

arlo™

Solar Panel
Quick Start Guide

Welcome

Thank you for choosing the Arlo Solar Panel.

Getting started is easy.

What's Included

Solar panel

Mount

Screws (3)

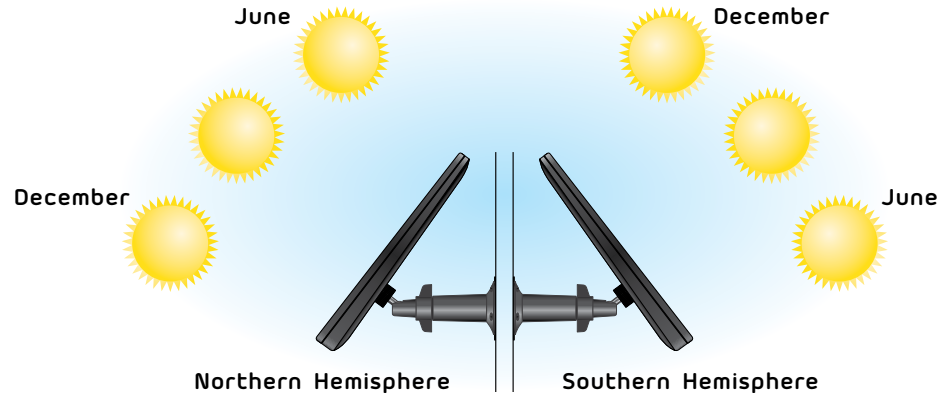

Quick Start Guide

Power cable

Position Your Arlo Solar Panel

The amount of energy that the solar panel can produce is affected by how much sunlight the solar panel receives, weather conditions, and dust or debris. A solar panel in the same location might produce a different amount of energy at noon in December than at noon in June.

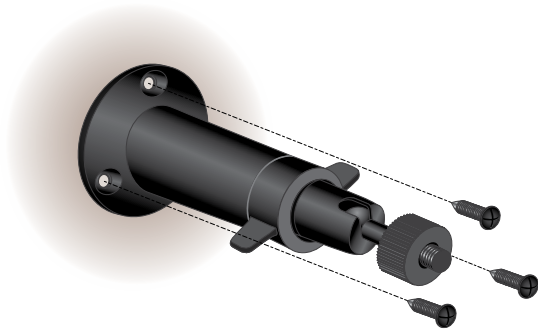

Similarly, the same panel might produce more energy in one geographic location and less in another. In both situations, the difference is based mainly on the amount of sunlight that the solar panel receives.

To optimize the effectiveness of your solar panel, do the following:

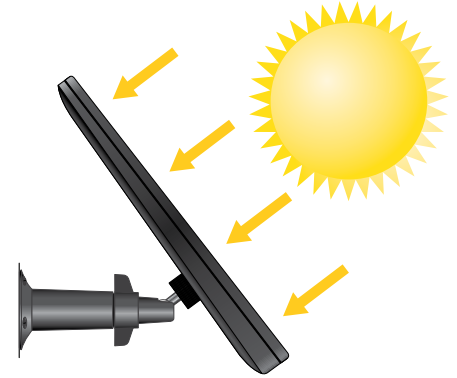

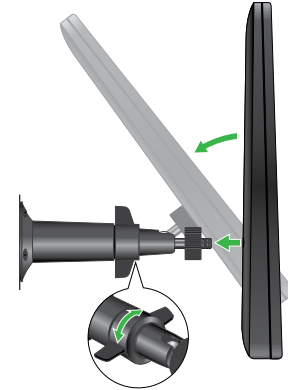

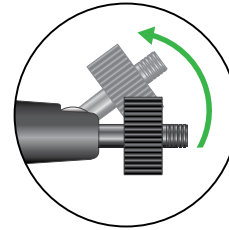

- Choose a location for your solar panel that gets the most sunlight throughout the year.
- Wipe the panel every few months to remove dust or debris that might affect the solar energy harvesting efficiency of the panel.

Install Your Solar Panel

1. Place the mount near your Arlo Pro or Arlo Go camera.
2. Secure the mount with the screws provided in the package.

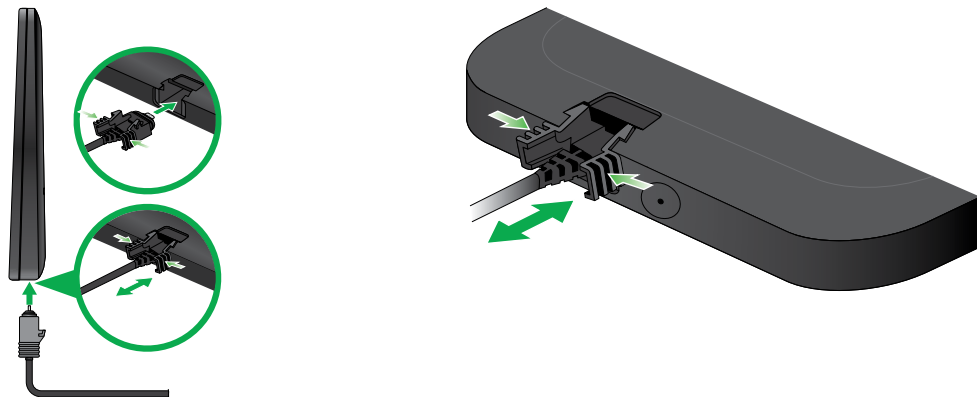

3. Attach your solar panel to the mount.
4. Adjust the angle of the solar panel on the mount to receive maximum sunlight.

Connect Your Solar Panel to Your Camera

1. Align the power cable end with the clips on the solar panel back.
2. Pinch the clip on the connector and insert the cable end into the port on the solar panel.

3. Connect the other end of the cable to your Arlo camera.

You're Done!

Congratulations! Your Arlo system is set up and ready to go.
