

FiberTwist

The standard for
network termination

FiberTwist

innovative fiber & network demarcation

Setting the standard for fiber and network termination

The Fiber-to-the-Home (FTTH) market is growing rapidly. More than ever, end-users expect the network speeds that fiber provides. However, this expansion also brings several challenges - such as managing various OLTs in the field, upgrading networks (e.g., transitioning from 1G to 10G or from Point-to-Point to GPON), and handling large-scale deployments.

That's why we designed the FiberTwist – to make installation easier than ever, for both network operators and end-users.

'In one day we can install twice as many FiberTwist products compared to ONTs from other major vendors'

- An installer at a large German operator

Tailor-made to fit your needs - the FiberTwist offers flexible customization options, from software configurations to logo printing and packaging.

Made of 90% recycled plastics!

As part of our sustainability program, the FiberTwist ONT is made of 90% recycled plastics, while still maintaining the same look and feel.

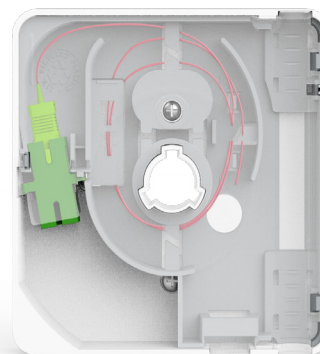

Same product, better for the planet!

One FTU for all deployments

Designed for and by installers, the FiberTwist FTU ensures fast and easy installation every time. With a broad range of options - like pigtails, gas blockers, and patch in/out options - it's suitable for any deployment scenario.

And when it's time to upgrade? Every active unit fits any FiberTwist FTU. Just swap, twist, and you're set.

Twist on any active unit

Easily connect the active unit of the FiberTwist to any FTU with a simple 'Twist'. So easy that installers aren't needed when activating or upgrading the fiber connection.

The FiberTwist is suitable for GPON, XGS-PON, PtP/AE and 10G PtP/AE. It features 1 to 4 LAN ports from 1G to 10G, voice/FXS and CATV options.

Interoperability

TrueTalk™ enables the FiberTwist to 'talk to' the main OLTs, allowing for mixed deployments!

Maximum flexibility

With a great variety of combinations, there is a FiberTwist model for each scenario!

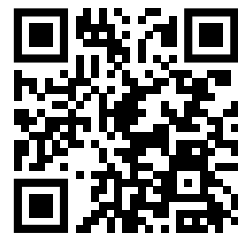

True do-it-yourself

The FiberTwist allows for true DIY activation and upgrading, saving greatly on installer costs.
