### **The reason and solving methods for the squeaky**

After a period of use, the screws and bolts may become loose, causing some chair parts to rub against each other irregularly and squeak. In this case, please use the driver to tighten loose parts, or lubricate the mechanism. Simply spray the oil directly on the chair mechanism and pat them dry, or remove the bolts and screws completely before adding any lubricant. If the chairs still squeak after adding lubricate, please try to lubricate them with light oil before putting them back in place.

We wish you have a wonderful time with LANDOMIA furniture.
