Downloaded software QR code

2. Login software

(1) After the installation, open the "aicool market" software and allow the software to use the mobile phone "microphone" and "camera" according to the prompts, so as to easily bind the device in the back.

(2) Open the "My" in the lower right corner and enter the background Settings, open the upper left corner for login, Enter the email address and obtain the verification code to log in.

(3) Users can click "check in" in the background every day and exchange "energy points" at the gold coin exchange on the home page.

3. product function

After this AI translation software is bound with the Bluetooth headset, it will provide the following main functions:

(1) **Real-time translation:** support multilingual real-time translation, so that you do not need to worry about language barriers when communicating.

(2) **Voice to text:** Voice information received through Bluetooth headset can be converted into text in real time, which is convenient for viewing and recording.

(3) **Text to speech:** the translated text can be converted into voice playback, which is suitable for users with different listening habits.

(4) **Intelligent learning:** The software has the learning function, and can continuously optimize the translation effect according to users usage habits.

4. Functional use

Bluetooth headset to connect to the aicool market translation software

The aicool market translation software not only supports text translation, but also works with Bluetooth

The headset is connected to realize the real-time voice translation function, and the following is it

To connect to a Bluetooth headset:

(1) **Turn on the Bluetooth headset:** First, make sure that

your Bluetooth headset is on and connected.

(2) **Open the aicool market translation software:** open the aicool market translation software on your device, and enter my interface, click "bind a new device" and scan the "device binding code" on the home page of the instruction manual to connect(There is no need to scan the code for built-in devices) you can see that the device has been connected.

(3) **Intelligent assistant:** you want to know what content can click on the microphone to ask questions, wait a moment the intelligent AI small helper will answer for you.

(4) **Use real-time voice translation:** After a successful connection, you can use the real-time voice translation function of the AI library translation software. Just select the source language and the target language, and then press down the voice input button in the software, through the voice input through the Bluetooth headset or mobile phone, the software will automatically translate and output the text or voice of the target language automatically play.

(5) Translation mode selection:

Silent mode: no sound, only the translation results.

Headphone mode: Talk to the phone and listen to the translation sound from the headset.

External playback mode: press the speech, release the end recording and play the translation sound from the mobile phone.

Binaural mode: one person wears a headset, speaks to the headset, and plays the translated sound from the headset.

(6) **Display mode selection:**

Ordinary mode: show the original text first, and show the translation results below the original text. This mode is suitable for your own English practice, and it is a one-way viewing mode.

Interphone mode: the original text and the translation results are displayed in direction, convenient to watch the translation content with each other and avoid inaccurate communication.

Split screen mode: the first half screen displays the original text, and the second half screen shows the translation results.

(7) **Conference Assistant:**

It has the functions of meeting recording, recording to text, meeting summary and sorting, etc. Just need to open the software to connect the headset during the meeting, and tell the meeting time, place, participants, meeting outline, main content and software can automatically generate the summary, so as to truly free hands without typing and record the meeting content.

5. Common problems and solutions

(1) **Connection problem:** Ensure that the Bluetooth headset is on and in a pairing state, and check whether the Bluetooth phone is on.

(2) **Inaccurate translation:** to ensure that the input voice is clear and accurate.

(3) **Software lag:** close unnecessary applications in the background to ensure that the phone has enough running memory.

(4) **Volume adjustment:** adjust the volume in the mobile phone Settings, or check whether the Bluetooth headset has been adjusted to the appropriate volume.

(5) **Software updates:** Regularly check and install software updates to ensure the latest updates and security of product features.

(6) **Unable to translate:** When the headset connection status is normal or the software translation function cannot be used, please confirm whether the energy point in the background is sufficient. If the energy point is insufficient, please sign in to exchange the energy point or recharge the energy point before using it.

!!! **Special note: Bluetooth device can only be bound to one account, the next account is used, then the previous account must be untied!**
