SAFETY INSTRUCTIONS

The installer must read the applicable safety instructions before attempting to operate or install the equipment.

DANGER

Indicates a potentially hazardous situation which, if not avoided, will result in death or serious injury.

WARNING

Indicates a potentially hazardous situation which, if not avoided, could result in death or serious injury.

CAUTION

Indicates a potentially hazardous situation which, if not avoided, can result in minor or moderate injury.

Warning, Caution

Prohibitive Action

Mandatory Action

DANGER

Wear a safety belt and hard hat when working on the antenna unit.

Serious injury or death can result if someone falls from the radar antenna mast.

WARNING

Do not open the equipment.

This equipment uses high voltage electricity which can shock, burn or cause serious injury. Only qualified personnel can work inside the equipment.

Construct a suitable service platform from which to install the antenna unit.

Serious injury or death can result if someone falls from the radar antenna mast.

Turn off the power at the mains switchboard before beginning the installation.

Fire, electrical shock or serious injury can result if the power is left on or is applied while the equipment is being installed.

Be sure that the power supply is compatible with the voltage rating of the equipment.

Connection of an incorrect power supply can cause fire or damage the equipment.

WARNING

Use only the specified power cable.

Fire or damage to the equipment can result if a different cable is used.

Do not install the units (other than the antenna unit) in a dusty environment, or one where the units may get wet from rain or water splash.

Dust or water in the units can result in fire, electrical shock, or damage to the equipment.

Attach protective earth securely to the ship's body.

The protective earth (grounding) is required for the AC power supply to prevent electrical shock.

WARNING

Radio Frequency Radiation Hazard

The radar antenna emits electromagnetic radio frequency (RF) energy which can be harmful, particularly to your eyes. Never look directly into the antenna aperture from a close distance while the radar is in operation or expose yourself to the transmitting antenna at a close distance. Distances at which RF radiation level of 100, 50 and 10 W/m² are given in the table below.

If the antenna unit is installed at a close distance in front of the wheel house, your administration may require halt of transmission within a certain sector of antenna revolution. See the installation manual for how to manage blind sectors.

CAUTION

Follow the instructions in this manual to ensure correct installation and connection with all related equipment.

Install the antenna in a location accessible only to authorized technicians, such as a radar mast, etc.

CAUTION

For FAR-2258/2268DS radars, turn the Processor Unit and the Power Supply Unit off before maintenance.

CAUTION

Observe the following compass safe distances to prevent deviation of a magnetic compass:

SYSTEM CONFIGURATION

NOTICE

IMO-type radar(s) must be interconnected to the following type approved sensors.

For other radar types, it is recommended to connect the following type approved sensors:

- EPFS meeting the requirements of the IMO resolution MSC.112(73).
- Gyrocompass (or equivalent devices) meeting the requirements of the IMO resolution A.424(XI).
- SDME meeting the requirements of IMO resolution MSC.96(72).

The radar may be interconnected via HUB-3000 to other FURUNO processing units having approved LAN ports.

Standard connection

Basic configuration is shown with solid line. For footnotes, see "Notes" on page x.

X-band (TR-UP), 12 kW/25 kW/600 W

X-band (TR-UP), 50 kW

S-band (TR-UP), 30 kW/250W)

S-band (TR-UP). 60 kW

X-band (TR-DOWN)

S-band (TR-DOWN)

Category of units

Antenna Unit: Exposed to weather

Other units: Protected from the weather

Notes

- 1) The gyrocompass must be type approved for compliance with IMO resolution A.424(XI) (and/or resolution A.821(19) for installation on HSC). The gyrocompass must also have an update rate that is adequate for the ship's rate of turn. The update rate must be better than 40 Hz (HSC) or 20 Hz (conventional vessel).
- 2) The EPFS must be type approved for compliance with IMO resolution MSC.112(73).
- 3) These monitors have been approved by the IMO, MU-190/MU-190HD for CAT 2 and CAT 2H, MU-231/MU-270W for CAT 1 and CAT 1H. If a different monitor is to be used on IMO vessels, its effective diameter must meet the Category requirements:
 - CAT 1 and CAT 1H: effective diameter 320 mm or higher
 - CAT 2 and CAT 2H: effective diameter 250 mm or higherFor installation, operation and viewing distance of other monitor, see its manuals.
For BB type, a monitor unit is prepared by user.
- 4) Characteristics of contact output for Alarm:
 - (Load current) 250 mA
 - (Polarity) Normally Open: 2 ports, Normally Close: 2 ports
 - Serial I/O for alarm is also possible, which complies with IEC 61162-1.
- 5) For configurations with 3 or more radars/ECDIS (FMD-3100/FMD-3200/FMD-3300) connected, connect via the HUB-3000. For 2 radars, HUB-100 can be used. Connection to a FMD (ECDIS) is not available for C-type radars.
- 6) For configurations with a VDR connected, connect via the HUB-3000. Connection to a VDR is not available for C-type radars.
- 7) Some antenna configurations do not have an in-built Performance Monitor. This type of antenna is not usable for IMO-type radars.
- 8) For connecting non-FURUNO ECDIS only. For connection of radars or plotters, the connection must be done at the radar antenna (or the transceiver unit) via the sub monitor connector.
- 9) Available on C-type and A/B/W-type radars with Radar Plotter functionality
- 10) Junction boxes are required for antenna cable length greater than 100 m (only for TR-UP radar of X-band). Max. cable length is 400 m.
- 11) Unavailable on IMO-type radars.

Interswitch connection

When multiple radars are used, connect units as shown in the figure below. This configuration lets each radar function as a standalone radar in case of HUB malfunction.

Note: This interswitch connection is NOT available between the different softwares (01.xx version and 50.xx version) even the connections between FAR-2xx8 radars.

Solid lines indicate standard supply equipment. Dashed lines indicate optional or local supply equipment.

Radar Type and Function Availability

This radar series is available in six specification types to meet the requirements of Authorities, and function availability depends on specification type.

- IMO: IMO compliant
- A: Near-IMO specifications
- B: Standard fishing specifications
- C: Advanced fishing specifications
- R: Russian specifications
- W: Washington Ferry specifications

Also, the software version has two main versions as shown below. Radar type availability depends on the software version (Available: ✓, Not available: –).

Software version	Available type					
	IMO	A	B	C	R	W
01.**	✓	✓	✓	–	✓	✓
50.**	✓	–	–	✓	–	–

Note 1: IMO-type radars with software version 01.** are different from those with software version 50.**.

Note 2: For FAR-2258 and 2268DS radars, the software version is with 50.** and the RP board is installed in the processor unit at factory in advance.

Note 3: If the software with version “01.**” is changed to the software with version “50.**”, the RP board in the processor unit is required and the software update of the RP board required as well.

The table below shows those functions which are limited to a specific radar type (Available: ✓, Not available: –). The menus which are not mentioned in the table below are available for all types. This manual provides descriptions for all functions in this radar series.
