The Brandstand Difference

Liquid Spill Testing

Although Brandstand's Cubie products are not required to pass a UL liquid spill test, Brandstand goes above and beyond by developing products with additional safety margin.

For enhanced safety, the Cubie Product Line was designed for and successfully passed a UL spill test conducted by our ETL testing lab. This test involves directly pouring a 1-liter water and salt solution through the 110V plugs and USB. The units were then tested for dielectric conductivity on the surface of the unit. Additionally, the unit was required to perform to specification after the test was conducted. All products passed this testing without failure.

Surge Protection

All Brandstand Cubie products are tested to the UL 1449 Surge Protection Devices Standard, as well as UL962A for Furniture Power Distribution Units.

Qi Wireless Power

Brandstand is a member of the Wireless Power Consortium.

Pass-Through Power Plug

Pass-Through Plug

The pass-through power plug allows another device (i.e. lamp or alarm clock) to be plugged into the same wall outlet used by the Cubie Product.

Tamper Resistant Outlets

Our mission is to manufacture durable, safe and user-friendly products for the hotel guest room. We continually strive to improve our product line for the latest technology and safety standards.

In an effort to exceed current safety standards, CubieBlue, CubieTime, CubieTrio, CubieTrio+, CubieVia, CubieMod, Cubie-Pod, CubieFlip and CubieDash include Tamper Resistant Outlets.

Cycle Testing

Brandstand's lab conducted cycle testing on the 110V and USB connections.

The 110V outlets successfully passed 20,000 plug insertion and removal cycles without failure and before exhibiting pull force below specifications (>36 lbs)

The USB connector specification states that the USB connections are rated for 1,500 (one thousand five hundred) insertions without failure. Brandstand's test lab successfully conducted 15,000 (fifteen thousand) insertion cycles without failure.
