Product information

Clean and healthy water

Plant and food remains and metabolic substances lead to a deterioration of the quality of the water in the aquarium. Good water quality is necessary for healthy fish and plants. This can be achieved with various filters and filter materials. The filters suck in the aquarium water and remove the pollution and waste materials with the filter material from the water.

Higher filter performance

By adding one further filter module to the filter ProCristal you can increase the filter performance and prolong the service life. The module comes ready for use. Depending on the height of the aquarium the filter can be extended by up to 3 modules.
