Assembled in China
eero.com

Let's get started

1. Disassemble the cover and PoE+ mounting plate.
2. Install a junction box (single/double/round/octagonal).
3. Set up a PoE+ injector/switch and route an Ethernet cable (5e or higher, 6A recommended) to the junction box.
4. Plug in the Ethernet cable to the PoE+ Adapter and place the adapter in the junction box.
5. Rotate the PoE+ mounting plate until the holes align with the junction box screw holes. One set of cable retention clips should align with the Ethernet and USB-C ports on the eero.
6. Select the two screws that fit the junction box screw holes to attach the PoE+ mounting plate.
7. Route the USB-C and Ethernet cables through the retention clips and plug into the eero.
8. Snap the cover over the eero and PoE+ mounting plate, ensuring that the cables are fully covered.
9. Back out the visible screw until it is flush with the cover to keep it secure.
10. Power on the PoE+ injector/switch. You should see the LED light turn white.

To complete setup, download the app.
