

AN978: CP210x USB-to-UART API Specification

This document describes the API for the CP210x Manufacturing Library, used to configure CP210x devices, and the CP210x Runtime Library, used to operate the devices' GPIOs during runtime.

The Silicon Labs CP210x USB-to-UART bridges are devices that communicate over the Universal Serial Bus (USB) to perform Universal Asynchronous Receiver/Transmitter (UART) data transfers. These devices have many programmable options that can be configured via USB. These devices also often include flexible GPIO functions that can be configured and accessed via USB during runtime. Silicon Labs provides libraries that can be used to configure these devices and access their GPIOs.

KEY POINTS

- Silicon Labs provides public libraries to access all available features on CP210x devices.
- Use the CP210x Manufacturing library to configure a device's programmable settings.
- Use the CP210x Runtime library to control a device's GPIOs at runtime.

1. CP210x Host API Functions

Two DLL files can be used to interface with CP210x devices, `CP210xManufacturing.DLL`, which is responsible for reading and writing the device settings, and `CP210xRuntime.DLL`, which is responsible for interfacing with the device's GPIOs. The APIs for these DLLs are described in the following sections.

1.1 CP210xManufacturing.DLL

The CP210x Host API is provided as a means to facilitate production of customized CP210x devices. The API allows access to the CP210x device for retrieving and setting the VID, PID, product string, serial number, self-power attribute, maximum power consumption, and device version.

The CP210x Host API is provided in the form of a Windows Dynamic Link Library (DLL), `CP210xManufacturing.DLL`. The host interface DLL communicates with the bridge controller device via the provided device driver and the operating system's USB stack. The following is a list of the available host API functions:

<code>CP210x_GetNumDevices()</code>	Returns the number of CP210x devices connected.
<code>CP210x_GetProductString()</code>	Returns a descriptor from the registry for a CP210x USB device.
<code>CP210x_GetPartNumber()</code>	Returns the 1-byte Part Number of a CP210x device.
<code>CP210x_Open()</code>	Opens a CP210x device as a USB device and returns a handle.
<code>CP210x_Close()</code>	Closes a CP210x device handle.
<code>CP210x_SetVid()</code>	Sets the 2-byte vendor ID of a CP210x device.
<code>CP210x_SetPid()</code>	Sets the 2-byte product ID of a CP210x device.
<code>CP210x_SetManufacturerString()</code>	Sets the manufacturer description string of a CP210x device.
<code>CP210x_SetProductString()</code>	Sets the product description string of a CP210x device.
<code>CP210x_SetInterfaceString()</code>	Sets the interface string of a CP2105 device.
<code>CP210x_SetSerialNumber()</code>	Sets the serial number string of a CP210x device.
<code>CP210x_SetSelfPower()</code>	Sets the self-power attribute of a CP210x device.
<code>CP210x_SetMaxPower()</code>	Sets the maximum power consumption of a CP210x device.
<code>CP210x_SetFlushBufferConfig()</code>	Sets the flush buffer configuration of CP2104/5 devices.
<code>CP210x_SetDeviceMode()</code>	Sets the operating modes of both interfaces of a CP2105 device.
<code>CP210x_SetDeviceVersion()</code>	Sets version number of the CP210x device.
<code>CP210x_SetBaudRateConfig()</code>	Sets the baud rate configuration data of a CP210x device.
<code>CP210x_SetLockValue()</code>	Sets the 1-byte Lock Value of a CP210x device.
<code>CP210x_SetPortConfig()</code>	Sets the port configuration of a CP2101/2/3/4 device.
<code>CP210x_SetDualPortConfig()</code>	Sets the port configuration of a CP2105 device.
<code>CP210x_SetQuadPortConfig()</code>	Sets the port configuration of a CP2108 device.
<code>CP210x_SetConfig()</code>	Programs the entire configuration of a CP2102N device.

CP210x_GetDeviceManufacturerString()	Gets the manufacturer description string of a CP210x device.
CP210x_GetDeviceProductString()	Gets the product description string of a CP210x device.
CP210x_GetDeviceInterfaceString()	Gets the interface string of a CP2105 device.
CP210x_GetDeviceSerialNumber()	Gets the serial number string of a CP210x device.
CP210x_GetDeviceVid()	Gets the vendor ID of a CP210x device.
CP210x_GetDevicePid()	Gets the product ID of a CP210x device.
CP210x_GetSelfPower()	Gets the self-power attribute of a CP210x device.
CP210x_GetMaxPower()	Gets the maximum power consumption value of a CP210x device.
CP210x_GetFlushBufferConfig()	Gets the flush buffer configuration of CP2104/5 devices.
CP210x_GetDeviceMode()	Gets the operating modes of interfaces of a CP2105 device.
CP210x_GetDeviceVersion()	Gets the version number of a CP210x device.
CP210x_GetBaudRateConfig()	Gets the baud rate configuration data of a CP210x device.
CP210x_GetLockValue()	Gets the 1-byte Lock Value of a CP210x device.
CP210x_GetPortConfig()	Gets the port configuration of a CP210x device.
CP210x_GetDualPortConfig()	Gets the port configuration of a CP2105 device.
CP210x_GetQuadPortConfig()	Gets the port configuration of a CP2108 device.
CP210x_GetFirmwareVersion()	Gets the firmware version of a CP210x device.
CP210x_GetConfig()	Gets the entire configuration of a CP2102N device as a byte array.
CP210x_Reset()	Resets a CP210x device.

In general, the user initiates communication with the target CP210x device by making a call to `CP210x_GetNumDevices()`. This call returns the number of CP210x target devices. This number is used as a range when calling `CP210x_GetProductString()` to build a list of devices connected to the host machine.

A handle to the device must first be opened by a call to `CP210x_Open()` using an index determined from the call to `CP210x_GetNumDevices()`. The handle will be used for all subsequent accesses. When I/O operations are complete, the device handle is closed by a call to `CP210x_Close()`. When programming a CP2105 device to configure the mode, the following functions must be called in the following order:

```
CP210x_SetDeviceMode()
CP210x_SetDualPortConfig()
```

The remaining functions are provided to allow access to customizable values contained in the CP210x programmable area.

1.1.1 CP210x_GetNumDevices

Description : This function returns the number of CP210x devices connected to the host.

Supported Devices : CP2101, CP2102, CP2102N, CP2103, CP2104, CP2105, CP2108, CP2109

Prototype : CP210x_STATUS CP210x_GetNumDevices(uint32_t *lpdwNumDevices)

Parameters : 1. `lpdwNumDevices`—Pointer to a `uint32_t` that will contain the number of devices.

Return Value : CP210x_STATUS

- CP210x_SUCCESS
- CP210x_DEVICE_NOT_FOUND
- CP210x_INVALID_PARAMETER

1.1.2 CP210x_GetProductString

Description : This function returns a NULL-terminated serial number (S/N) string, product description string, or full path string for the device specified by an index passed in the DeviceNum parameter. The index of the first device is 0, and the index of the last device is the value (NumDevices) returned by CP210x_GetNumDevices() – 1.

Note: This function may return cached data, or data from the device driver. To access the data from the device directly, please use [1.1.24 CP210x_GetDeviceProductString](#).

Supported Devices : CP2101, CP2102, CP2102N, CP2103, CP2104, CP2105, CP2108, CP2109

Prototype : CP210x_STATUS CP210x_GetProductString(uint32_t dwDeviceIndex, void * lpvDeviceString, uint32_t dwFlags)

Parameters :

1. dwDeviceIndex—Index of the device for which the product description string, serial number, or full path is desired.
2. lpvDeviceString—Variable of type CP210x_DEVICE_STRING returning the NULL-terminated serial number, device description or full path string.
3. dwFlags—Flag that determines if DeviceString contains the product description, serial number, or full-path string. Available options:
 - CP210x_RETURN_SERIAL_NUMBER
 - CP210x_RETURN_DESCRIPTION
 - CP210x_RETURN_FULL_PATH

Return Value : CP210x_STATUS

- CP210x_SUCCESS
- CP210x_DEVICE_NOT_FOUND
- CP210x_INVALID_PARAMETER

1.1.3 CP210x_GetPartNumber

Description : Returns the 1-byte Part Number contained in a CP210x device.

Supported Devices : CP2101, CP2102, CP2102N, CP2103, CP2104, CP2105, CP2108, CP2109

Prototype : CP210x_STATUS CP210x_GetPartNumber(HANDLE cyHandle, uint8_t *lpbPartNum)

Parameters :

1. cyHandle —Handle to the device as returned by CP210x_Open()
2. lpbPartNum —Pointer to a 1-byte value returning the Part Number of the device. For example, a CP210x_CP2101_DEVICE denotes a CP2101 device, and a CP210x_CP2102_DEVICE denotes a CP2102 device.

Return Value : CP210x_STATUS

- CP210x_SUCCESS
- CP210x_INVALID_PARAMETER
- CP210x_INVALID_HANDLE
- CP210x_DEVICE_IO_FAILED

1.1.4 CP210x_Open

Description : Opens and returns a handle to a device using a device number determined by the number returned from `CP210x_GetNumDevices()`.

Supported Devices : CP2101, CP2102, CP2102N, CP2103, CP2104, CP2105, CP2108, CP2109

Prototype : `CP210x_STATUS CP210x_Open(uint32_t DeviceIndex, PHANDLE pcyHandle)`

Parameters :

1. `DeviceIndex` —Device index
2. `pcyHandle`—Pointer to a variable where the handle to the device will be stored. This handle is used for all subsequent accesses to the device.

Return Value : `CP210x_STATUS`

- `CP210x_SUCCESS`
- `CP210x_DEVICE_NOT_FOUND`
- `CP210x_INVALID_PARAMETER`

1.1.5 CP210x_Close

Description : Closes an open device handle.

Supported Devices : CP2101, CP2102, CP2102N, CP2103, CP2104, CP2105, CP2108, CP2109

Prototype : `CP210x_STATUS CP210x_Close(HANDLE cyHandle)`

Parameters :

1. `cyHandle`—Handle to the device as returned by `CP210x_Open()`

Return Value : `CP210x_STATUS`

- `CP210x_SUCCESS`
- `CP210x_INVALID_HANDLE`

1.1.6 CP210x_SetVid

Description : Sets the 2-byte Vendor ID field of the Device Descriptor of a CP210x device.

Supported Devices : CP2101, CP2102, CP2103, CP2104, CP2105, CP2108, CP2109

Prototype : `CP210x_STATUS CP210x_SetVid(HANDLE cyHandle, uint16_t Vid)`

Parameters :

1. `cyHandle`—Handle to the device as returned by `CP210x_Open()`
2. `Vid`—2-byte Vendor ID value.

Return Value : `CP210x_STATUS`

- `CP210x_SUCCESS`
- `CP210x_INVALID_HANDLE`
- `CP210x_DEVICE_IO_FAILED`

1.1.7 CP210x_SetPid

Description : Sets the 2-byte Product ID field of the Device Descriptor of a CP210x device.

Supported Devices : CP2101, CP2102, CP2103, CP2104, CP2105, CP2108, CP2109

Prototype : `CP210x_STATUS CP210x_SetPid(HANDLE cyHandle, uint16_t Pid)`

Parameters :

1. `cyHandle`—Handle to the device as returned by `CP210x_Open()`
2. `Pid`—2-byte Product ID value.

Return Value : `CP210x_STATUS`

- `CP210x_SUCCESS`
- `CP210x_INVALID_HANDLE`
- `CP210x_DEVICE_IO_FAILED`

1.1.8 CP210x_SetManufacturerString

Description : Sets the Manufacturer Description String of the String Descriptor of a CP210x device. If the string is not already in Unicode format, the function will convert the string to Unicode before committing it to programmable memory. The character size limit (in characters, not bytes), NOT including a NULL terminator, is CP210x_MAX_MANUFACTURER_STRLEN, CP2105_MAX_MANUFACTURER_STRLEN, or CP2108_MAX_MANUFACTURER_STRLEN.

Supported Devices : CP2101, CP2102, CP2103, CP2104, CP2105, CP2108, CP2109

Prototype : CP210x_STATUS CP210x_SetManufacturerString(HANDLE cyHandle, void *lpvManufacturerString, uint8_t bManufacturerStringLength, BOOL bConvertToUnicode = TRUE)

Parameters :

1. cyHandle—Handle to the device as returned by CP210x_Open()
2. lpvManufacturerString—Buffer containing the Manufacturer String value.
3. bManufacturerStringLength—Length of the string in characters (not bytes), NOT including a NULL terminator.
4. bConvertToUnicode—Boolean flag that tells the function if the string needs to be converted to Unicode. The flag is set to TRUE by default (i.e., the string is in ASCII format and needs to be converted to Unicode).

Return Value : CP210x_STATUS

- CP210x_SUCCESS
- CP210x_INVALID_PARAMETER
- CP210x_INVALID_HANDLE
- CP210x_DEVICE_IO_FAILED

1.1.9 CP210x_SetProductString

Description : Sets the Product Description String of the String Descriptor of a CP210x device. If the string is not already in Unicode format, the function will convert the string to Unicode before committing it to programmable memory. The character size limit (in characters, not bytes), NOT including a NULL terminator, is CP210x_MAX_PRODUCT_STRLEN, CP2105_MAX_PRODUCT_STRLEN, or CP2108_MAX_PRODUCT_STRLEN.

Supported Devices : CP2101, CP2102, CP2103, CP2104, CP2105, CP2108, CP2109

Prototype : CP210x_STATUS CP210x_SetProductString(HANDLE cyHandle, void *lpvProductString, uint8_t bProductStringLength, BOOL bConvertToUnicode = TRUE)

Parameters :

1. cyHandle—Handle to the device as returned by CP210x_Open()
2. lpvProductString—Buffer containing the Product String value.
3. bProductStringLength—Length of the string in characters (not bytes), NOT including a NULL terminator.
4. bConvertToUnicode—Boolean flag that tells the function if the string needs to be converted to Unicode. The flag is set to TRUE by default (i.e., the string is in ASCII format and needs to be converted to Unicode).

Return Value : CP210x_STATUS

- CP210x_SUCCESS
- CP210x_INVALID_PARAMETER
- CP210x_INVALID_HANDLE
- CP210x_DEVICE_IO_FAILED

1.1.10 CP210x_SetInterfaceString

Description : Sets the Interface String for the one of the interfaces available on the CP2105 or CP2108. If the string is not already in Unicode format, the function will convert the string to Unicode before committing it to programmable memory. The character size limit (in characters, not bytes), NOT including a NULL terminator, is `CP2105_MAX_INTERFACE_STRLEN` or `CP2108_MAX_INTERFACE_STRLEN`.

Supported Devices : CP2105, CP2108

Prototype : `CP210x_Status CP210x_SetInterfaceString(HANDLE cyHandle, uint8_t bInterfaceNumber, void * lpvInterfaceString, uint8_t bInterfaceStringLength, BOOL bConvertToUnicode)`

Parameters :

1. `cyHandle`—Handle to the device as returned by `CP210x_Open()`
2. `bInterfaceNumber`—Set to 0 for Enhanced Interface String, or 1 for Standard Interface String on the CP2105. 0-3 for the CP2108, which has 4 interfaces.
3. `lpvInterfaceString`—Buffer containing the Interface String.
4. `bInterfaceStringLength`—Length of the string in characters (not bytes), NOT including a NULL terminator.
5. `bConvertToUnicode`—Boolean flag that tells the function if the string needs to be converted to Unicode. The flag is set to TRUE by default (i.e., the string is in ASCII format and needs to be converted to Unicode).

Return Value : `CP210x_Status`

- `CP210x_SUCCESS`
- `CP210x_INVALID_PARAMETER`
- `CP210x_INVALID_HANDLE`
- `CP210x_DEVICE_IO_FAILED`

1.1.11 CP210x_SetSerialNumber

Description : Sets the Serial Number String of the String Descriptor of a CP210x device. If the string is not already in Unicode format, the function will convert the string to Unicode before committing it to programmable memory. The character size limit (in characters, not bytes), NOT including a NULL terminator, is `CP210x_MAX_SERIAL_STRLEN`.

Supported Devices : CP2101, CP2102, CP2103, CP2104, CP2105, CP2108, CP2109

Prototype : `CP210x_Status CP210x_SetSerialNumber(HANDLE cyHandle, void * lpvSerialNumberString, uint8_t bSerialNumberStringLength, BOOL bConvertToUnicode = TRUE)`

Parameters :

1. `cyHandle`—Handle to the device as returned by `CP210x_Open()`
2. `lpvSerialNumberString`—Buffer containing the Serial Number String value.
3. `bSerialNumberStringLength`—Length in characters (not bytes), NOT including a NULL terminator.
4. `bConvertToUnicode`—Boolean flag that tells the function if the string needs to be converted to Unicode. The flag is set to TRUE by default, i.e. the string is in ASCII format and needs to be converted to Unicode.

Return Value : `CP210x_Status`

- `CP210x_SUCCESS`
- `CP210x_INVALID_PARAMETER`
- `CP210x_INVALID_HANDLE`
- `CP210x_DEVICE_IO_FAILED`

1.1.12 CP210x_SetSelfPower

Description : Sets or clears the Self-Powered bit of the Power Attributes field of the Configuration Descriptor of a CP210x device.

Supported Devices : CP2101, CP2102, CP2103, CP2104, CP2105, CP2108, CP2109

Prototype : CP210x_STATUS CP210x_SetSelfPower(HANDLE cyHandle, BOOL bSelfPower)

Parameters :

1. cyHandle—Handle to the device as returned by CP210x_Open()
2. bSelfPower—Boolean flag where TRUE means set the Self-Powered bit, and FALSE means clear the Self-Powered bit.

Return Value : CP210x_STATUS

- CP210x_SUCCESS
- CP210x_INVALID_HANDLE
- CP210x_DEVICE_IO_FAILED

1.1.13 CP210x_SetMaxPower

Description : Sets the Max Power field of the Configuration Descriptor of a CP210x device.

Supported Devices : CP2101, CP2102, CP2103, CP2104, CP2105, CP2108, CP2109

Prototype : CP210x_STATUS CP210x_SetMaxPower(HANDLE cyHandle, uint8_t bMaxPower)

Parameters :

1. cyHandle—Handle to the device as returned by CP210x_Open()
2. bMaxPower—1-byte value representing the maximum power consumption of the CP210x USB device, expressed in 2 mA units.

Return Value : CP210x_STATUS

- CP210x_SUCCESS
- CP210x_INVALID_HANDLE
- CP210x_DEVICE_IO_FAILED

1.1.14 CP210x_SetFlushBufferConfig

Description : Sets the Flush Buffer configuration of a CP210x device.

Supported Devices : CP2104, CP2105, CP2108

Prototype : CP210x_STATUS CP210x_SetFlushBufferConfig(HANDLE cyHandle, uint16_t wFlushBufferConfig)

Parameters :

1. cyHandle—Handle to the device as returned by CP210x_Open()
2. wFlushBufferConfig—Set to determine which buffer(s) to flush (TX and/or RX) and upon which event (Open and/or Close). See the CP210xManufacturingDLL.h or [1.1.43 CP210x Manufacturing Library Type Definitions and Constants](#) for the bit definitions for this byte value.

Return Value : CP210x_STATUS

- CP210x_SUCCESS
- CP210x_INVALID_HANDLE
- CP210x_FUNCTION_NOT_SUPPORTED
- CP210x_DEVICE_NOT_FOUND

1.1.15 CP210x_SetDeviceMode

Description : Sets the operating mode (GPIO or Modem) or each Interface of a CP2105 device.

Supported Devices : CP2105

Prototype : CP210x_STATUS CP210x_SetDeviceMode(HANDLE cyHandle, uint8_t bDeviceModeECI, uint8_t bDeviceModeSCI)

Parameters :

1. cyHandle—Handle to the device as returned by CP210x_Open()
2. bDeviceModeECI—Set to 0 for modem mode for Enhanced interface
3. bDeviceModeSCI—Set to 0 for modem mode for Standard interface

Return Value : CP210x_STATUS

- CP210x_SUCCESS
- CP210x_INVALID_HANDLE
- CP210x_DEVICE_NOT_FOUND
- CP210x_FUNCTION_NOT_SUPPORTED

1.1.16 CP210x_SetDeviceVersion

Description : Sets the Device Release Version field of the Device Descriptor of a CP210x device.

Supported Devices : CP2101, CP2102, CP2103, CP2104, CP2105, CP2108, CP2109

Prototype : CP210x_STATUS CP210x_SetDeviceVersion(HANDLE cyHandle, uint16_t wVersion)

Parameters :

1. cyHandle—Handle to the device as returned by CP210x_Open()
2. wVersion—2-byte Device Release Version number in Binary-Coded Decimal (BCD) format with the upper two nibbles containing the two decimal digits of the major version and the lower two nibbles containing the two decimal digits of the minor version.

Return Value : CP210x_STATUS

- CP210x_SUCCESS
- CP210x_INVALID_HANDLE
- CP210x_DEVICE_IO_FAILED

1.1.17 CP210x_SetBaudRateConfig

Description : Sets the baud rate configuration data of a CP210x device.

Supported Devices : CP2102, CP2103

Prototype : CP210x_STATUS CP210x_SetBaudRateConfig(HANDLE cyHandle, PBAUD_CONFIG baudConfigData)

Parameters :

1. cyHandle—Handle to the device as returned by CP210x_Open()
2. baudConfigData—Pointer to a BAUD_CONFIG structure containing the Baud Config data to be set on the device.

Return Value : CP210x_STATUS

- CP210x_SUCCESS
- CP210x_INVALID_PARAMETER
- CP210x_INVALID_HANDLE
- CP210x_DEVICE_IO_FAILED

1.1.18 CP210x_SetLockValue

Description : Sets the 1-byte Lock Value of a CP210x device.

Note: Setting the lock value locks ALL customizable data and cannot be reset; only use this function to keep all customizable data on the part permanently.

Supported Devices : CP2102, CP2103, CP2104, CP2105, CP2108, CP2109

Prototype : CP210x_STATUS CP210x_SetLockValue(HANDLE cyHandle)

Parameters : 1. cyHandle—Handle to the device as returned by CP210x_Open()

Return Value : CP210x_STATUS

- CP210x_SUCCESS
- CP210x_INVALID_PARAMETER
- CP210x_INVALID_HANDLE
- CP210x_DEVICE_IO_FAILED

1.1.19 CP210x_SetPortConfig

Description : Sets the current port pin configuration from the CP210x device.

Supported Devices : CP2103, CP2104

Prototype : CP210x_STATUS CP210x_SetPortConfig(HANDLE cyHandle, PORT_CONFIG *PortConfig)

Parameters : 1. cyHandle—Handle to the device as returned by CP210x_Open()
2. PortConfig—Pointer to a PORT_CONFIG structure

Return Value : CP210x_STATUS

- CP210X_SUCCESS
- CP210X_INVALID_HANDLE
- CP210X_DEVICE_IO_FAILED
- CP210X_UNSUPPORTED_DEVICE

1.1.20 CP210x_SetDualPortConfig

Description : Sets the current port pin configuration from the CP2105 device. SetDeviceMode() must be called before calling this function.

Supported Devices : CP2105

Prototype : CP210x_STATUS CP210x_SetDualPortConfig(HANDLE cyHandle, DUAL_PORT_CONFIG *DualPortConfig)

Parameters : 1. cyHandle—Handle to the device as returned by CP210x_Open()
2. DualPortConfig—Pointer to a DUAL_PORT_CONFIG structure

Return Value : CP210x_STATUS

- CP210X_SUCCESS
- CP210X_INVALID_HANDLE
- CP210X_DEVICE_IO_FAILED
- CP210X_UNSUPPORTED_DEVICE

1.1.21 CP210x_SetQuadPortConfig

Description : Sets the current port pin configuration from the CP2108 device.

Supported Devices : CP2108

Prototype : CP210x_STATUS CP210x_SetQuadPortConfig(HANDLE cyHandle, QUAD_PORT_CONFIG *QuadPortConfig)

Parameters :

1. cyHandle—Handle to the device as returned by CP210x_Open()
2. QuadPortConfig—Pointer to a QUAD_PORT_CONFIG structure.

Return Value : CP210x_STATUS

- CP210x_SUCCESS
- CP210x_INVALID_HANDLE
- CP210x_DEVICE_IO_FAILED
- CP210x_UNSUPPORTED_DEVICE

1.1.22 CP210x_SetConfig

Description : Programs the device's configurable area with the given byte array.

Supported Devices : CP2102N

Prototype : CP210x_STATUS CP210x_SetConfig(HANDLE cyHandle, uint8_t *lpbConfig, uint16_t bLength)

Parameters :

1. cyHandle—Handle to the device as returned by CP210x_Open()
2. lpbConfig—A pointer to a byte array that holds the configuration to be programmed to the device (see [1.1.41 CP2102N Configuration Array lpbConfig](#) for details).
3. bLength—The length of the given byte array.

Return Value : CP210x_STATUS

- CP210x_SUCCESS
- CP210x_INVALID_HANDLE
- CP210x_DEVICE_IO_FAILED

1.1.23 CP210x_GetDeviceManufacturerString

Description : Returns the Manufacturer Description String of the String Descriptor of a CP210x device. If the Convert-ToASCII parameter is set, the string will be converted to ASCII format before being returned to the caller. The character size limit (in characters, not bytes), NOT including a NULL terminator, is CP210x_MAX_MANUFACTURER_STRLEN, CP2105_MAX_MANUFACTURER_STRLEN, or CP2108_MAX_MANUFACTURER_STRLEN.

Supported Devices : CP2101, CP2102, CP2102N, CP2103, CP2104, CP2105, CP2108, CP2109

Prototype : CP210x_STATUS CP210x_GetDeviceManufacturerString(HANDLE cyHandle, void *lpManufacturer, uint8_t *lpbLength, BOOL bConvertToASCII = TRUE)

Parameters :

1. cyHandle—Handle to the device as returned by CP210x_Open()
2. lpManufacturer—Pointer to a buffer returning the Manufacturer String value.
3. lpbLength—Pointer to a BYTE value returning the length of the string in characters (not bytes), NOT including a NULL terminator.
4. bConvertToASCII—Boolean flag that tells the function whether the string needs to be converted to ASCII before it is returned to the caller. The flag is set to TRUE by default (i.e., the caller is expecting the string in ASCII format).

Return Value : CP210x_STATUS

- CP210x_SUCCESS
- CP210x_INVALID_PARAMETER
- CP210x_INVALID_HANDLE
- CP210x_DEVICE_IO_FAILED

1.1.24 CP210x_GetDeviceProductString

Description : Returns the Product Description String of the String Descriptor of a CP210x device. If the Convert-ToASCII parameter is set, the string will be converted to ASCII format before being returned to the caller. The character size limit (in characters, not bytes), NOT including a NULL terminator, is CP210x_MAX_PRODUCT_STRLEN, CP2105_MAX_PRODUCT_STRLEN, CP2108_MAX_PRODUCT_STRLEN.

Supported Devices : CP2101, CP2102, CP2102N, CP2103, CP2104, CP2105, CP2108, CP2109

Prototype : CP210x_STATUS CP210x_GetDeviceProductString(HANDLE cyHandle, void *lpProduct, uint8_t *lpbLength, BOOL bConvertToASCII = TRUE)

Parameters :

1. cyHandle—Handle to the device as returned by CP210x_Open()
2. lpProduct—Pointer to a buffer returning the Product String value.
3. lpbLength—Pointer to a BYTE value returning the length of the string in characters (not bytes), NOT including a NULL terminator.
4. bConvertToASCII—Boolean flag that tells the function whether the string needs to be converted to ASCII before it is returned to the caller. The flag is set to TRUE by default (i.e., the caller is expecting the string in ASCII format).

Return Value : CP210x_STATUS

- CP210x_SUCCESS
- CP210x_INVALID_PARAMETER
- CP210x_INVALID_HANDLE
- CP210x_DEVICE_IO_FAILED

1.1.25 CP210x_GetDeviceInterfaceString

Description : Gets the specified interface string from a CP210x device. If the ConvertToASCII parameter is set, the string will be converted to ASCII format before being returned to the caller. The character size limit (in characters, not bytes), NOT including a NULL terminator, is CP2105_MAX_INTERFACE_STRLEN or CP2108_MAX_INTERFACE_STRLEN.

Supported Devices : CP2105, CP2108

Prototype : CP210x_STATUS CP210x_GetDeviceInterfaceString(HANDLE cyHandle, uint8_t bInterfaceNumber, void * lpInterface, uint8_t *lpbLength, BOOL bConvertToASCII)

Parameters :

1. cyHandle—Handle to the device as returned by CP210x_Open()
2. bInterfaceNumber —Set to 0 for Enhanced Interface.
3. lpInterface—Pointer to buffer returning the selected Interface String value.
4. lpbLength—Pointer to a `uint8_t` value returning the length of the string in characters (not bytes), NOT including a NULL terminator.
5. bConvertToASCII—Boolean flag that tells the function whether the string needs to be converted to ASCII before it is returned to the caller. The flag is set to TRUE by default (i.e., the caller is expecting the string in ASCII format).

Return Value : CP210x_STATUS

- CP210x_SUCCESS
- CP210x_INVALID_PARAMETER
- CP210x_INVALID_HANDLE
- CP210x_DEVICE_IO_FAILED

1.1.26 CP210x_GetDeviceSerialNumber

Description : Gets the Serial Number String of the String Descriptor of a CP210x device. If the ConvertToASCII parameter is set, the string will be converted to ASCII format before being returned to the caller. The character size limit (in characters, not bytes), NOT including a NULL terminator, is CP210x_MAX_SERIAL_STRLEN.

Supported Devices : CP2101, CP2102, CP2102N, CP2103, CP2104, CP2105, CP2108, CP2109

Prototype : CP210x_STATUS CP210x_GetDeviceSerialNumber(HANDLE cyHandle, void *lpSerialNumber, uint8_t *lpbLength, BOOL bConvertToASCII = TRUE)

Parameters :

1. cyHandle—Handle to the device as returned by CP210x_Open()
2. lpSerialNumber —Pointer to a buffer returning the Serial Number String value.
3. lpbLength—Pointer to a `uint8_t` value returning the length of the string in characters (not bytes), NOT including a NULL terminator.
4. bConvertToASCII—Boolean flag that tells the function whether the string needs to be converted to ASCII before it is returned to the caller. The flag is set to TRUE by default (i.e., the caller is expecting the string in ASCII format).

Return Value : CP210x_STATUS

- CP210x_SUCCESS
- CP210x_INVALID_PARAMETER
- CP210x_INVALID_HANDLE
- CP210x_DEVICE_IO_FAILED

1.1.27 CP210x_GetDeviceVid

Description : Returns the 2-byte Vendor ID field of the Device Descriptor of a CP210x device.

Supported Devices : CP2101, CP2102, CP2102N, CP2103, CP2104, CP2105, CP2108, CP2109

Prototype : CP210x_STATUS CP210x_GetDeviceVid(HANDLE cyHandle, uint16_t *lpwVid)

Parameters : 1. `cyHandle`—Handle to the device as returned by `CP210x_Open()`
2. `lpwVid`—Pointer to a 2-byte value that returns the Vendor ID of the CP210x device.

Return Value : CP210x_STATUS

- CP210x_SUCCESS
- CP210x_INVALID_PARAMETER
- CP210x_INVALID_HANDLE
- CP210x_DEVICE_IO_FAILED

1.1.28 CP210x_GetDevicePid

Description : Returns the 2-byte Product ID field of the Device Descriptor of a CP210x device.

Supported Devices : CP2101, CP2102, CP2102N, CP2103, CP2104, CP2105, CP2108, CP2109

Prototype : CP210x_STATUS CP210x_GetDevicePid(HANDLE cyHandle, uint16_t *lpwPid)

Parameters : 1. `cyHandle`—Handle to the device as returned by `CP210x_Open()`
2. `lpwPid`—Pointer to a 2-byte value that returns the Product ID of the CP210x device.

Return Value : CP210x_STATUS

- CP210x_SUCCESS
- CP210x_INVALID_PARAMETER
- CP210x_INVALID_HANDLE
- CP210x_DEVICE_IO_FAILED

1.1.29 CP210x_GetSelfPower

Description : Returns the state of the Self-Powered bit of the Power Attributes field of the Configuration Descriptor of a CP210x device.

Supported Devices : CP2101, CP2102, CP2102N, CP2103, CP2104, CP2105, CP2108, CP2109

Prototype : CP210x_STATUS CP210x_GetSelfPower(HANDLE cyHandle, LPBOOL lpbSelfPower)

Parameters : 1. `cyHandle`—Handle to the device as returned by `CP210x_Open()`
2. `lpbSelfPower`—Pointer to a boolean flag where TRUE means the Self-Powered bit is set, and FALSE means the Self-Powered bit is cleared.

Return Value : CP210x_STATUS

- CP210x_SUCCESS
- CP210x_INVALID_PARAMETER
- CP210x_INVALID_HANDLE
- CP210x_DEVICE_IO_FAILED

1.1.30 CP210x_GetMaxPower

Description : Returns the 1-byte Max Power field of the Configuration Descriptor of a CP210x device.

Supported Devices : CP2101, CP2102, CP2102N, CP2103, CP2104, CP2105, CP2108, CP2109

Prototype : CP210x_STATUS CP210x_GetMaxPower(HANDLE cyHandle, uint8_t *lpbPower)

Parameters :

1. cyHandle—Handle to the device as returned by CP210x_Open()
2. lpbPower—Pointer to a 1-byte value returning the Maximum power consumption of the CP210x USB device expressed in 2 mA units.

Return Value : CP210x_STATUS

- CP210x_SUCCESS
- CP210x_INVALID_PARAMETER
- CP210x_INVALID_HANDLE
- CP210x_DEVICE_IO_FAILED

1.1.31 CP210x_GetFlushBufferConfig

Description : Returns the flush buffer configuration of a CP210x device.

Supported Devices : CP2104, CP2105, CP2108

Prototype : CP210x_STATUS CP210x_GetFlushBufferConfig(HANDLE cyHandle, uint16_t *lpwFlushBufferConfig)

Parameters :

1. cyHandle—Handle to the device as returned by CP210x_Open()
2. lpwFlushBufferConfig—Pointer to the values which indicates which buffer(s) are flushed (TX and/or RX) and upon which event (Open and/or Close). See the CP210xManufacturingDLL.h or [1.1.43 CP210x Manufacturing Library Type Definitions and Constants](#) for the bit definitions for this byte value.

Return Value : CP210x_STATUS

- CP210x_SUCCESS
- CP210x_DEVICE_NOT_FOUND
- CP210x_INVALID_HANDLE
- CP210x_FUNCTION_NOT_SUPPORTED

1.1.32 CP210x_GetDeviceMode

Description : Gets the operating mode (GPIO or Modem) of each interface of a CP2105 device.

Supported Devices : CP2105

Prototype : CP210x_STATUS CP210x_GetDeviceMode(HANDLE cyHandle, uint8_t *lpbDeviceModeECI, uint8_t *lpbDeviceModeSCI)

Parameters :

1. cyHandle—Handle to the device as returned by CP210x_Open()
2. lpbDeviceModeECI—Pointer to a 1-byte value returning the 0 if interface is in Modem mode, or 1 if GPIO mode.
3. lpbDeviceModeSCI—Pointer to a 1-byte value returning the 0 if interface is in Modem mode, or 1 if GPIO mode.

Return Value : CP210x_STATUS

- CP210x_SUCCESS
- CP210x_INVALID_HANDLE
- CP210x_DEVICE_NOT_FOUND
- CP210x_FUNCTION_NOT_SUPPORTED

1.1.33 CP210x_GetBaudRateConfig

Description : Returns the baud rate configuration data of a CP210x device.

Supported Devices : CP2102, CP2103, CP2109

Prototype : CP210x_STATUS CP210x_GetBaudRateConfig(HANDLE cyHandle, PBAUD_CONFIG pBaudConfig)

Parameters :

1. `cyHandle`—Handle to the device as returned by `CP210x_Open()`
2. `pBaudConfig`—Pointer to a `BAUD_CONFIG` array containing structures returning the Baud Config data of the device.

Return Value : CP210x_STATUS

- CP210x_SUCCESS
- CP210x_INVALID_PARAMETER
- CP210x_INVALID_HANDLE
- CP210x_DEVICE_IO_FAILED

1.1.34 CP210x_GetLockValue

Description : Returns the 1-byte Lock Value of a CP210x device.

Supported Devices : CP2102, CP2103, CP2104, CP2105, CP2108

Prototype : CP210x_STATUS CP210x_GetLockValue(HANDLE cyHandle, uint8_t *lpbLockValue)

Parameters :

1. `cyHandle`—Handle to the device as returned by `CP210x_Open()`
2. `lpbLockValue`—Pointer to a 1-byte value returning the Lock Value of the device that the device is locked, and a 0x00 denotes that the device is unlocked.

Return Value : CP210x_STATUS

- CP210x_SUCCESS
- CP210x_INVALID_PARAMETER
- CP210x_INVALID_HANDLE
- CP210x_DEVICE_IO_FAILED

1.1.35 CP210x_GetPortConfig

Description : Gets the current port pin configuration from the CP210x device.

Supported Devices : CP2103, CP2104

Prototype : CP210x_STATUS CP210x_GetPortConfig(HANDLE cyHandle, PPORTE_CONFIG pPortConfig)

Parameters :

1. `cyHandle`—Handle to the device as returned by `CP210x_Open()`
2. `pPortConfig`—Pointer to a `PORT_CONFIG` structure.

Return Value : CP210x_STATUS

- CP210X_SUCCESS
- CP210X_INVALID_HANDLE
- CP210X_DEVICE_IO_FAILED
- CP210X_UNSUPPORTED_DEVICE

1.1.36 CP210x_GetDualPortConfig

Description : Gets the current port pin configuration from the CP2105 device.

Supported Devices : CP2105

Prototype : CP210x_STATUS CP210x_GetDualPortConfig(HANDLE cyHandle, DUAL_PORT_CONFIG* pDualPortConfig)

Parameters : 1. cyHandle—Handle to the device as returned by CP210x_Open()
2. pDualPortConfig—Pointer to a DUAL_PORT_CONFIG structure.

Return Value : CP210x_STATUS

- CP210X_SUCCESS
- CP210X_INVALID_HANDLE
- CP210X_DEVICE_IO_FAILED
- CP210X_UNSUPPORTED_DEVICE

1.1.37 CP210x_GetQuadPortConfig

Description : Gets the current port pin configuration from the CP2108 device.

Supported Devices : CP2108

Prototype : CP210x_STATUS CP210x_GetQuadPortConfig(HANDLE cyHandle, QUAD_PORT_CONFIG* pQuadPortConfig)

Parameters : 1. cyHandle—Handle to the device as returned by CP210x_Open()
2. pQuadPortConfig—Pointer to a QUAD_PORT_CONFIG structure.

Return Value : CP210x_STATUS

- CP210X_SUCCESS
- CP210X_INVALID_HANDLE
- CP210X_DEVICE_IO_FAILED
- CP210X_UNSUPPORTED_DEVICE

1.1.38 CP210x_GetFirmwareVersion

Description : Retrieves the firmware version from the device.

Supported Devices : CP2102N, CP2108

Prototype : CP210x_STATUS CP210x_GetFirmwareVersion(HANDLE cyHandle, pFirmware_t lpVersion)

Parameters : 1. cyHandle—Handle to the device as returned by CP210x_Open()
2. lpVersion—3-byte structure that indicates major, minor, and build version numbers.

Return Value : CP210x_STATUS

- CP210x_SUCCESS
- CP210x_INVALID_HANDLE
- CP210x_INVALID_PARAMETER
- CP210x_FUNCTION_NOT_SUPPORTED
- CP210x_DEVICE_IO_FAILED

1.1.39 CP210x_GetConfig

Description : Retrieves the current configuration from the device as a byte array.

Supported Devices : CP2102N

Prototype : CP210x_STATUS CP210x_GetConfig(HANDLE cyHandle, uint8_t *lpbConfig, uint16_t bLength)

Parameters :

1. `cyHandle`—Handle to the device as returned by `CP210x_Open()`
2. `lpbConfig`—A pointer to a byte array to hold the configuration (see [1.1.41 CP2102N Configuration Array `lpbConfig`](#) for details).
3. `bLength`—The length of the given byte array.

Return Value : CP210x_STATUS

- CP210x_SUCCESS
- CP210x_INVALID_HANDLE
- CP210x_DEVICE_IO_FAILED

1.1.40 CP210x_Reset

Description : Initiates a reset of the USB interface.

Note: There is a delay of ~1 second before the reset is initiated by the device firmware to give the application time to call `CP210x_Close()` to close the device handle. No further operations should be performed with the device until it resets, re-enumerates in Windows, and a new handle is opened.

Supported Devices : CP2101, CP2102, CP2102N, CP2103, CP2104, CP2105, CP2108, CP2109

Prototype : CP210x_STATUS CP210x_Reset(HANDLE cyHandle)

Parameters :

1. `cyHandle`—Handle to the device to close as returned by `CP210x_Open()`.

Return Value : CP210x_STATUS

- CP210x_SUCCESS
- CP210x_INVALID_HANDLE
- CP210x_DEVICE_IO_FAILED

1.1.41 CP2102N Configuration Array `1pbConfig`

Table 1.1 CP2102N Configuration Array Map on page 19 describes all bytefields within the CP2102N's configuration array. This array is used to program the device using the CP210x_SetConfig command and is retrieved by the CP210x_GetConfig command in the CP210x_Manufacturing.dll.

The table lists the following attributes for each entry in the array:

- **Property ID** : the ID used internally by Xpress Configurator for this field
- **Label** : the "User Friendly" label that is usually displayed in the Xpress Configurator UI
- **Length** : the length of the field in bytes or bits
- **Offset** : the offset of the field from the beginning of the configuration structure
- **Default Value** : the default value of the field
- **Type** : "User" if the property can be modified by the user, "-" otherwise

All rows that describe user-settable properties are identified by the term "User" in the **Type** column. Other properties (denoted by "-" and gray text) should be left at their default values.

Note: The last entry in the table is the Fletcher Checksum of the rest of the array. Details on how to calculate this value are provided in section 1.1.42 Fletcher Checksum. This checksum property must be updated if any other properties in the configuration array are modified from their default values.

Table 1.1. CP2102N Configuration Array Map

Property ID	Label	Length	Offset	Default Value	Type
cp2102n.configSize	Config Size	2 B	0	0x02A6	-

1.1.42 Fletcher Checksum

The last property in [1.1.41 CP2102N Configuration Array `lpbConfig`](#) holds a 16-bit "Fletcher" checksum of the other content in the array. This checksum must be recalculated to reflect any changes made elsewhere in the configuration array.

For reference, Wikipedia provides a [C implementation for the Fletcher checksum](#) as follows:

```
// Taken from Wikipedia https://en.wikipedia.org/wiki/Fletcher%27s_checksum
// Must use generic pointer since function is called on XDATA and CODE spaces.
uint16_t fletcher16(uint8_t *dataIn, uint16_t bytes)
{
    uint16_t sum1 = 0xff, sum2 = 0xff;
    uint16_t tlen;

    while (bytes) {
        tlen = bytes >= 20 ? 20 : bytes;
        bytes -= tlen;
        do {
            sum2 += sum1 += *dataIn++;
        } while (--tlen);
        sum1 = (sum1 & 0xff) + (sum1 >> 8);
        sum2 = (sum2 & 0xff) + (sum2 >> 8);
    }
    /* Second reduction step to reduce sums to 8 bits */
    sum1 = (sum1 & 0xff) + (sum1 >> 8);
    sum2 = (sum2 & 0xff) + (sum2 >> 8);
    return sum2 << 8 | sum1;
}
```

1.1.43 CP210x Manufacturing Library Type Definitions and Constants

This section lists type definitions from C/C++ Header File CP210xManufacturingDLL.h. For a complete listing, function prototypes, and other API information for the CP210x Manufacturing DLL, please refer to CP210xManufacturingDLL.h.

```

/// @ref CP210x_GetProductString() function flags

1.2 CP210xRuntime.DLL

The CP210x Runtime API provides access to the GPIO port latch, and is meant for distribution with the product containing a CP210x device.

CP210xRT_GetNumDevices()	Determines the number of CP210x devices connected to the system.
CP210xRT_Open()	Opens and returns a handle to a device using a device index determined by the number returned from CP210xRT_GetNumDevices().
CP210xRT_Close()	Closes an open handle to the device.
CP210xRT_ReadLatch()	Returns the GPIO port latch of a CP210x device.
CP210xRT_WriteLatch()	Sets the GPIO port latch of a CP210x device.
CP210xRT_GetPartNumber()	Returns the 1-byte Part Number of a CP210x device.
CP210xRT_GetProductString()	Returns the product string programmed to the device.
CP210xRT_GetDeviceSerialNumber()	Returns the serial number programmed to the device.
CP210xRT_GetDeviceInterfaceString()	Returns the interface string programmed to the device.
CP210xRT_GetReceiverMaxTimeout()	Reads and returns the Receiver Max Timeout directly from the device.
CP210xRT_SetReceiverMaxTimeout()	Sets the Receiver Max Timeout directly to the device.

Typically, the user initiates communication with the target CP210x device by opening a handle to a COM port using `CreateFile()` (See AN197: *Serial Communication Guide for CP210x*). The handle returned allows the user to call the API functions listed above. Each of these functions are described in the following sections. Type definitions and constants are defined in the file `CP210xRuntimeDLL.h`.

Note: Functions calls into this API are blocked until completed. This can take several milliseconds depending on USB traffic.

1.2.1 CP210xRT_GetNumDevices

Description : Determines the number of CP210x devices connected to the system.

Supported Devices : CP2101, CP2102, CP2102N, CP2103, CP2104, CP2105, CP2108, CP2109

Prototype : `CP210x_STATUS CP210xRT_GetNumDevices(uint32_t *lpdwNumDevices)`

Parameters : 1. `lpdwNumDevices`—a pointer to a `uint32_t` location to hold the returned device count

Return Value : `CP210x_STATUS`

- `CP210x_SUCCESS`
- `CP210x_INVALID_PARAMETER`

1.2.2 CP210xRT_Open

Description : Opens and returns a handle to a device using a device index determined by the number returned from CP210xRT_GetNumDevices().

Supported Devices : CP2101, CP2102, CP2102N, CP2103, CP2104, CP2105, CP2108, CP2109

Prototype : `CP210x_STATUS CP210xRT_Open(uint32_t DeviceIndex, PHANDLE pcyHandle)`

Parameters : 1. `DeviceIndex`—the desired device's index into the device list determined by CP210xRT_GetNumDevices()
2. `pcyHandle`—a pointer to a `HANDLE` (4-byte location to hold the returned open handle to the device)

Return Value : `CP210x_STATUS`

- `CP210x_SUCCESS`
- `CP210x_INVALID_HANDLE`
- `CP210x_DEVICE_NOT_FOUND`

1.2.3 CP210xRT_Close

Description : Closes an open handle to the device.

Supported Devices : CP2101, CP2102, CP2102N, CP2103, CP2104, CP2105, CP2108, CP2109

Prototype : CP210x_STATUS CP210xRT_Close(HANDLE cyHandle)

Parameters : 1. cyHandle—Handle to the Com port returned by CreateFile().

Return Value : CP210x_STATUS

- CP210x_SUCCESS
- CP210x_INVALID_HANDLE

1.2.4 CP210xRT_ReadLatch

Description : Gets the current port latch values from the device.

Supported Devices : CP2102N, CP2103, CP2104, CP2105, CP2108

Prototype : CP210x_STATUS CP210xRT_ReadLatch(HANDLE cyHandle, LPWORD lpwLatch)

Parameters : 1. cyHandle—Handle to the Com port returned by CreateFile().

2. lpwLatch—Pointer for 2-byte return GPIO latch values [Logic High = 1, Logic Low = 0].

Return Value : CP210x_STATUS

- CP210x_SUCCESS
- CP210x_INVALID_HANDLE
- CP210x_INVALID_PARAMETER
- CP210x_DEVICE_NOT_FOUND
- CP210x_DEVICE_IO_FAILED
- CP210x_FUNCTION_NOT_SUPPORTED

1.2.5 CP210xRT_WriteLatch

Description : Sets the current port latch values for the device.

Supported Devices : CP2102N, CP2103, CP2104, CP2105, CP2108

Prototype : CP210x_STATUS CP210xRT_WriteLatch(HANDLE cyHandle, WORD mask, WORD latch)

Parameters : 1. cyHandle—Handle to the Com port returned by CreateFile().

2. mask—Determines which pins to change [Change = 1, Leave = 0].

3. latch—values to write to the masked GPIO latches [Logic High = 1, Logic Low = 0].

Return Value : CP210x_STATUS

- CP210x_SUCCESS
- CP210x_INVALID_HANDLE
- CP210x_DEVICE_NOT_FOUND
- CP210x_DEVICE_IO_FAILED
- CP210x_FUNCTION_NOT_SUPPORTED

1.2.6 CP210xRT_GetPartNumber

Description : Gets the part number of the current device.

Supported Devices : CP2101, CP2102, CP2102N, CP2103, CP2104, CP2105, CP2108, CP2109

Prototype : CP210x_STATUS CP210xRT_GetPartNumber(HANDLE cyHandle, LPBYTE lpbPartNum)

Parameters :

1. `cyHandle`—Handle to the Com port returned by `CreateFile()`.
2. `lpbPartNum`—Pointer to a byte containing the return code for the part number.

Return Value : CP210x_STATUS

- CP210x_SUCCESS
- CP210x_INVALID_HANDLE
- CP210x_INVALID_PARAMETER
- CP210x_DEVICE_IO_FAILED

1.2.7 CP210xRT_GetDeviceProductString

Description : Gets the product string in the current device.

Supported Devices : CP2101, CP2102, CP2102N, CP2103, CP2104, CP2105, CP2108, CP2109

Prototype : CP210x_STATUS CP210xRT_GetDeviceProductString(HANDLE cyHandle, LPVOID lpProductString, LPBYTE lpbProductStringLengthInBytes, BOOL bConvertToASCII = TRUE)

Parameters :

1. `cyHandle`—Handle to the Com port returned by `CreateFile()`.
2. `lpProductString`—Variable of type `CP210x_PRODUCT_STRING` returning the NULL terminated product string.
3. `lpbProductStringLengthInBytes`—Length in characters (not bytes) not including a NULL terminator.
4. `bConvertToASCII`—Boolean that determines whether the string should be left in Unicode, or converted to ASCII. This parameter is true by default, and will convert to ASCII.

Return Value : CP210x_STATUS

- CP210x_SUCCESS
- CP210x_INVALID_HANDLE
- CP210x_DEVICE_IO_FAILED
- CP210x_INVALID_PARAMETER

1.2.8 CP210xRT_GetDeviceSerialNumber

Description : Gets the product string in the current device.

Supported Devices : CP2101, CP2102, CP2102N, CP2103, CP2104, CP2105, CP2108, CP2109

Prototype : CP210x_STATUS CP210xRT_GetDeviceSerialNumber(HANDLE cyHandle, LPVOID lpSerialNumberString, LPBYTE lpbSerialNumberStringLengthInBytes, BOOL bConvertToASCII = TRUE)

Parameters :

1. cyHandle—Handle to the Com port returned by CreateFile().
2. lpSerialNumberString—Variable of type CP210x_SERIAL_STRING returning the NULL terminated serial string.
3. lpbSerialNumberStringLengthInBytes—Length in characters (not bytes) not including a NULL terminator.
4. bConvertToASCII—Boolean that determines whether the string should be left in Unicode, or converted to ASCII. This parameter is true by default, and will convert to ASCII.

Return Value : CP210x_STATUS

- CP210x_SUCCESS
- CP210x_INVALID_HANDLE
- CP210x_DEVICE_IO_FAILED
- CP210x_INVALID_PARAMETER

1.2.9 CP210xRT_GetDeviceInterfaceString

Description : Gets the interface string of the current device.

Supported Devices : CP2105, CP2108

Prototype : CP210x_STATUS CP210xRT_GetDeviceInterfaceString(HANDLE cyHandle, LPVOID lpInterfaceString, LPBYTE lpbInterfaceStringLengthInBytes, BOOL bConvertToASCII)

Parameters :

1. cyHandle—Handle to the Com port returned by CreateFile().
2. lpInterfaceString—Variable of type CP210x_SERIAL_STRING returning the NULL terminated serial string.
3. lpbInterfaceStringLengthInBytes—Length in characters (not bytes) not including a NULL terminator.
4. bConvertToASCII—Boolean that determines whether the string should be left in Unicode, or converted to ASCII. This parameter is true by default, and will convert to ASCII.

Return Value : CP210x_STATUS

- CP210x_SUCCESS
- CP210x_INVALID_HANDLE
- CP210x_DEVICE_IO_FAILED
- CP210x_INVALID_PARAMETER

1.2.10 CP210xRT_GetReceiverMaxTimeout

Description : Reads and returns the Receiver Max Timeout directly from the device.

Supported Devices : CP2102N

Prototype : CP210x_STATUS CP210xRT_GetReceiverMaxTimeout(HANDLE cyHandle, uint16_t *pReceiverMaxTimeoutInMicroseconds)

Parameters :

1. cyHandle—Handle to the Com port returned by CreateFile().
2. pReceiverMaxTimeoutInMicroseconds - Pointer to a buffer into which the current Receiver Max Timeout will be written.

Return Value : CP210x_STATUS

- CP210x_SUCCESS
- CP210x_INVALID_HANDLE
- CP210x_INVALID_PARAMETER
- CP210x_DEVICE_IO_FAILED

1.2.11 CP210xRT_SetReceiverMaxTimeout

Description : Sets the Receiver Max Timeout directly to the device.

Supported Devices : CP2102N

Prototype : CP210x_STATUS CP210xRT_SetReceiverMaxTimeout(HANDLE cyHandle, uint16_t ReceiverMaxTimeoutInMicroseconds)

Parameters :

1. cyHandle—Handle to the Com port returned by CreateFile().
2. ReceiverMaxTimeoutInMicroseconds - New Receiver Timeout for the device to use

Return Value : CP210x_STATUS

- CP210x_SUCCESS
- CP210x_INVALID_HANDLE
- CP210x_INVALID_PARAMETER
- CP210x_DEVICE_IO_FAILED

1.2.12 CP210x Runtime Library Type Definitions and Constants

This section lists type definitions from C/C++ Header File CP210xRuntimeDLL.h. For a complete listing, function prototypes, and other API information for the CP210x Runtime DLL, please refer to CP210xRuntimeDLL.h.

```

// CP210xRT_GetPartNumber() returned PartNums (@deprecated {instead see silabs_defs.h::CP210X_PARTNUM})
#define CP210x_CP2101_VERSION          CP210x_PARTNUM_CP2101

```

2. Revision History

Revision 1.3

August, 2020

- Updated function parameter data types throughout.
- Updated API function descriptions to match latest CP210xManufacturingDLL.h and CP210xRuntimeDLL.h files.
- Added section [1.1.43 CP210x Manufacturing Library Type Definitions and Constants](#).
- Updated and corrected function prototypes for [1.1.22 CP210x_SetConfig](#) and [1.1.39 CP210x_GetConfig](#).
- Added section [1.2.1 CP210xRT_GetNumDevices](#)
- Added section [1.2.2 CP210xRT_Open](#)
- Added section [1.2.3 CP210xRT_Close](#)
- Added section [1.2.10 CP210xRT_GetReceiverMaxTimeout](#)
- Added section [1.2.11 CP210xRT_SetReceiverMaxTimeout](#)
- Added section [1.2.12 CP210x Runtime Library Type Definitions and Constants](#)
- Updated table [1.2 CP210xRuntime.DLL](#) with functions `CP210xRT_GetNumDevices()`, `CP210xRT_Open()`, `CP210xRT_Close()`, `CP210xRT_GetReceiverMaxTimeout`, and `CP210xRT_SetReceiverMaxTimeout`

Revision 1.2

July, 2019

- Corrected CP210xRT_ReadLatch and CP210xRT_WriteLatch parameter descriptions (latch and lpLatch are 2-byte values).

Revision 1.1

July, 2018

- Added section [1.1.41 CP2102N Configuration Array lpbConfig](#).
- Added section [1.1.42 Fletcher Checksum](#).

Revision 1.0

April, 2016

- Initial revision.

Silicon Labs intends to provide customers with the latest, accurate, and in-depth documentation of all peripherals and modules available for system and software implementers using or intending to use the Silicon Labs products. Characterization data, available modules and peripherals, memory sizes and memory addresses refer to each specific device, and "Typical" parameters provided can and do vary in different applications. Application examples described herein are for illustrative purposes only. Silicon Labs reserves the right to make changes without further notice to the product information, specifications, and descriptions herein, and does not give warranties as to the accuracy or completeness of the included information. Without prior notification, Silicon Labs may update product firmware during the manufacturing process for security or reliability reasons. Such changes will not alter the specifications or the performance of the product. Silicon Labs shall have no liability for the consequences of use of the information supplied in this document. This document does not imply or expressly grant any license to design or fabricate any integrated circuits. The products are not designed or authorized to be used within any FDA Class III devices, applications for which FDA premarket approval is required, or Life Support Systems without the specific written consent of Silicon Labs. A "Life Support System" is any product or system intended to support or sustain life and/or health, which, if it fails, can be reasonably expected to result in significant personal injury or death. Silicon Labs products are not designed or authorized for military applications. Silicon Labs products shall under no circumstances be used in weapons of mass destruction including (but not limited to) nuclear, biological or chemical weapons, or missiles capable of delivering such weapons. Silicon Labs disclaims all express and implied warranties and shall not be responsible or liable for any injuries or damages related to use of a Silicon Labs product in such unauthorized applications.
