# Quick Start Guide

Model: TF4602WIFI

Let's get your new premium tower fan with Wi-Fi control ready to use!

## A Have you got everything?

When unpacking the appliance, make sure to check all parts in the package carefully so you don't miss any of the small bags.

1 The tower fan comes ready assembled.

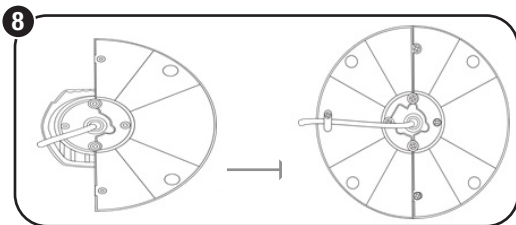

2 The base comes in two parts. You have to attach it to the body of the fan before use.

3 The tower fan can be operated either from the control panel at the front, or with the supplied remote control, or remotely using the in-built Wi-Fi module.

5 Keep in mind that this quick start guide only contains basic instructions to get you started.

6 For the full picture, please refer to the supplied instruction manual, which has comprehensive installation and usage instructions and important safety advice.

7 Keep the warranty certificate in a safe place for future reference.

## B Assembling the fan

The base of the tower fan comes in two parts, which fit easily together around the tower.

Lay the tower fan on a flat, stable surface for assembly of the base stand.

Unscrew the large nut at the base of the tower fan. Leave it dangling around the power cord.

First attach the front half, then the rear half of the base, leading the power cord through the hole in the middle. Push the two parts of the base stand firmly together, they will click audibly into place.

To tighten the base securely, reattach the large nut by turning it in clockwise direction.

Thread the power cord through the desired cut-out at the front or rear of the base.

Never use the fan until it is properly secured on the base. It must only be operated in an upright position.

Nearly done! For operation instructions, turn over the page ...

# Controlling the fan at home ...

**C**

You have three options how to operate your new tower fan:

When you're at home, you can use the buttons on the control panel to switch the fan on or off, select an operation mode, fan speed or oscillation, and set the timer.

Your settings will be illuminated on the LED display at the front of the unit.

Alternatively, use the remote control. The buttons control the same functions as the control panel.

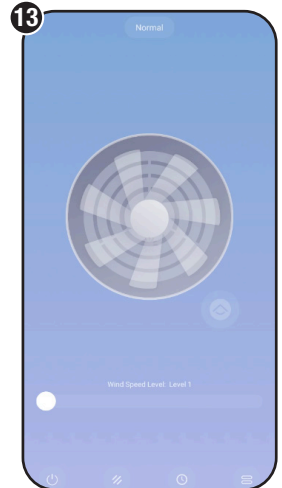

## **D** ... and remotely

Because of its in-built Wi-Fi technology, you can also control the fan remotely so that on your arrival at home the room temperature is comfortable.

All you need is an Android smartphone or Apple iPhone, and an internet connection with Wi-Fi network router set up at your home.

You must also have our STIRLING App installed or updated on your smartphone. This app is available from Google Play Store or Apple App Store.

After successfully installing (or updating) the app, you can name your device and control it with your phone—too easy!

## Give us a call

What? You mean this Quick Start Guide didn't have ALL the answers? The manual has more comprehensive instructions, or speak to us. Call our After Sales Support on 1300 112 534.

Well done, you made it! Now sit back and relax ...

your new premium tower fan is automatically covered by a 1 year warranty.
