Introduction

GV-LPR2812-DL is capable of recognizing license plate numbers with its built-in deep learning LPR processor. GV-LPR2812-DL can compare captured license plates either with its on-the-edge standalone database, or the database stored at the GV-ASManager access control system. When there is a match, GV-LPR2812-DL can grant access for the vehicle by opening a gate or barrier.

GV-LPR2812-DL is a 2 MP, 10x zoom color network camera designed to recognize non-reflective and reflective license plates on vehicles traveling at up to 100 km/h (62 mph). Thanks to its motorized lens and intelligent IR, the camera's zoom and focus can be adjusted remotely and it can also automatically adjust its shutter speed to the scene to capture clear license plate images in low-light settings. It adheres to IP67 and IK10 standards and can withstand temperatures ranging from -20°C (-4°F) to 55°C (131°F) .
