# HOW TO MEASURE - INSIDE MOUNTED

## STEP 1 – MEASURE WIDTH:
Measure top, middle, and bottom of your window opening. Select your narrowest measurement of these three as your window's width.

## STEP 2 – MEASURE HEIGHT:
Measure left, center, and right of your window opening. Use the tallest of these three measurements as your window's height.
**STEP 3 – MEASURE DEPTH:** Minimum of ¾ inch depth is needed for inside mounting.

**STEP 4 – CHOOSE SIZE:** Before selecting your size to order, take your window's width measurement and subtract ¼ inch or more (no more than 1 inch) to determine the width to order. This deduction will allow your shade to move easily up and down without wall interference. Example: Your window measured 30 inches wide, you would order a shade between 29 and 29-3/4 inches wide.

# HOW TO MEASURE - OUTSIDE MOUNTED

1"- 3"   1"- 3"

**STEP 1 – MEASURE WIDTH:**
We recommend selecting a width location that adds 1 to 3 inches on each side of your window opening. Once selected, measure between these two points for your width measurement.

**STEP 2 – MEASURE HEIGHT:**
Select a location above your window opening for the headrail with at least 7/8 inch of flat space for mounting hardware. Then select how far below the window you want your shade to reach and measure between these two points for your height measurement.

**STEP 3 – CHOOSE SIZE:** Before selecting your size to order, choose the product size that is the same or wider than your width measurement and the same or taller for your height measurement.
