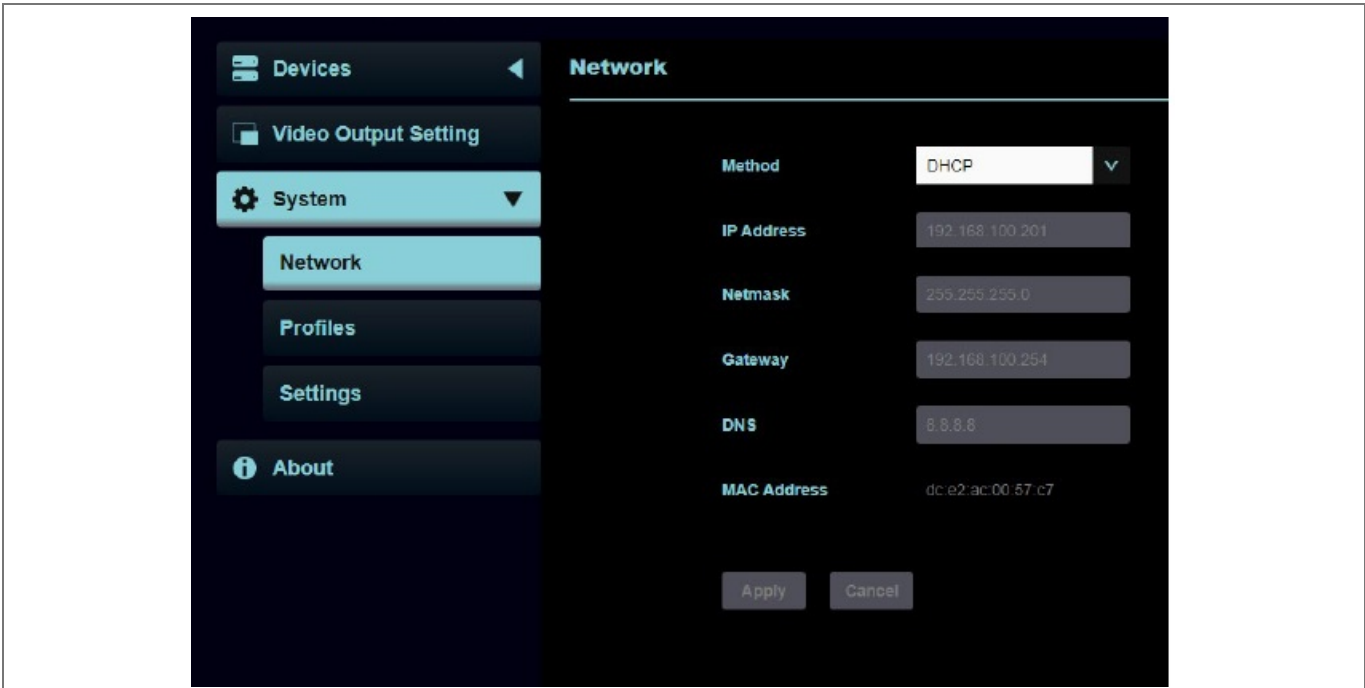

- D. Leave: Exit the page
- E. Save: Save the settings
- F. Run: Start executing the script
- G. Bin: Drag unwanted blocks to the bin icon to discard them.
- H. Execution Log: Display the activity log of AI Director.

Video Output Settings

No	Item	Function Descriptions
1	Video Output Mode	HDMI,UVC or HDMI+UVC
2	Seamless Switching	The system is set up for single screen output, and the camera switching is triggered by the microphone signal.
3	Layout Type	<p>Configure the layout of the video output according to the provided reference in section <u>2.5.1 Video Output Layout</u></p> <ul style="list-style-type: none"> • Cross: 4-split screen • PBP: Picture by Picture screen • Crop: Screen cropping function <p>Note Choose either Cross/PBP only</p>
4	Source Position	Custom / Auto
5	Layout	Choose how many camera images will be displayed on the screen. Position: Determine which camera source will be displayed in each position
6	Start Video Output	Click the button to start or stop video output.

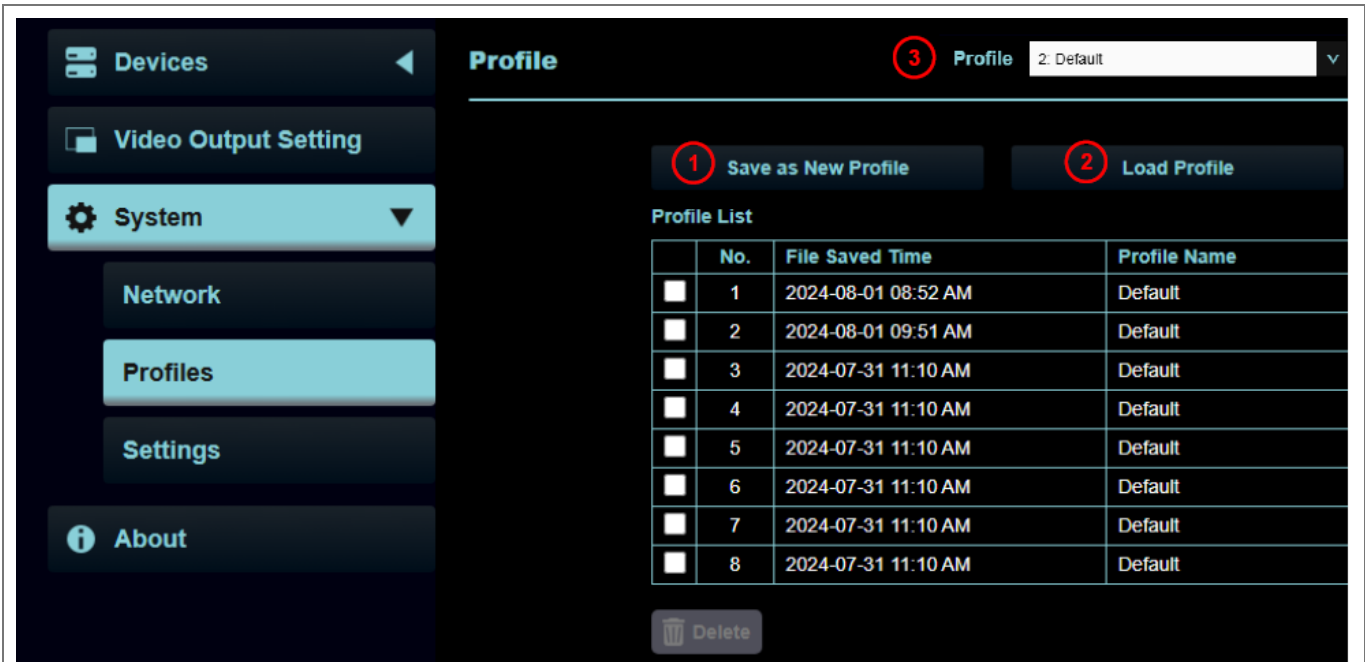

System- Network

Function Descriptions

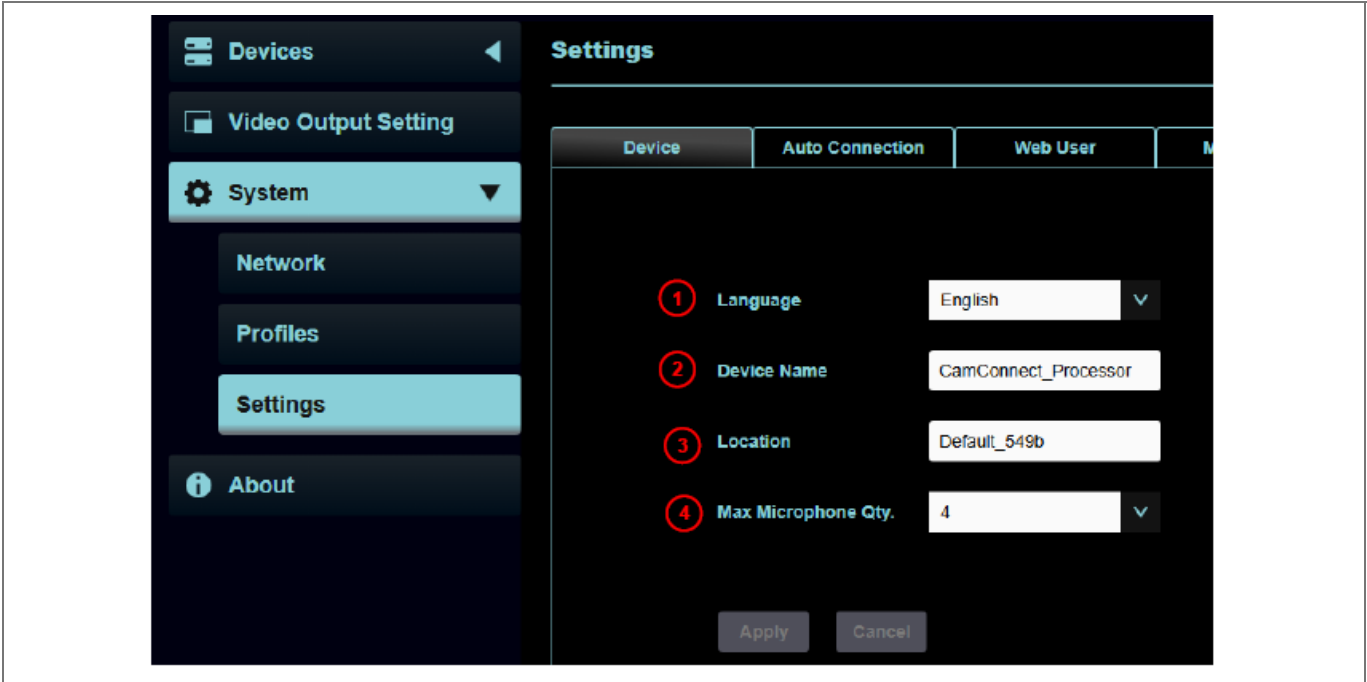

Ethernet Settings. When it is set to Static IP, settings can be modified. Once the settings are complete, click Apply.

System- Profile

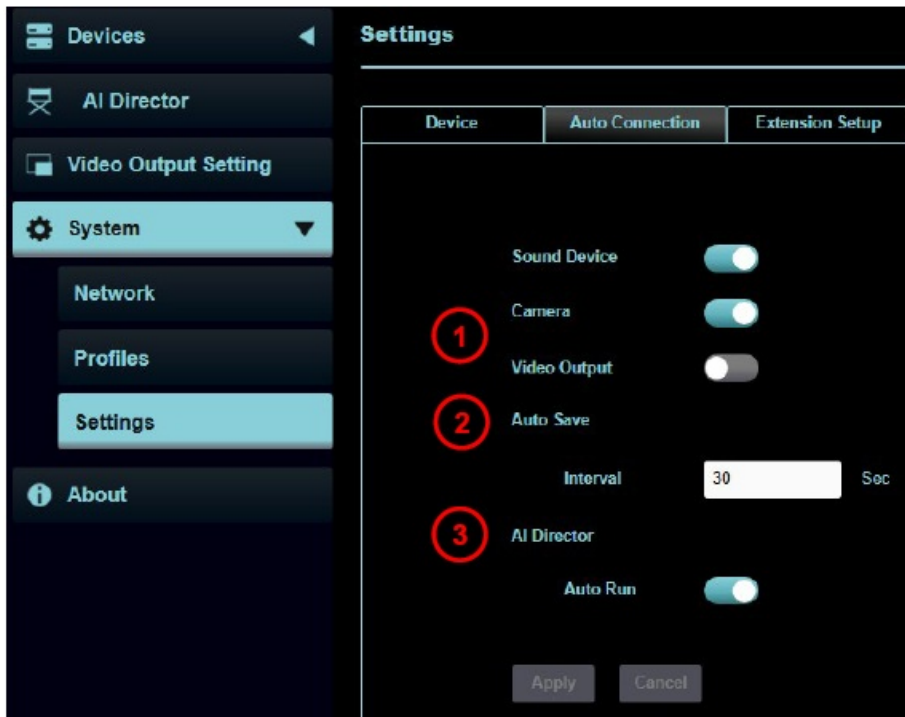

No	Item	Function Descriptions
1	Save as New Profile	Save the current settings as a new profile / layout template.
2	Load Profile	Load a saved profile / layout template.
3	Profile	The button will appear on every page and serves the same function as Load Profile.

System- Settings-Device

No	Item	Function Descriptions
1	Language	English
2	Device Name	Cam Connect_Processor
3	Location	Default_XXXX (The last four characters of the MAC address)
4	Max Microphone Qty.	4 / 8 / 16 / 24

System- Settings- Auto Connection

No	Item	Function Descriptions
1	Auto Connection	The microphone, camera and Video output can reconnect automatically after restarting the AI Box.
2	Auto Save	The profile can be saved automatically after a specific interval time.
3.	Auto Run	AI Director will be run automatically.

About

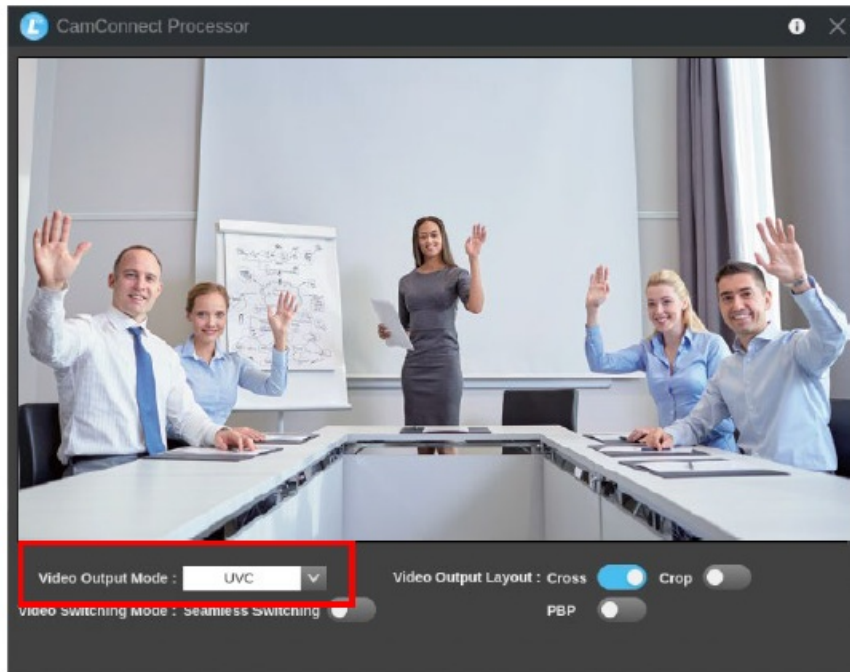

Function Descriptions

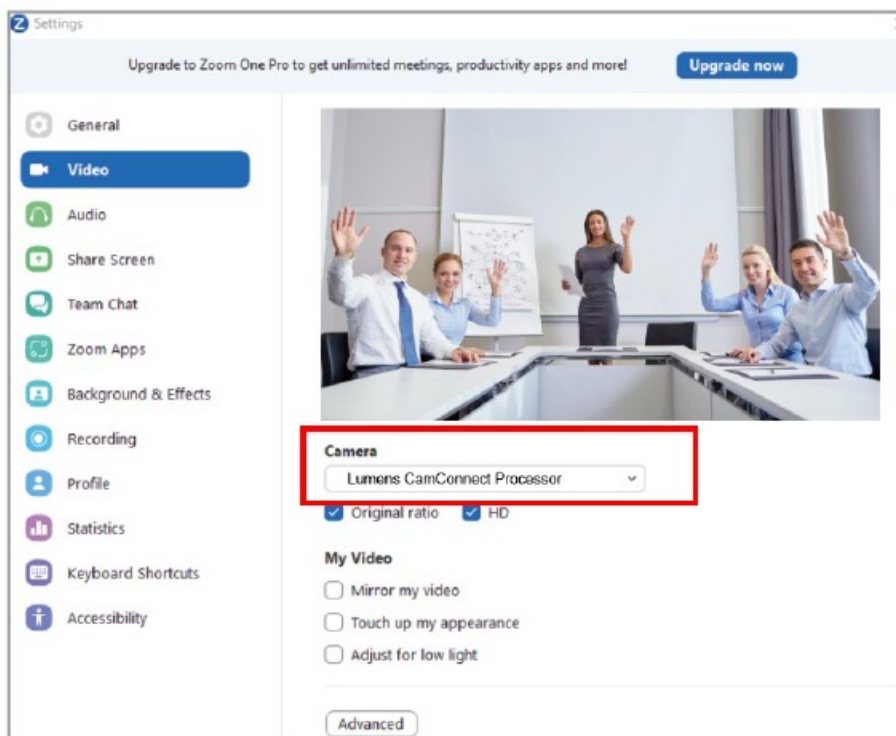

This window displays the version information of AI-Box1.
For technical support, please scan the QR code at the bottom right

Connect to video conferencing software

- Set the output mode of AI-Box1 to UVC or HDMI+UVC, then click the Video output button

- Launch software (such as Skype, Zoom or Microsoft Teams)
- Select Cam Connect as the video source
- Video Source Name: Lumens Cam Connect Processor

Microphone Settings

Please check the latest list of supported microphones on the Lumens website. Below are examples. Compatibility is not limited to these microphones.

Before installing AI-Box1, third-party microphone systems may require configuration.

Sennheiser

When using TCC2 with CamConnect, set and configure the channels on the Sennheiser Control Cockpit software first. By default, Sennheiser divide a space into 8 equal parts in a horizontal angle of view. They correspond to CamConnect Azimuth Angle 1 to 8.

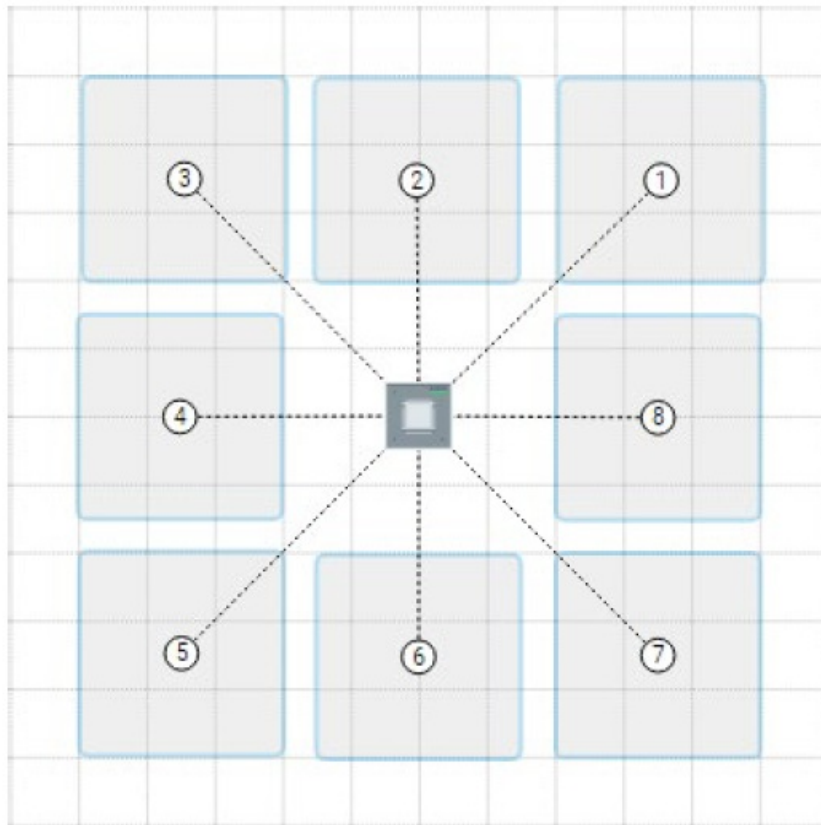

If a blocked area is enabled on the Sennheiser Control Cockpit software, the corresponding position of CamConnect will also be affected. Example: If the blocked area is set to 0° to 60°, the audio signal from 0° to 45° of CamConnect Array Azimuth 1 and 45° to 60° of Array Azimuth 2 will be ignored.

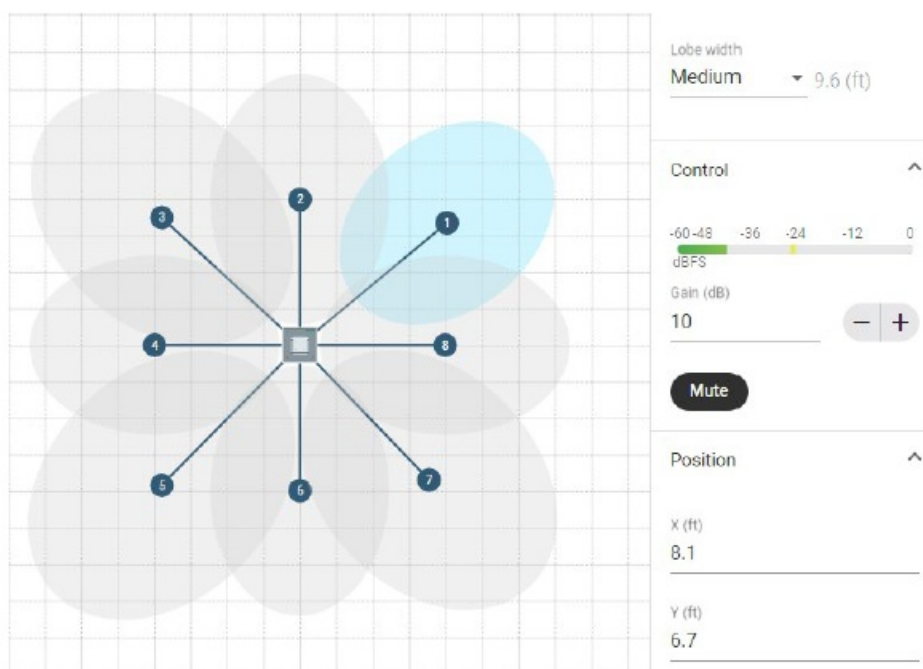

Shure

Suitable for large-area positioning when Shure Designer Automatic coverage is On.

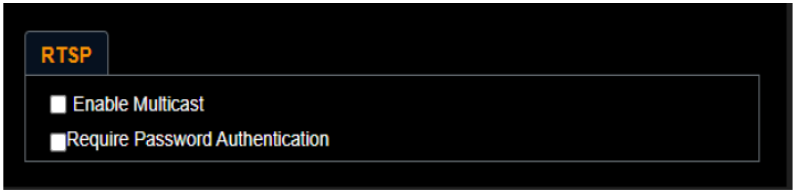

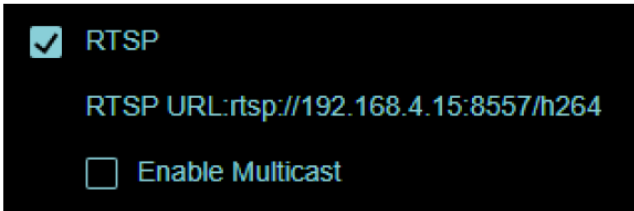

If more accurate positioning is required, disable Automatic coverage, adjust Gain value/Position manually and reduce the beamforming angle, to achieve accurate positioning.

Troubleshooting

This chapter describes problems you may encounter while using AI-Box1. If a problem still occurs, please contact your distributor or the service center.

NO	Problems	Solutions
1.	Unable to search camera devices	<ol style="list-style-type: none"> 1. Check the power supply of camera or PoE power supply is stable. 2. Make sure the cameras are on the same network as the Cam Connect AI-Box1. 3. Replace the cables and make sure they are not faulty
2.	The microphone fails to detect the position of a sound	Please confirm that the microphone device is in Connected status
3.	When using a Sennheiser microphone, there is no response at a specific angle	<ol style="list-style-type: none"> 1. Make sure the Azimuth Angle settings in the Cam Connect software include that angle position 2. Check the blocked zones in the Sennheiser Control Cockpit software. Refer to <u>5 Microphone Settings</u> for details.
4.	When setting camera preset positions, the camera moves when it hears a sound from another direction.	Please refer to <u>2.1 Device Setting</u> to disable voice tracking during the camera set-up process.
5.	Unable to connect camera.	<p>Please access the camera's web interface and go to the Network tab. Make sure Multicast is disabled. When Multicast is opened, the AI-Box1 cannot connect the camera.</p>  
6.	Cannot upgrade firmware by OTA.	<ol style="list-style-type: none"> 1. Please check if you are using static IP. <p>Turn to DHCP and try update again.</p>

System Message

No	Warning message	Action
1	Microphone cannot be found. Please check Microphone connection status and try to connect again.	Ensure that the microphone's port has been typed correctly and check if the IP address is on the same network as the AI-Box. You can also refer to the link below for more information about the setup method with compatible ceiling microphones. https://www.mylumens.com/en/Downloads/3id2=5&keyword=ai%20box&keyword2=&pageSize=10&ord=
2	Connection Loss.	The connection between the AI-box and the microphone has been lost. Please check if the microphone has been accidentally turned off or if there is another network issue. Refer to <u>3.1 Device – Microphone Setting</u> to check the microphone's status.
3	Camera connection failure	Check if the camera's resolution and FPS have been configured correctly with the AI Box. Access the camera's webpage to confirm its network connectivity. Refer to <u>3.2 Device – Camera List</u> to check resolution of AI-Box1.
