- Extreme caution is necessary when any heater is used by or near children or those in need of assistance, especially whenever the heater is left operating and unattended.

- Do not operate any heater with a damaged plug or after the heater malfunctions, has been dropped or damaged in any manner. Discard heater, or return to a Venty service facility for examination and/or repair.
- Do not use this heater outdoors.
- This heater is not intended to use in bathrooms, laundry areas, and any similar humid indoor environment. Never locate the heater where it may fall into a bathtub or other water containers.
- Always plug this heater directly into a wall outlet/receptacle. Never use it with an extension cord or relocatable power tap (outlet/power strip). Plug the heater directly into a 120V – 240V outlet. Faulty wall outlet connections may cause the wall outlet to overheat. Be sure that the heater plugs tightly into the outlet before using.
- To disconnect the heater, turn controls off then remove the CozyPod from the outlet.
- Do not insert any objects into the ventilation or exhaust openings as this may cause electric shock or damage the heater.

CARE AND MAINTENANCE

Turn off the heater and unplug it from power when not in use. Use only a soft cloth to wipe the outer surfaces gently. Do not use any cleaning agents or detergents. Never immerse the heater in water. Be careful not to get the heating element and switches wet. To achieve the best performance, we suggest cleaning the heater at least once during the operating season or before storing it when it will not be in use for a long period. Maintenance For storage, you may leave the heater covered to protect it from dust. Store it in a cool, dry location and remove the power plug so that it does not bend while not in use.
Note that CozyPod is meant for smaller rooms, bedrooms, and offices. If placed in a large open space, Eco Mode may not reach your desired temperature but will blow heat constantly.
