ISTQB AT LUMIFY WORK

Since 1997, Planit has established its reputation as the world leading provider of software testing training, sharing their extensive knowledge and experience through a comprehensive range of international best-practice training courses like ISTQB.

Lumify Work's software testing training courses are delivered in partnership with Planit.

4 days

WHY STUDY THIS COURSE

Want to develop your expertise in security testing? In this ISTQB® Security Tester course, you will learn how to plan, perform, and evaluate security tests from a variety of perspectives, including policy, risk, standards, requirements, and vulnerability.

By the conclusion of this course, you will be able to align security test activities with project lifecycle activities, and analyse effectiveness of risk assessment techniques. You will also be able to determine the best security test tools based on specified needs.

Included with this course:

- Comprehensive course manual
- Revision questions for each module
- Practice exam
- Pass guarantee: if you don't pass the exam first time, re-attend the course for free within 6 months
- 12 months' access to the online self-study course after attending this instructor-led course

Please note: The exam is not included in the course fee but can be purchased separately. Please contact us for a quote.

WHAT YOU'LL LEARN

Learning outcomes:

- Plan, perform, and evaluate security tests from a variety of perspectives
- Evaluate an existing security test suite and identify any additional security tests needed
- Analyse a given set of security policies and procedures, along with security test results, to determine effectiveness
- For a given project scenario, identify security test objectives based on functionality, technology attributes, and known vulnerabilities
- Analyse a given situation and determine which security testing approaches are most likely to succeed in that situation
- Identify areas where additional or enhanced security testing may be needed
- Evaluate effectiveness of security mechanisms
- Help the organisation build information security awareness
- Demonstrate the attacker mentality by discovering key information about a target, performing actions on a test application in a protected environment that a malicious person would perform, and understand how evidence of the attack could be deleted
- Analyse a given interim security test status report to determine the level of accuracy, understandability, and stakeholder appropriateness
- Analyse and document security test needs to be addressed by one or more tools

My instructor was great being able to put scenarios into real world instances that related to my specific situation.

I was made to feel welcome from the moment I arrived and the ability to sit as a group outside the classroom to discuss our situations and our goals was extremely valuable.

I learnt a lot and felt it was important that my goals by attending this course were met. Great job Lumify Work team.
