

Images for illustrative purposes only

Pioneer SC Series components are designed for a very select group of users—those who settle for nothing less than the best in audio and video entertainment. The state-of-the-art performance and specifications of these high-end AV receivers are the results of uncompromising standards of engineering and manufacturing, painstaking selection of parts and devices, and careful testing of each component.

The core concept for the SC Series AV receivers is Pioneer's original Multi-Channel Stereophonic Philosophy—faithful multi-channel reproduction of the master sound by equalising the response for all channels, just like stereo sound reproduction. Versatile technologies and know-how have been lavishly incorporated to realise matchless high-quality sound and sophisticated performance. The AV receivers are laden with latest features such as Dolby Atmos®, the Super Resolution technology derived from Pioneer's high-end Blu-ray Disc players, DSD and other Hi-Res audio file playback via Wi-Fi, and the new insulator and other high-grade parts. What's more, this year's lineup includes models upgradable for the DTS:X™ object-based surround sound format.

This Product Reference Guide introduces the technologies and features that give the special qualities to the SC Series AV receivers. We hope the information will help enrich your home entertainment experience.

Technology Index

Multi-Channel Stereophonic Philosophy

 - Up-Sampling (192 kHz/32-bit)
 - Digital Filter
- Hi-bit24 Audio Processing
- Advanced Sound Retriever
- Auto Sound Retriever
- Auto Sound Retriever for ARC
- Sound Retriever Link
- Sound Retriever AIR
- Auto Level Control
- PQLS with HDMI

Video Technologies

- Video Scaler with Super Resolution
- Ultra HD (4K/60p/4:4:4/24-bit) Pass-through with HDCP 2.2
- Next Generation Video Standard Ready
- Advanced Video Adjust
- Stream Smoother
- Stream Smoother Link
- Triple HD Video Noise Reduction
- Deep Colour
- “x.v.Colour”

Audio Formats

- DTS:X™ Ready
 - Dialog Control
- Dolby Atmos
- DTS Neural:X™
- DTS Neo:X|11.1
- Dolby Surround
- DTS-HD Master Audio
- Dolby TrueHD
 - Loudness Management
- Hi-Res Audio File Playback via USB/Network
- Multi-Channel Audio File Playback via USB/Network
- Native DSD Playback via USB-DAC with DoP Transmission
- DSD Music File Playback via USB
- DSD Disc (SACD) Playback via HDMI
- Various Music File Playback via USB/Network/HDMI
- Variable File Play Action
- Gapless Playback

Sophisticated Listening Modes

- Virtual Speakers
- [Rendering Mode](#)
- [11ch Speaker Configurations](#)
- Pre-Amp Mode
- Advanced Surround Modes
- Extended Stereo
- Front Stage Surround Advance
- Optimum Surround

Connectivity

- USB-DAC
- HDMI® (4K@60, 3D, ARC)
- Made for iPod and iPhone
- Android™ Audio/Video Playback with MHL 2™
- Front USB Input

Network Features

- DLNA Certified™ (1.5)
- Apple AirPlay Certified
- HTC Connect™ Certified
- Compatible with Windows® 8.1/Windows® 8
- Internet Radio (vTuner)
- Spotify® Digital Music-Streaming Service Ready

Advanced Control

- [Ready for Start-up Navi App](#)
- Ready for iControlAV5
 - AV SCALER
 - STATUS VIEWER
 - CURSOR
 - SOUND EXPLORER
 - PUSH PLAYER

Multi-Channel Stereophonic Philosophy

LX89 LX79 LX59

In a multi-channel system, all adjacent channels should be stereophonic—that's the concept of Pioneer's Multi-Channel Stereophonic Philosophy. In a normal stereo reproduction, the same type of speakers are placed at equal distance from the listener, and driven with the same amplifier. Similarly, for an ideal multi-channel reproduction environment, all channels should have the same speakers, placed at equal distance from the listener, and driven by the same amplifier. However, such arrangements are physically and economically difficult in a home setting. For example, it wouldn't be practical to fix the same type as the front speakers on to the ceiling as top speakers. The shape of the room and furniture placement will also limit speaker positions. So Pioneer developed the following three steps to create the ideal reproduction environment within a home.

[minamoto]

Step 1

"Direct Energy Design" technology that realises simultaneous high-power output for all channels.

Selection of optimal parts and incorporation of cutting-edge technology.

[waza]

Step 2

Automate the monitoring methods of professional studios and create the "Ideal Reproduction Environment."

Measure the listening environment's features and compensate the speaker size, distance, frequency characteristic, and phase with DSP technology.

[tamashi]

Step 3

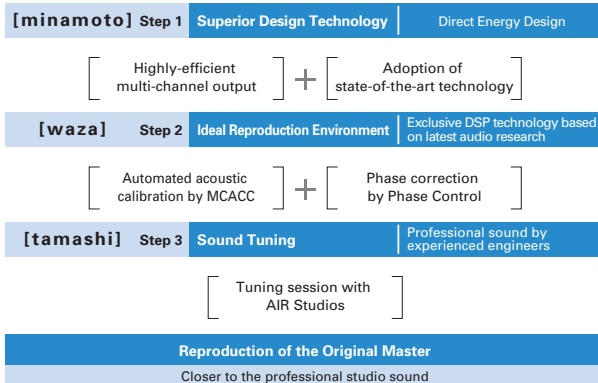

"Sound Tuning" by professional engineers brings out the "master sound."

The master sound made through these steps reproduces audio just as the creator intended, offering an immersive sensory experience. Additionally, with the latest object-based surround sound formats such as DTS:X™ and Dolby Atmos®, you can enjoy incredibly rich multi-dimensional audio in sync with what you see.

Multi-Channel Stereophonic Philosophy

Pioneer's 3-step technology for reproducing studio master sound

All neighboring speakers connected by a line should produce stereophonic sound

Realistic layout example with furniture (varied speaker distance and type)

Ideal listening environment example after compensation (virtually, same speakers placed at equal distance)

[minamoto]

source/origin/foundation

Class D Amplifier (Direct Energy HD Amplifier)

LX89 LX79 LX59

The Direct Energy HD (High fidelity class D) Amplifier has further evolved as Class D Amplifier to meet the needs of the latest HD content. With our MOSFET, the Direct Power FET, a simple, high-power solution is provided to fully enjoy today's AV entertainment. The new custom bypass capacitors further enhance the advantages of the Class D amplifier, producing powerful bass while also featuring gentle expressiveness.

Class D Amplifier Assy

Custom Bypass Capacitors

High-Power Simultaneous Multi-Channel Drive

With class AB amplifiers, driving all channels in full power is only possible for a short time, at around 300 W to 400 W power output. Pioneer's Class D Amplifier has plenty of allowance to simultaneously drive 9 channels at 760 W (SC-LX59) to 850 W (SC-LX89) power output, letting you fully enjoy dynamic scenes.

Simultaneous Power Output for Pioneer's Class D Amplifier (9ch)

Pioneer Class D Digital Amp

Pioneer—only one keeping up high power with multi-channel output

Other Models—high power for 2-ch specification, but output drops with actual 9-ch drive

General Class AB Analogue Amp

Quick-Response Sound

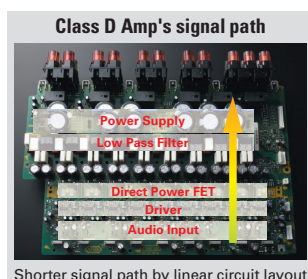

The Direct Power FET is directly connected to the print circuit board without any wiring. This simple structure maximises audio performance by reduced noise and improved switching, offering a quick-responding sound, perfect for digital content playback.

Direct Power FET features a simple structure with superior heat dissipation

High Efficiency

The Class D Amplifier has been designed with a simple structure to take a straight and short signal path, resulting in improved sound quality.

Shorter signal path by linear circuit layout

Improved Circuit Design

On the top two models, dedicated ICs are lavishly used on the circuit in pursuit of ideal sound. The operational amplifier IC for processing small signal is set apart from the amplifying section to prevent mutual interference. This allows clear signal to be transmitted to the Direct Power FET. As for the SC-LX59, it adopts a compact integrated IC with space merit. The directly coupled IC reduces signal loss and provides precise signal transmission.

SC-LX89/SC-LX-79 Amplifier Circuit Configuration

SC-LX59 Amplifier Circuit Configuration

Low Heat Generation

The simple form of the Direct Power FET has the advantage of improved thermal characteristics. In addition to the upper-side heat dissipation from the heat sink, the circuit board's heat radiation feature is also utilised for downward heat dissipation, providing efficient cooling for a superior performance.

Thermal View Comparison of Top Panel

Eco-Friendly

The power consumption of the Direct Energy HD Amplifier is exceedingly lower than analogue amplifiers — letting you save energy without compromising performance.

ESS SABRE³² Ultra DAC

LX89 LX79 LX59

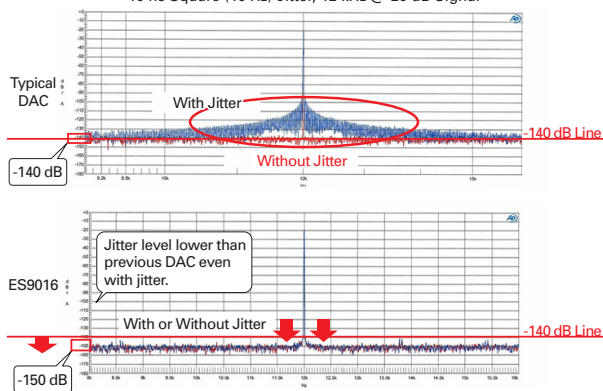

The highly acclaimed 192 kHz/32-bit ESS SABRE³² Ultra DAC (ES9016S) is adopted to deliver exceptional sound, with ultra-low distortion and high signal-to-noise ratio. It offers jitter-free performance for an astounding audio reproduction with rich deep bass, bringing out the full potentials of Pioneer's Direct Energy HD amplifiers.

SABRE³² DAC

ESS SABRE³²

ESS DAC SABRE³² Jitter Reduction Performance
10 ns Square (10 Hz) Jitter, 12 kHz @ -20 dB Signal

Shielded DC/DC Coils

LX89

With proven track record on devices handling minute signals such as high-end digital cameras and ultra-sensitive surveillance cameras, the shielded DC/DC coils contribute to further improving the S/N ratio.

New Low ESR Custom Capacitors

LX89 LX79 LX59

Low ESR (Equivalent Series Resistance) custom capacitors are newly adopted to improve the S/N ratio.

PML MU Capacitors by Rubycon Corporation

LX89 LX79 LX59

The polymer multi-layer MU capacitors (PML MU) co-developed with Rubycon Corporation provide clear and open high-range sound.

NJM4585 Op Amp by JRC

LX89 LX79 LX59

The NJM4585 operation amplifier co-developed with New Japan Radio Co., Ltd. features low distortion and high-resolution reproduction across a wide bandwidth. These selected parts bring out the full potentials of the Direct Energy HD Amplifier.

Low Leakage Flux Power Transformer

LX89

The power transformer features minimum leakage flux, ensuring low noise with increased S/N ratio.

Horizontal Leakage Flux Comparison

MCACC Pro Auto Room Tuning

LX89 LX79 LX59

MCACC Pro goes a step further by analysing the phase and group delay characteristics due to network filtering to precisely control phase differences between speakers. This correction is also performed between channels, providing a smooth flow of sound as if all delivered from the same type of speaker. Other features include independent correction for dual subwoofers, and speaker position adjustment in 1-millimeter increments. MCACC Pro corrects phase differences in all ranges and all channels, from phase difference in the original audio material to the sound emitted from the speakers.

Phase Control

When amplifying multi-channel audio signals, receivers use a Low Pass Filter (LPF) to process low-frequency signals for subwoofer output. This causes "phase lag" — a delay of approximately 5 msec — of the low-frequency signals compared to the main channel signals. As a result, the delayed bass makes the sound lack synchronization. Pioneer's Phase Control technology effectively eliminates phase lag and significantly improves the multi-channel sound without any extra operation.

The "Phase Control" Compensates for the Delay of Low-Frequency Sound

Auto Phase Control Plus

During Blu-ray Disc/DVD/multi-channel file playback, Auto Phase Control Plus makes real-time analysis of the phase difference between the LFE (low frequency effect) and the main signals, and automatically compensates the gap. Elimination of phase lag enhances strong bass and clear high-frequency sound — especially effective for audio content such as live performance and music video clips.

* Effectiveness depends on content

Auto Phase Control Plus

Effect of Auto Phase Control Plus (data comparison)

Superior sound provided by compensating the lag in the subwoofer channel on the disc.

Speaker Polarity Check

MCACC Pro will check the speaker polarity for proper connection. "Reverse Phase" will be displayed on the GUI screen if the speaker's wiring (+ and -) is inverted.

Standing Wave Control

Acoustic standing waves occur when the sound waves from your speaker resonate with those reflected off the walls. Depending on the speaker placement, your listening position or the shape of the room, standing waves have a negative effect on the overall sound, especially in certain lower frequencies. Standing Wave Control effectively decreases resonance and prevents inaccurate EQ-setting calibration.

Standing Wave in a Typical Listening Room

Independent Dual Subwoofer Output

When connecting an additional subwoofer to increase the bass, the two subwoofers may not be at a same distance. In such a case, cancelling out of the bass may occur and prevent you from perceiving the full effect of the additional subwoofer. MCACC Pro supports independent adjustment for each subwoofer, offering optimal performance for a dual-subwoofer setup. You can enjoy free placement of your subwoofers.

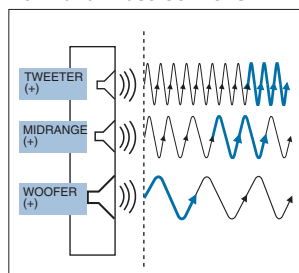

Subwoofer EQ

The subwoofer EQ feature allows you to adjust the subwoofer tone. For Auto MCACC, the subwoofer EQ is automatically adjusted with EQ type ALL CH ADJ, while manual adjustment is available with EQ type SYMMETRY and FRONT ALIGN. As with other EQ, the manual adjustment can be done on the AV receiver's GUI.

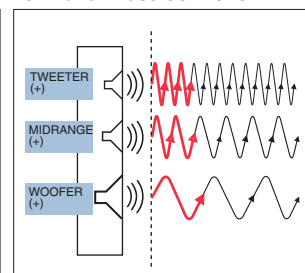

Full Band Phase Control

The further advanced Full Band Phase Control technology focuses on the group delay in the speaker network filter, and compensates with special digital signal processing (DSP), to adjust the phase of each unit as well as the group delay for each speaker. Full Band Phase Control gives multi-range speakers the sound coherence of full-range speakers, while retaining the wide frequency range advantage.

Full Band Phase Control Off

Full Band Phase Control On

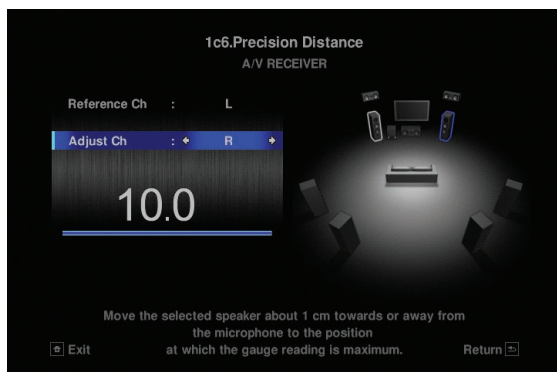

Adjusts group delay for each unit

Precision Distance*

Precision Distance is an innovative feature for making millimeter-level manual adjustments to speaker distance. You can easily duplicate a skilled installer's precise positioning with the help of a level gauge shown on the display.

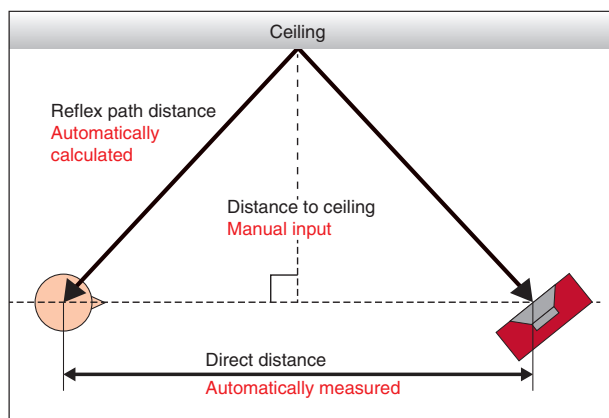

* SC-LX89 only

For Dolby Atmos Enabled Speakers

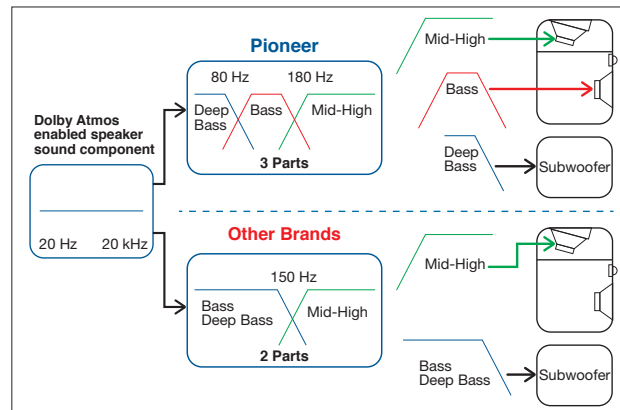

Reflex Path Distance Adjustment System

When using Dolby Atmos enabled speakers, the reflex path distance is calculated from the automatically measured direct distance, and the vertical distance between the ceiling and the speaker entered by the user. As a result, the timing of the reflex path's sound is matched with direct sound, allowing accurate reproduction of the sound object's movement effect on Dolby Atmos.

Bass Management System for Dolby Atmos Enabled Speakers

When using Dolby Atmos enabled speakers, the low-frequency components are usually all redirected to the subwoofer. Since this will include frequencies featuring directivity, the resulting sound lacks a seamless feel. MCACC Pro redirects the low frequency component with directionality to the floor speaker below the Dolby Atmos enabled speaker element, and the lower frequency components to the subwoofer. This optimal signal distribution creates superior sound localisation, maximising the advantage of Dolby Atmos content.

Without Bass Management No horizontal sound localisation

With Bass Management Horizontal sound localisation achieved

AIR Studios Sound Tuning

LX89 LX79

Pioneer has a proven track record of applying its audio expertise to the creation of multi-channel sound environments, collaborating with George Martin's AIR Studios in England on numerous occasions. Established in 1969 in London, AIR Studios is now an acclaimed recording complex, favoured by many of the world's most popular and renowned musical talents. The SC-LX89 and SC-LX79 have received the AIR Studios Monitor certification.

Sound tuning with AIR Studios has been adopted the top model preceding the SC Series. The tuning session requires sound quality that exceeds the previous model. Every time, various requirements on the details of sound are presented, and clearing all the hurdles is a challenging process. As professional engineers, both sides have obsessions and strong feelings on sound, and each tuning session is an intense and serious exchange. The resulting sound is filled with the heart and soul of the engineers, backed by the long history of Pioneer.

AIR Studios

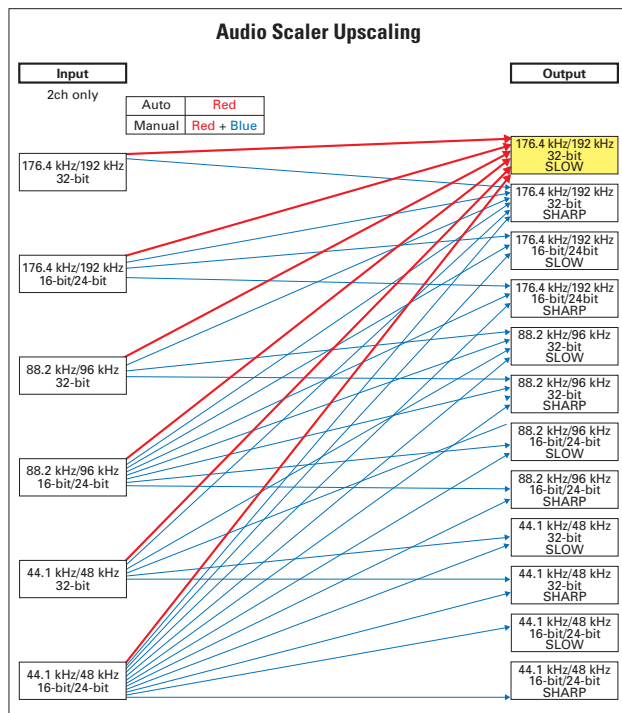

Studio 6

Audio Scaler

LX89 LX79 LX59

Pioneer's Audio Scaler technology consists of Hi-bit32, Up-Sampling, and Digital Filter. The Hi-bit32 Audio Processing improves resolution and density, while the Up-Sampling reduces noise. Then the Digital Filter creates soft, natural sound and improves transient response and pre-echo effect. The three features integrate to upscale all 2-channel audio content up to 176.4 kHz/192 kHz 32-bit playback—176.4 kHz/192 kHz 32-bit by auto, and selectable from 176.4/192, 88.2/96, 44.1/48 kHz frequency, 32/24-bit rate by manual setting—offering realistic reproduction of the content. The features can be controlled on the Sound Explorer screen of the iControlAV5 app.

Hi-bit32 Audio Processing

The technology works to create undistorted sound, bringing out the best in the 32-bit DAC. The 32-bit DAC hardware alone does not reproduce better sound. Maximum performance is gained by applying the Hi-bit32 processing to expand signal resolution, creating more detailed, smooth sound, closer to the original analogue signal. Hi-bit32 Audio Processing also increases the sound pressure for a tactile listening experience, and the more channels you have, the more impressive it becomes. It is effective for multi-channel content on DVD/Blu-ray Disc as well as CD audio, and works with any disc player.

**Hi-bit
32**
Hi-bit 32
Processing

Actual Effects

24-bit vs 32-bit signal wave form comparison

Up-Sampling (192 kHz/32-bit)

The Up-Sampling feature of the Audio Scaler upgrades the sound with reduced noise, providing maximum quality audio playback of up to 192 kHz/32-bit.

Digital Filter

The digital filter lets you enjoy two types of sound characters by switching the DAC — “Slow” for soft and warm, and “Sharp” for solid and tight sound.

Digital Filter

Hi-bit24 Audio Processing

LX89

Combined with the 24-bit DAC, maximum performance is gained by applying the signal processing to expand signal resolution, creating more detailed, smooth sound and increased sound pressure. The technology is effective for multi-channel content on CD/DVD, PC files less than 24-bit and works with any disc player.

**Hi-bit
24**
Hi-bit 24
Processing

Advanced Sound Retriever

LX89 LX79 LX59

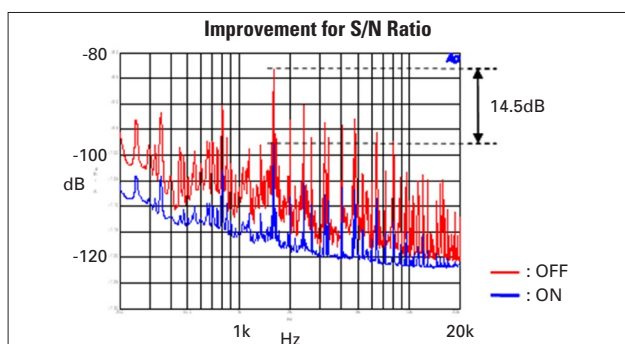

The Advanced Sound Retriever restores the output of compressed audio — such as WMA, MPEG-4 AAC, and MP3 — to the level of CD sound. The technology creates new signals to restore the minor details left out during the compression process. Advanced Sound Retriever for multi-surround sound is compatible with DVD soundtracks featuring Dolby Digital or DTS.

Auto Sound Retriever

LX89 LX79 LX59

Since the Advanced Sound Retriever is designed with an algorithm optimised to process 128 kbps signal, it did not work well with 8-15 kHz high frequencies in 64 kbps signal, which is the bit rate for quite a few internet stations. The newly developed Auto Sound Retriever automatically determines the audio signal's bit rate, and interpolates the data lost during compression. It is especially effective for improving the sound quality of low bit rate content — an ideal feature when switching between internet radio stations with different bit rates.

Auto Sound Retriever for ARC

LX89 LX79 LX59

With digital broadcast, although images are displayed in high-definition, the audio quality is not as high since they are compressed with various bit rates. By applying Pioneer's Auto Sound Retriever feature to TV broadcast signals, it adjusts the effects according to the bit rate transferred via HDMI's ARC (Audio Return Channel), letting you enjoy digital TV broadcast in high-definition sound via Pioneer AV receiver.

Sound Retriever Link

LX89 LX79 LX59

Through HDMI connection, Sound Retriever Link detects the original audio file information such as source type, codec, and bit rate played on a compatible Pioneer Blu-ray Disc player, and automatically switches to the most suitable Sound Retriever. So there is no need to switch on/off according to the source. Advanced Sound Retriever is selected for Blu-ray Disc and DVD sources, and Auto Sound Retriever is selected for other sources.

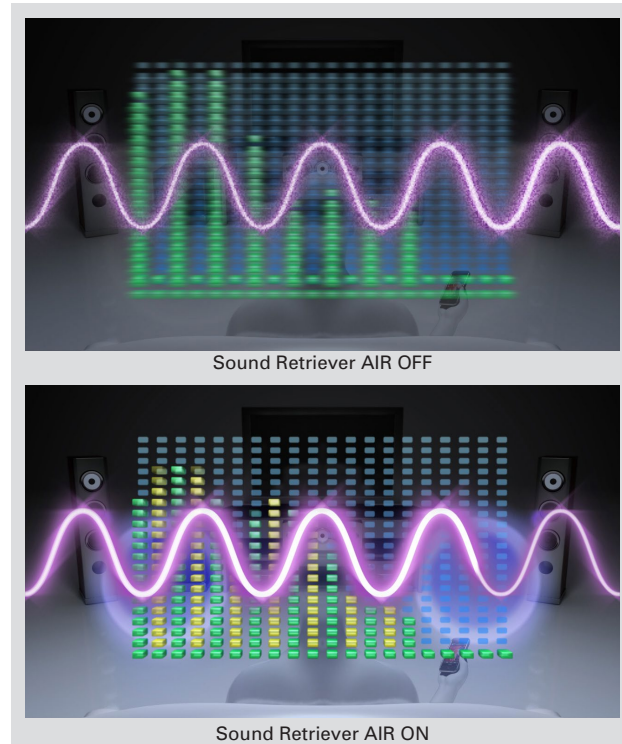

* Advanced Sound Retriever is selected for all sources when connected with a non-compatible Blu-ray Disc player.

Sound Retriever AIR

LX89 LX79 LX59

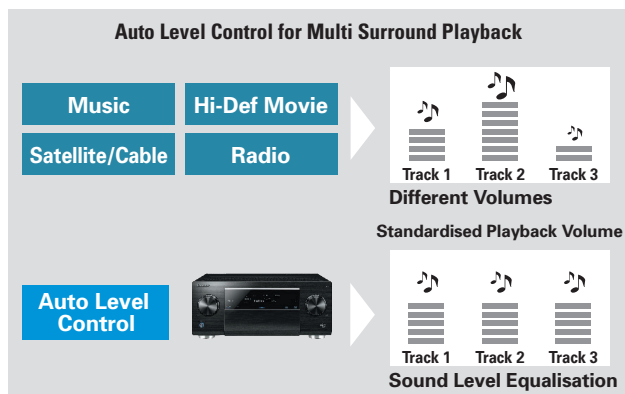

When streaming music via *Bluetooth*, the sound quality often suffers due to the compression process. Pioneer's Sound Retriever AIR is the world's first technology for improving the quality of *Bluetooth* transmitted sound. It restores the music cadence lost through compression, and also reduces the noise generated by *Bluetooth* transmission resulting in a better S/N ratio.

Auto Level Control

LX89 LX79 LX59

Auto Level Control equalises volume level differences between tracks when playing music from an iPod or other sources. Multi-channel Auto Level Control supports surround sound playback, maintaining a consistent level and clear audio. The function adjusts low and high frequency sounds, dialogues, surround effects etc. that are difficult to hear in low volume, to optimal levels — an ideal feature for listening at night without disturbing others.

PQLS with HDMI

LX89 LX79 LX59

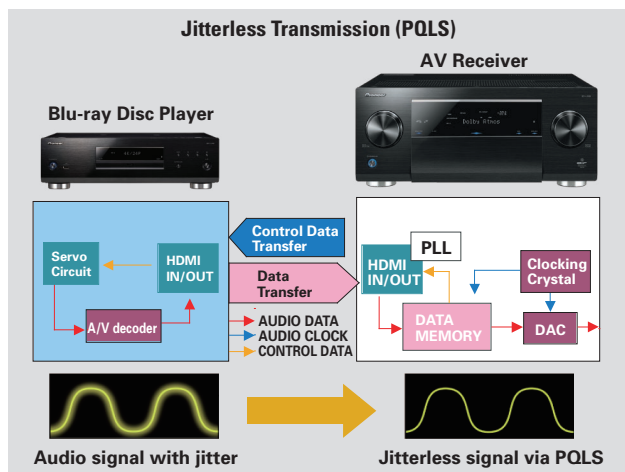

With the precision quartz controller on the AV receiver, Pioneer's Precision Quartz Lock System (PQLS) eliminates distortion caused by timing errors. It controls the amount of audio signals from the AV receiver to the compatible player, giving the best possible digital-to-analogue conversion.

Three types of PQLS are available on the AV receivers.

- PQLS 2ch Audio: For CD playback.
- PQLS Multi-Surround: For CD/DVD/BD playback, when the Blu-ray Disc player output is set to LPCM.
- PQLS Bit-stream: For CD/DVD/BD playback, all the time.

For PQLS to be effective, Control with HDMI needs to be on, and PQLS setting needs to be set to Auto.

Video Scaler (1080p to 4K) with Super Resolution

LX89 LX79 LX59

Ultra HD, usually referred to as 4K, is the next generation ultra-high-resolution standard with 3,840 x 2,160 pixels or 4,096 x 2,160 pixels—four times the current HD 1080p standard. By detecting the fine texture in the image and applying appropriate compensation, a more detailed and beautiful image is created. This high-grade HD video is further elevated to an even more detailed, natural and realistic picture with the video scaler featuring super resolution. The AV receiver upscales 1080p video sources up to 4K/60p high-resolution images (4K/60p/4:4:4/24-bit, 4K/24p/4:4:4/36-bit, 4K/60p/4:2:2/36-bit) for viewing on a 4K-compatible display. The AV receivers support 18 Gbps bandwidth, allowing reproduction of 4:4:4 colour format, and are ready to bring out the best from the future generation Ultra HD devices with 18 Gbps transfer capabilities.

Ultra HD (4K/60p/4:4:4/24-bit) Pass-Through with HDCP 2.2

LX89 LX79 LX59

The feature lets you take advantage of the highest-quality video source, by passing through 4K/60p signals for viewing on a compatible display. The AV receivers support HDCP 2.2, so by connecting to a compatible device, you can enjoy premium content such as 4K videos with digital copy protection.

* Support up to 4K/60p/4:4:4/24-bit on BD, DVD (HDMI IN 1), SAT/CABL (HDMI IN 2), HDMI OUT 1 and HDMI OUT 2.

Next Generation Video Standard Ready

LX89 LX79 LX59

The AV receivers are ready for the next generation video standard HDR (High Dynamic Range) and BT.2020, which were adopted by Ultra HD Blu-ray™. HDR is a technology that drastically expands the brightness peak, providing a higher contrast between light and dark images, which creates even more life-like pictures. BT.2020 is a new colour-recording technology allowing a much wider gamut than the current BT 709 standard, enabling vividly rich colouration.

Advanced Video Adjust

LX89 LX79 LX59

Advanced Video Adjust is a new feature which optimises video signals according to the connected display type, such as plasma display panel, LCD, or projector. Additionally, it automatically adjusts the picture image for the distance of your viewing position, based on MCACC measurement data.

* Function not available for component/composite analogue connection. Video optimization only available for HDMI connection.

Stream Smoother

LX89 LX79 LX59

Stream Smoother is a video adjustment feature for watching network content on your home cinema. It reduces block noise and mosquito noise on low bit rate video content such as YouTube™, offering finer and clearer images.

Stream Smoother OFF

Stream Smoother ON

* For illustration purpose only

Stream Smoother Link

LX89 LX79 LX59

Through HDMI connection, Stream Smoother Link detects the source type playing on a compatible Pioneer Blu-ray Disc player, and automatically switches Stream Smoother on or off accordingly. So there is no need for manual switching depending on the source. Stream Smoother is turned off for Blu-ray Disc and DVD sources, and turned on for network content to enrich low bit rate video quality.

* When connected with a non-compatible Blu-ray Disc player, Stream Smoother is turned off with "Auto" setting.

Triple HD Video Noise Reduction

LX89 LX79 LX59

The AV receivers feature three separate noise reduction circuits for enhanced video performance.

- Component Frame Noise Reduction (YNR/CNR): reduces Gaussian noise without blurring the picture
- Block Noise Reduction: reduces block noise found in flat areas
- Mosquito Noise Reduction: reduces noise along the outline of images

The Pioneer-exclusive advanced PureCinema I/P Converter also helps to remove distracting lines during playback.

Triple HD Video Noise Reductions

Deep Colour

LX89 LX79 LX59

Pioneer AV receivers support 36-bit Deep Colour, featuring smooth gradation steps with more accurate precision of brightness and colour information, resulting in superbly detailed, natural colour.

36-bit Deep Colour Image

* For illustration purpose only

"x.v.Colour"

99 97 95 91

Pioneer AV receivers support "x.v.Colour", which almost doubles the range of colours (known as the "gamut") that can be accurately captured, and reproduced on a compatible display, thereby more closely matching the natural characteristics of the human eye.

* "x.v.Colour" only available for playback of discs recorded with AVCHD devices. "x.v.Colour" and the "x.v.Colour" logo are trademarks of Sony Corporation.

DTS:X™ Ready**LX89 LX79 LX59**

DTS:X is the next-generation audio codec from DTS that leverages object-based audio to enable new immersive and interactive audio experiences. Since DTS:X can automatically adapt the audio to the existing channels and speaker system, no specific speaker layout is required. Experience an immersive soundscape with incredibly rich and life-like audio. The format is backward compatible with DTS-HD Master Audio, so you can also give new life to your movie collection. With the ideal reproduction environment created by MCACC Pro, and the powerful and precise multi-channel output by the Class D Amplifier, the Pioneer AV receivers maximise the advantages of the DTS:X format.

* DTS:X will be available with firmware update.

Dialog Control

The feature lets you independently control the volume of dialog—a useful feature for people hard of hearing, or for late-night movie viewing.

Dolby Atmos®**LX89 LX79 LX59**

Dolby Atmos is a unique new technology for enjoying the latest surround sound. In a movie cinema, overhead speakers are placed, with a multi-layer approach to the sound design. On top of the conventional channel-based soundtrack, object-oriented mixing is used to layer dynamic sound elements, so regardless of the cinema's speaker setup, independent sound elements can move around freely in a three-dimensional space. Compared to Dolby Digital with discrete channels, Dolby Atmos offers seamless surround sound movement with up to 64 separate speaker output and a sense of height created by the overhead speakers. The sound is completely in sync with the screen view, providing total immersion with unprecedented sound localisation and movement.

This cinema sound experience can be reproduced in your home with Pioneer's Dolby Atmos AV receiver, which not only decodes Dolby Atmos, but also supports up to 7.2.2ch speaker system with a stand-alone AV receiver, and up to 7.2.4ch system by adding an external amplifier.

What's more, with the MCACC Pro room calibration technology, the AV receiver not only adjusts the speaker distance, level, and tones, but also the phase differences for precise sound delivery. When using Dolby Atmos enabled speakers, MCACC Pro calculates the reflex path distance and also uses the Bass Management System to bring out the best from Dolby Atmos. You can fully appreciate the object effects of Dolby Atmos with more clear and accurately positioned cinema sound.

Speaker Layout of a Dolby Atmos Cinema

Speaker Layout Example of a Dolby Atmos Home Cinema (7.2.4ch)

DTS Neural:X™**LX89 LX79 LX59**

DTS Neural:X is the latest down/up-mixing and spatial remapping technology built into DTS:X. It provides an up-mx of Neural:X-encoded and non-encoded (PCM) data and can produce up to 11.x channels, letting you enjoy a more realistic atmosphere regardless of the original audio format.

DTS Neo:X | 11.1**LX89 LX79 LX59**

The AV receivers feature DTS Neo:X 11.1ch surround sound format. Using 5.1ch or 7.1ch soundtracks, the format creates additional height and wide channels, and produces an enveloping a semi-spherical sound field for a lifelike 3D sound for music, games, or movies.

Dolby Surround**LX89 LX79 LX59**

The new surround sound effectively up-mixes legacy channel-based content for reproduction on a Dolby Atmos environment, expanding the original source to fill the speaker layout of a Dolby Atmos system.

DTS-HD Master Audio™**LX89 LX79 LX59**

With DTS-HD Master Audio, you can enjoy sound that is bit-for-bit identical to the studio master. DTS-HD Master Audio delivers audio at extremely high variable bit rates of 24.5 Mbps, which far exceeds standard DVDs. DTS-HD Master Audio offers movies and music in the pure, original state as intended by the artists.

Dolby TrueHD

LX89 **LX79** **LX59**

Dolby TrueHD delivers sound that is on par with the original soundtrack, letting you experience the world of true high-definition entertainment from Blu-ray Discs. With lossless encoding in up to 18 Mbps bit rate, Dolby TrueHD creates a synergy with high-definition video to offer you a home cinema experience like never before.

Loudness Management

Loudness Management frees you from annoying volume fluctuations that often occur when switching channels, programs, or input sources, by maintaining a consistent loudness-level. The function turns on/off during content playback, activating or deactivating post processing within the decoder. When the function is turned off, audio is delivered in a lossless mode.

Hi-Res Audio File Playback via USB/Network

LX89 **LX79** **LX59**

In addition to 5.6/2.8 MHz DSD (Direct Stream Digital) file playback via USB, the Pioneer AV receivers are the first to realize DSD streaming* via wired and wireless network. As for other Hi-Res formats, up to 192 kHz/24-bit WAV, FLAC, AIFF, and Apple Lossless files can be played via USB as well as both wired and wireless network.

* DLNA compatible server or NAS capable of DSD streaming required

 The product with this logo is conformed to Hi-Res Audio standard defined by Japan Audio Society. This logo is used under license from Japan Audio Society.

Multi-channel Audio Playback via USB/Network

LX89 **LX79** **LX59**

Pioneer's AV receivers are the first in the industry to realise multichannel (5.0ch/5.1ch) playback of high-resolution audio formats. You can fully enjoy recordings of live concerts and classical music without setting up a special system. For FLAC files, 96 kHz/24-bit multi-channel playback is available via USB and wired/wireless network, while for WAV format, 192 kHz/24-bit files can be played back by USB, 96 kHz/24-bit files via wired network, and 48 kHz/24-bit files via wireless network.

Native DSD Playback via USB-DAC with DoP Transmission

LX89

The AV receiver allows direct USB connection with your computer for audio playback, with signal transfer via USB-DAC. The result is high-quality sound reproduction with reduced jitter, reproducing master quality sound with extremely precise audio signals. A dedicated driver can be installed to your computer from the included CD-ROM. The AV receiver supports Native DSD playback by DoP (DSD over PCM) transmission.

DSD Music File Playback via USB

LX89 **LX79** **LX59**

The AV receivers can play 5.6 MHz or 2.8 MHz DSD (Direct Stream Digital) files via network or from a USB memory stick, letting you enjoy superior sound without any special players.

DSD Disc (SACD) Playback via HDMI

LX89 **LX79** **LX59**

The AV receivers can play high-quality DSD audio files from SACD discs via HDMI in 2.8 MHz.

Various Music File Playback via USB/Network/HDMI

LX89 LX79 LX59

Various music files can be played back via USB or HDMI (SACD). With DLNA and AirPlay features, the AV receivers let you stream audio from compatible devices. Through a DLNA app, you can now stream WMA, MP3, AAC, WAV, FLAC, AIFF, and Apple Lossless audio files stored on your DMS.

*** Up to 96 kHz via USB and wired network, up to 48 kHz via wireless network.

Variable File Play Action

LX89 LX79 LX59

Various features to easily access and play your music library are available for the AV receivers. Using the remote control, you can fast forward/fast rewind during playback, and sort songs (alphabetical/track order). In addition to these operations, the new iControlAV5 app lets you search songs and albums. This feature works even if you don't remember the exact title.

Search Songs on iControlAV5

Gapless Playback

LX89 LX79 LX59

Enjoy smooth, uninterrupted audio playback for WAV, FLAC, AIFF, AAC, MP3, Apple Lossless, and DSD files. The function is ideal for listening to music tracks intended for continuous play, such as classical music, progressive rock, concept albums, or live recordings.

* Gapless playback only available for DLNA 2-Box Pull and USB memory playback. Not available for WAV/FLAC multi-channel streaming.

Virtual Speakers

LX89 LX79 LX59

By turning on Virtual Surround Back, Virtual Height, and Virtual Wide modes, you can experience virtual 11.1-channel sound from a 5.1-channel speaker setting (Fig. 1). The sound field can be adjusted with intuitive control on your iPod touch/iPhone/iPad or Android device using the iControlAV5 application.

Virtual Wide

Virtual Wide mode (Fig. 2) is a useful solution for creating the effects of front wide speakers, letting you enjoy surround sound in a rich sound field — all without placing extra speakers.

Virtual Height

If you want to experience vertically falling sound but can not place front height speakers, there's a perfect solution. Pioneer's Virtual Height mode (Fig. 3) creates a height sound image without front height speakers, letting you enjoy enveloping virtual 7.1-channel sound from 5.1-channel speaker settings.

Virtual Surround Back

Want to be thrilled by surrounding sound from behind, but don't have the space for surround back speakers? Then try Virtual Surround Back mode (Fig. 4). It simulates 7.1-channel surround sound, giving the impression of surround back speakers when listening to a 5.1-channel source. What's more, by turning on both Virtual Height and Virtual Surround Back modes, you can enjoy virtual 9.1-channel sound on a 5.1-channel speaker setting. By adding front wide speakers, you can enjoy virtual 11.1-channel sound from a 7.1-channel speaker layout.

Rendering Mode

LX89 LX79 LX59

The mode lets you switch the decoding signal between OBJECT (object bas) and LEGACY (channel base) during content playback. If OBJECT is selected when non-Dolby Atmos content is being played, the listening mode switches to Dolby Surround. You can compare between object-based, channel-based, and up-mixed sound.

11ch Speaker Configurations

LX89 LX79 LX59

With speaker terminals for 11 channels and PRE OUT EXTRA 2 terminals*, various speaker layouts are available to suit your taste or usage patterns. Seven configurations ([A-1], [A-2], [B], [C], [D], [E], [F-1]) are available for optimum performance when using Dolby Atmos, and these patterns can be used for Dolby Atmos-enabled speakers.

* Connection with an external amplifier required

■ 7.2.2/5.2.2/7.2ch Setting

This connection can be used for Multi-ZONE Music.

Purple speakers: connected with external amp
Green speakers: exclusive use (not simultaneous)

Pre-Amp Mode

LX89 LX79 LX59

Pre-amp Mode shuts down the power supply to the power amplifier, providing more clear and pure sound when using the AV receiver as a pre-amplifier.

Advanced Surround Modes

LX89 LX79 LX59

The AV receivers feature 10+1 Advanced Surround Modes — Action, Drama, Advanced Game, Sports, Classical, Rock/Pop, Front Stage Surround, Sound Retriever AIR (see page 10 for details), ECO Mode 1, ECO Mode 2 + Phones Surround — for an optimized sound for your entertainment.

Extended Stereo

LX89 LX79 LX59

The mode provides multi-channel sound from stereo sources, by delivering the L/R sound from all speakers.

Front Stage Surround Advance

LX89 LX79 LX59

With Front Stage Surround Advance, you can enjoy surround sound coming from only the front speakers and the subwoofer. Since wall reflections are not used, the setup is less dependent on the room environment, allowing front alignment of the speakers. Front Stage Surround Advance creates an excellent sound image and natural sound.

Optimum Surround

LX89 LX79 LX59

Dialogue, bass, and surround sound are the three elements of cinema sound. When soundtracks are played on a home cinema at a much lower volume, the impression may become quite different. Optimum Surround is a Pioneer-exclusive listening mode for solving this problem, developed through repeated interviews with actual film makers. For each scene, this technology automatically optimises the balance of the three elements with an original algorithm. Bring home the real thrills of the movie as intended by the creators.

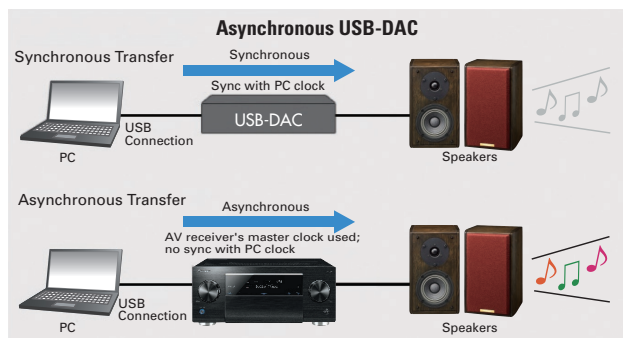

USB-DAC

LX89

The AV receiver allows direct USB connection with a computer*, without having to access the home network. What's more, signal transfer is done with USB asynchronous transfer mode, which controls the transfer process using its high-accuracy clock instead of syncing with the clock on the PC-side, ensuring high-quality sound reproduction. This eliminates jitter, reproducing master quality sound with extremely precise audio signals, even for Hi-bit32 Audio Processing.

* Driver download from Pioneer website required

HDMI® (4K@60, 3D, ARC)

LX89 LX79 LX59

Pioneer's latest AV receivers feature HDMI with 3D technology. You can enjoy the 3D Blu-ray Discs, games, and broadcasts by combining the AV receivers with a 3D compatible Blu-ray Disc player, game console, or tuner (STB) and display via HDMI connection. The Audio Return Channel (ARC) feature allows a TV with built-in tuner to send audio data "upstream" to the AV receiver via HDMI — so there's no need for a separate audio cable. Enjoy full-digital transfer of high-definition audio as well as up to 4K/60p video signals by HDMI connection. Multi-channel PCM (192 kHz), lossless bit-stream, and SACD audio can also be processed by HDMI single-cable connection.

Made for iPod and iPhone

LX89 LX79 LX59

The latest AV receivers are certified "Made for iPod and iPhone" products, letting you enjoy music from your iPod/iPhone. The included cable allows direct USB connection to the front panel, providing battery charge for your devices. The AV receivers are also compatible with video playback from iPod/iPhone.

* Supports iPhone 6, iPhone 6 Plus, iPhone 5s, iPhone 5c, iPhone 5, iPhone 4s, iPhone 4, iPhone 3GS, iPod touch 5G/4G, iPod nano 7G/6G/5G/4G

Android™ Audio/Video Playback with MHL 2™

LX89 LX79 LX59

One of the HDMI terminals is MHL 2 (Mobile High-Definition Link)

compatible, letting you connect an Android device with a MHL cable. High-definition and 3D video can be displayed on your HD or 3D TV with multi-channel sound, while also charging your device.

* MHL cable required

MHL Cable (optional)

Front USB Input

LX89 LX79 LX59

The front panel USB input terminal allows straightforward connection to a USB memory stick. This plug and play connectivity enables you to easily play music files or watch JPEG pictures.

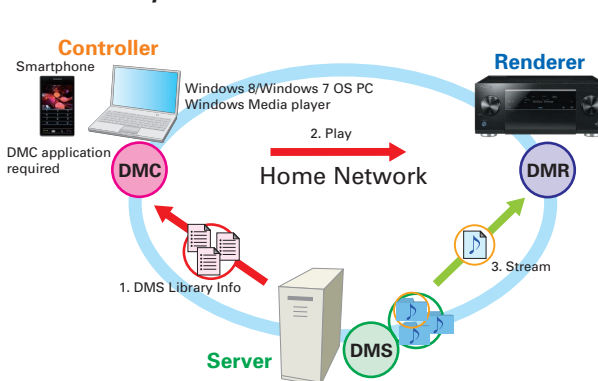

SC-LX89

DLNA Certified™ (1.5)**LX89 LX79 LX59**

The AV receivers are DLNA Certified™ (1.5), enabled to work not only as a Digital Media Player (2-Box Pull System) for playing DMS audio files, but also as a Digital Media Renderer (3-Box System) to be remotely controlled by a device such as a smartphone or PC/Mac. For example, you can play music content* from a PC/Mac in another room, from a separate device in your living room. As a DMR (2-Box Push System), the AV receivers can also play received audio data when the user controls the DMS. For details on playable formats, see chart on page 15.

**DMR**

* Depending on file structure and server capacity, it may not be possible to play certain files, including those listed as playable formats on page 15. Playback of DRM protected commercial content requiring DTCP-IP link protection is not supported.

DLNA 2-Box Pull System**DLNA 2-Box Push System****DLNA 3-Box System****Digital Media Server (DMS):**

Stores and distributes content to DMP/DMR
Example: PC

Digital Media Player (DMP):

Finds and plays content on DMS
Example: TV, stereo/home cinema, game console

Digital Media Controller (DMC):

Finds content on DMS for playback on DMR
Example: Internet tablet, Wi-Fi digital camera, PDA

Digital Media Renderer (DMR):

Plays content received from DMS, which finds content on DMS
Example: TV, AV receiver, remote speakers

AirPlay Wireless Audio**LX89 LX79 LX59**

AirPlay — Enthusiasts have complete access, control and playback of their entire iTunes music library wirelessly through their AV receiver. Users can quickly and easily enjoy all their music with song information and album art simultaneously displayed on a connected monitor/TV.

* Available features depend on iPod/iPhone/iPad model
For details on iPod compatibility, visit
<http://pioneer.jp/homeav/support/ios/eu>

AirPlay Connection Examples**HTC Connect™ Certified****LX89 LX79 LX59**

Pioneer is the first leading partner to provide HTC Connect certified devices. Through wireless transmission, HTC Connect lets you easily stream high-quality audio from compatible devices such as Android phones, with no need for a separate app.

**Compatible with Windows 8.1/Windows 8****LX89 LX79 LX59**

The AV receivers are compatible with Windows 8.1/Windows 8*, letting you easily stream music, video, or photos from compatible PCs on your home network.

* For SC-LX89

**Internet Radio (vTuner)****LX89 LX79 LX59**

The AV receivers come with the vTuner for listening to a multitude of radio programs from around the world on the internet. LAN connection allows radio access without having to use your PC/Mac. You can easily browse stations using the remote control. Various categories are available on the vTuner database, offering limitless entertainment. You can even add broadcast stations unavailable on the vTuner list. Access the Pioneer internet radio site from your PC/Mac*, and register the desired stations to your favorites list. Then, you can easily tune in to the radio stations from the AV receiver.

* Access code required

**Spotify® Digital Music-Streaming Service Ready****LX89 LX79 LX59**

Enjoy on-demand access to millions of songs with Spotify's digital music-streaming service. With the wide range of music selection, you're sure to find a fitting song for your mood or occasion, right at your fingertips. You can make your own choice, or let Spotify surprise you. The AV receivers are ready for the Connect from Spotify, which lets you select songs on your Spotify app for listening on your audio system.

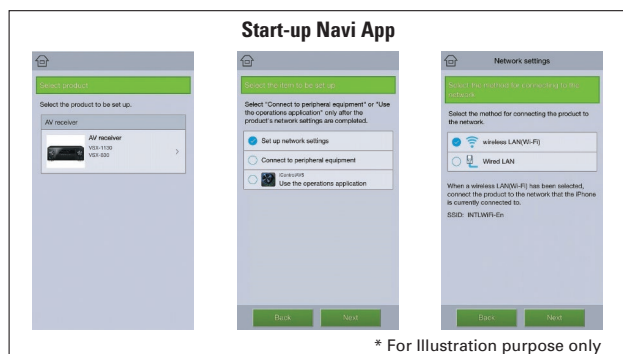

* Spotify App, iPhone/iPod touch/iPad, and subscription required.
For service availability in your country check www.spotify.com.

Ready for Start-up Navi App

LX89 LX79 LX59

A special app is available to help you easily set up the AV receiver via Wi-Fi with your smartphone. After opening the package, scan the QR code on the Quick Start Guide with your iPod touch/iPhone/iPad or Android device connected to your home network, and download the Start-up Navi app. As you proceed with the wizard, the network set-up for your AV receiver will be completed smoothly. Then, in coordination with the AVNavigator, the app lets you do all the initial settings of the AV receiver.

* For Illustration purpose only

Ready for iControlAV5

LX89 LX79 LX59

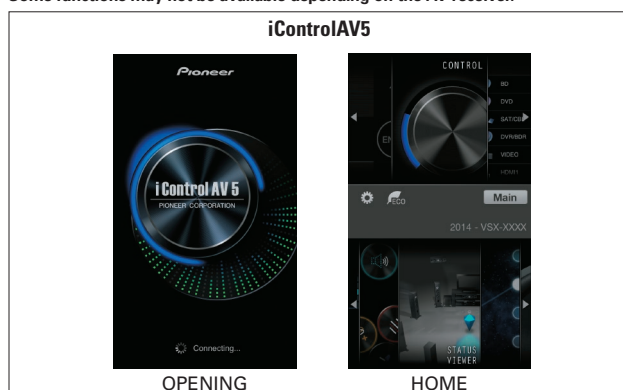

iControlAV5 is an iPod touch, iPhone and iPad application developed by Pioneer, freely downloadable from the App Store.

It is also compatible with Android, and available from Google Play. On a simple and intuitive interface, the application allows you to use your device as a remote for operating the AV receiver's functions such as VOLUME CONTROL, INPUT SELECT, LISTENING MODE, BALANCE, EMPHASIS CONTROL for woofer and center speakers, PUSH PLAYER, and ECO MANAGER. With the SOUND EXPLORER function, you can easily adjust various sound parameters in a fun and intuitive operation. You can also control the basic functions of Pioneer's Blu-ray Disc players.

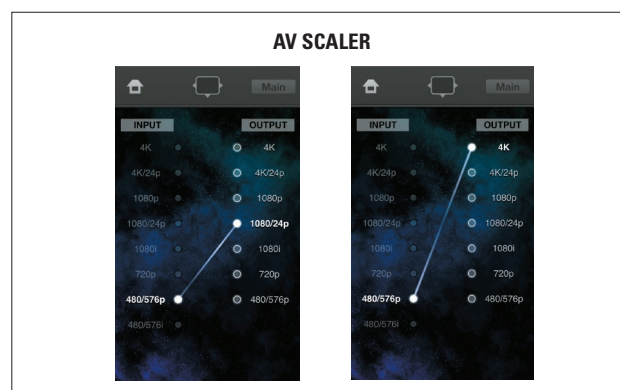

The latest version comes with improved user interface and new features including the AV SCALER, new STATUS VIEWER, and CURSOR.

* AV receiver needs to be connected to a wired LAN in a wireless LAN network. Some functions may not be available depending on the AV receiver.

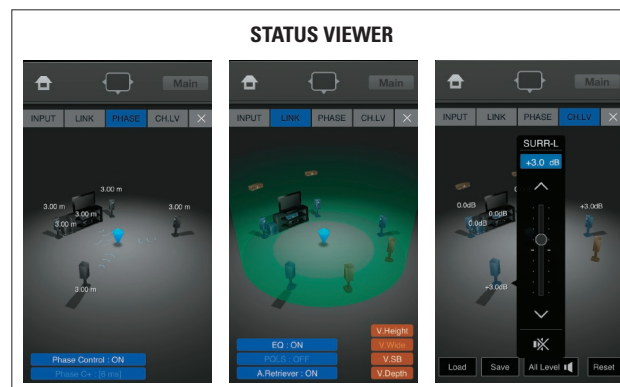

AV SCALER

The AV SCALER lets you easily select the input and output signals by drawing a line with your finger.

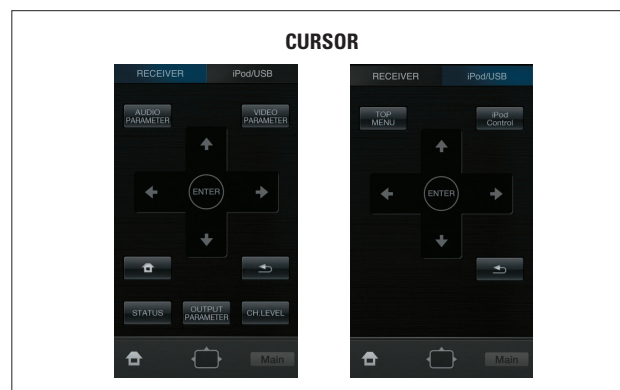

STATUS VIEWER

The new STATUS VIEWER provides graphical display of input/output and status of the playing content, and the image of both real and virtual speakers. You can enjoy intuitive control for Input, Link, Phase, and Channel Level.

CURSOR

For the currently used function, up/down/left/right operations can be done on the app, instead of using the remote control. The button display changes to correspond to the function on the AV receiver.

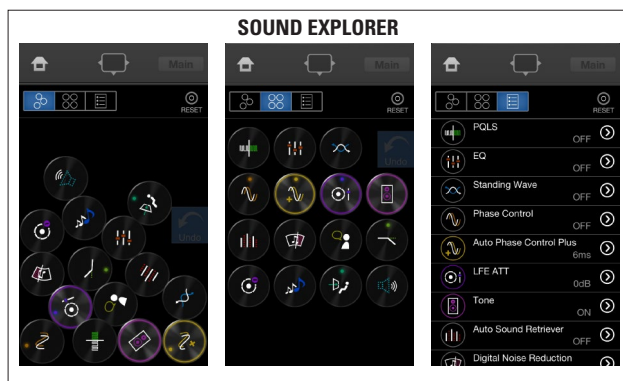

SOUND EXPLORER

SOUND EXPLORER lets you easily adjust various sound parameters with intuitive and pleasing operation. It comes in three operation modes. With Fixed Position mode, all icons are neatly positioned in rows. The screen on the playful Drop Icon mode displays continuously falling icons. All List mode shows the description and status for each setting, with a link to YouTube video clip explaining the feature.

Adjustable sound parameters include PQLS, EQ, Standing Wave Control, Phase Control, Auto Phase Control Plus, LFE ATT, Tone, Auto Sound Retriever, Digital Noise Reduction, Dialog Enhancement, X-Curve, Hi-bit24, and Virtual Speakers.

* Adjustable sound parameters differ by model.

ECO MANAGER

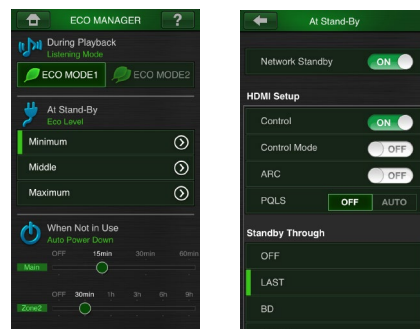

The feature is a dedicated page for energy efficient settings (During Playback/At Stand-By/When Not in Use) on your AV receiver. You can select ECO Mode 1 or 2 for playback settings.

ECO Mode

ECO Mode 1 features moderate energy saving operation while maintaining high-quality sound, ideal for CD music, 2ch audio files, and internet radio. The higher energy-saving ECO Mode 2 features moderate sound quality, suitable for content with dynamic sound such as movies (multi-ch/2ch) or live concerts. The ECO Mode can also be accessed from the front panel or the remote control.

ECO MANAGER for iPhone

PUSH PLAYER

You can directly stream music stored on your device for playback via the AV receiver.

CONTROL

You can turn the power on/off, adjust the volume, switch input/output, and change the listening mode settings.

BDP CONTROL

You can operate the basic functions of a connected Pioneer Blu-ray Disc player.

EMPHASIS

For setting the output level of Dialogue and Subwoofer/Bass.

BALANCE

You can adjust the multi-channel sweet spot for the listening position by moving the Balance Cursor (green ball).

FINGER EQ

Just stroke the screen with your finger to draw the EQ curve. You can change and save the EQ characteristics.

PUSH PLAYER

Music files stored on devices such as smartphones can be directly operated on the app, and streamed via Wi-Fi.

Built-in Bluetooth Wireless Technology

LX89 LX79 LX59

With the built-in **Bluetooth®** Wireless Technology (ver. 2.1+EDR), you can easily stream songs from compatible devices. The AV receivers feature Advanced Audio Distribution Profile (A2DP) and Audio/Video Remote Control Profile (AVRCP), with support for SBC and AAC codecs.

Built-in AVNavigator

LX89 LX79 LX59

Pioneer's AVNavigator is a user-friendly support feature for the AV receiver's wiring and operation, including the Wiring Navi and Interactive Operation Guide. AVNavigator is now built-in, and you can easily set up the AV receiver straight out of the box on your PC/Mac/iPad/smartphone. The software will start up via Windows Explorer on a PC or Bonjour on a Mac. With an iOS or Android device, you can access the AVNavigator from the pre-installed iControlAV5 app.

* The AV receiver and the PC/Mac/iPad/smartphone need to be on the same home network. Control is also available via LAN cable connection with a PC/Mac.

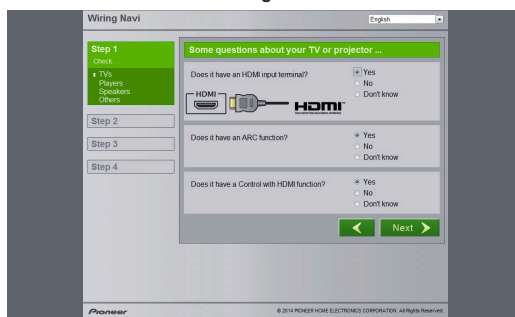

AVNavigator Top Menu

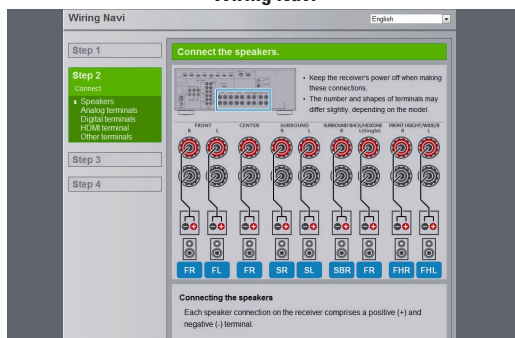

Wiring Navi

Start the Wiring Navi on the AVNavigator. By answering questions about your equipment and terminals, the actual connection image will be displayed. Plug in your equipment and speakers accordingly, including the network connection with your device then transmit the setup information to the AV receiver from your PC/Mac/iPad/smartphone.

Wiring Navi

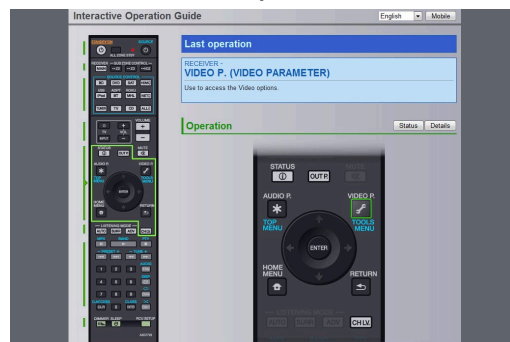

Wiring Navi

Interactive Operation Guide

After setup, you can check how to use the AV receiver with the Interactive Operation Guide. This new feature gives a quick tutorial on basic operations using illustrations and animations, allowing you to start right off without referring to the user manual. The Interactive Operation Guide can be browsed on your PC/Mac/iPad/smartphone, and you can send a command to the AV receiver. It also works the other way — key operation on the remote control or the main unit will display the corresponding manual page on your device.

Interactive Operation Guide

Built-in Dual Band Wi-Fi

LX89 LX79 LX59

Enjoy network features such as Hi-Res Audio streaming via wireless LAN connection. The built-in Wi-Fi is dual band, supporting both 5 GHz and 2.4 GHz frequency channels. By using the 5 GHz band, you can enjoy steady and uninterrupted streaming of large Hi-Res Audio files.

* Wi-Fi will turn off when wired LAN connection is established and network type wired is selected.

Powered HDMI ZONE Out (Powered HDZONE)

LX89 LX79 LX59

The AV receivers are equipped with HDZONE HDMI output terminal, for streaming HD audio/video content to a separate room. If unused for HDZONE, the terminal can be used for MAIN ZONE OUT 2. The new powered feature* uses the built-in amplifier, so you can enjoy audio in HDZONE by just connecting speakers, with no need for a separate amplifier.

* Requires speaker setting HDZONE

Powered HDMI ZONE (7.2ch + 2ch)

Powered HDMI ZONE (5.2ch + 2ch)

Multi-Zone (ZONE 2/3)

LX89 LX79 LX59

With Pioneer's Multi-Zone, you can play music from different sources in 2/3 zones at the same time.

SC-LX89/SC-LX-79/ SC-LX59	ZONE 2 audio, volume, and balance ZONE 3 audio, volume and balance
------------------------------	---

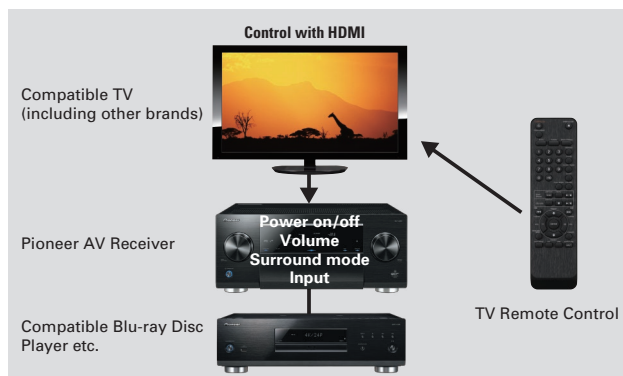

Control with HDMI

LX89 LX79 LX59

HDMI connection with compatible products allows the following linked operations:

- Volume adjustment/mute of AV receiver via TV
- Automatic input change when TV channel is switched or playback starts on a player
- Linked power on/off with TV

* For details on compatible TV and components, see http://pioneer.jp/homeav/support/hdmi_cec/

Pioneer PC Setup Application for Custom Installers

LX89 LX79 LX59

This Windows application is a dedicated tool for custom installers, and is not intended for end users. It allows you to access and edit AV receiver's settings through various connection methods. The settings can be stored as files for backup and data management.

Main Features:

- AV receiver default setting management (create, edit, overwrite, save)
- AV receiver control
- AV receiver status display on application
- "Detect difference" function for comparing edited data with backup
- Multiple backup functions

1. First (normal) backup stores latest setup
2. Second backup stores original settings by the installer

The second backup feature is especially useful when the user wants to revert back to the original settings made by the installer.

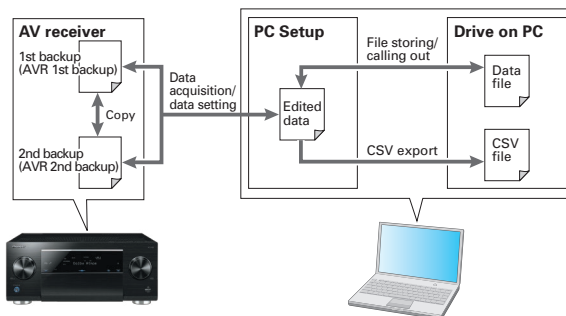

Ways to Connect to the AV Receiver

1. Via local LAN connection (auto/manual) for direct communication
2. Through the internet for remote operation
3. By COM port for data transmission by RS-232C connection
4. Opening a stored file
5. By stand-alone mode for displaying AV receiver's default values

Standby Pass-Through without CEC

LX89 LX79 LX59

With standby pass-through, the AV receiver can pass audio and video signals via HDMI even during standby. This feature is useful when you want to access HDMI-connected components without turning on the AV receiver.

* Control with HDMI needs to be turned off

HDMI Standby Input Switching

LX89 LX79 LX59

The function switches input source when the primary signal is cut off, and switches back to the primary input when the primary signal reappears.

Auto Power Down

LX89 LX79 LX59

The AV receiver will automatically turn off after being left uncontrolled for a certain time set by the user. This function is available for each zone.

Power Save for HDMI Standby Through

LX89 LX79 LX59

Power Save for HDMI Standby Through reduces energy consumption while the AV receiver is on standby.

Simple Overlay OSD

LX89 LX79 LX59

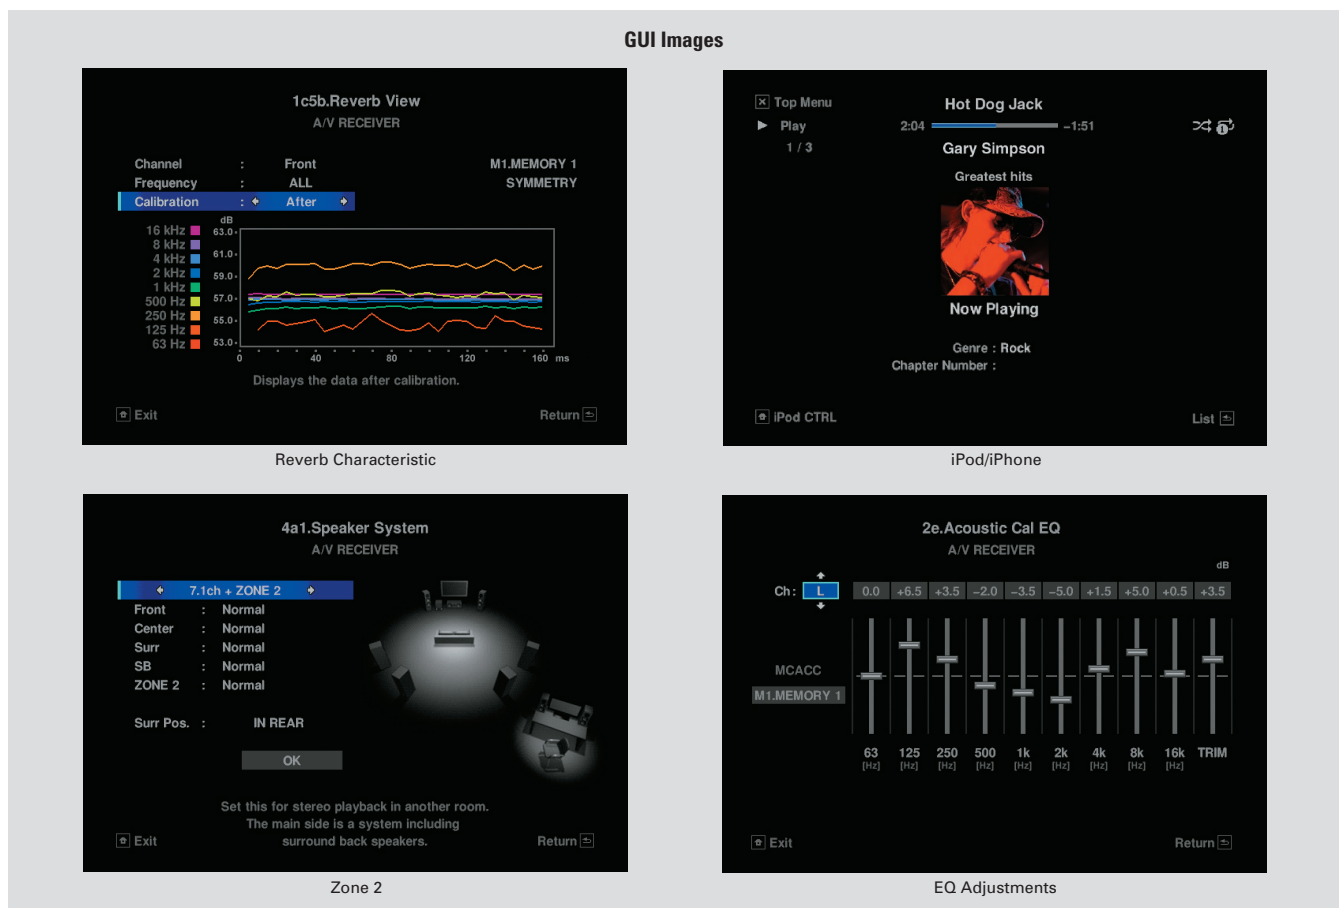

Even when the front FL display is not visible, users can see the AV receiver's operation status on the TV screen. The audio/video parameters can be adjusted while you actually listen to the sound or see the image — an useful feature if you use a projector, or have the AV receiver hidden inside a cabinet.

GUI for Smooth Operation

LX89 LX79 LX59

The GUI on the latest AV receivers has been further refined, resulting in enhanced ease-of-use. Each function has a dedicated GUI screen, displaying, for instance, iPod/iPhone data, speaker settings, or EQ adjustments, in 7 selectable languages — English, French, Italian, German, Spanish, Dutch, and Russian.

Advanced Direct Construction

LX89 LX79 LX59

Less is more in circuitry design. Advanced Direct Construction allows the shortest and simplest signal paths — from input to output, circuit block by circuit block — to reduce distortion that can be caused by transmission loss, and to improve sonic clarity.

Internal View (SC-LX89)

3D Space Frame Construction

LX89 LX79

The 3D Space Frame Construction is developed to clearly define the mechanical grounding of the chassis and make the structure strong enough to support heavy weight. Perfected by repeated CAE strength analysis and tests, this technology allows each part to deliver maximum performance. Interference is also reduced by separating and insulating the power supply, amp, analogue circuit, digital circuit and video sections from one another.

The AV receivers come with this Advanced 3D Space Frame structure, featuring precise framework design, separating the power supply block, and isolating the analogue video/audio and digital functional blocks into specific compartments. This reduces interference by flat cables between the blocks and improves the operating characteristics to accurately reproduce even the most delicate signals.

Rigid Trans-Stabilizer

LX89 LX79 LX59

The rigid trans-stabilizer acoustically insulates the transformer and eliminates unwanted vibration, enhancing sound clarity.

Rigid Trans-Stabilizer

Anti-Standing Wave Insulator

LX89 LX79 LX59

The new Anti-Standing Wave Insulator has been developed through repeated listening tests, featuring a special form with no parallel sides inside to prevent cavity resonance. This makes the sound localisation, tone, and scale clearer, while also enhancing the seamless connection between the channels, and the response to quick sound. The insulator enriches the realistic spatial description for movies, and the space representation of a concert hall for music sources.

Separated Pre and Power Amplifiers Blocks

LX89 LX79 LX59

Being compact and highly efficient, the Class D amplifier has allowed remarkably smaller heat sink and greater flexibility in circuit design and layout, and the ideal separate structure with independent pre and power amplifier blocks is realised. Additionally, the power supply for digital and analogue circuits has been isolated to provide clean power, significantly contributing to clear signal transmission which is the basis for high-quality sound.

Pre-amplifier Block

Power Amplifier Block

Clean Grounding with Insulated Dual Chassis

LX89 LX79 LX59

Steel plates shield the power amplifier block to eliminate unwanted noise caused by mutual interference, while Pioneer-original Insulated Dual Chassis connects the power amplifier's chassis to the main chassis via special insulators. The pre and power amplifier blocks are electrically separated, enabling the optimal ground design for each block. With thorough clean grounding and elimination of interference between the circuits and load changes, the sound quality and performance equivalent to separate amplifiers combined within a single chassis is achieved.

Insulators

9.2-Channel High Fidelity Class D Network AV Receiver

SC-LX89-K/-S

* Image after DTS:X firmware update

SC-LX89-K

SC-LX89-S

Enjoy precise audio reproduction, just as the creators intended with the flagship AV receiver featuring Direct Energy HD (High fidelity class D) amplifier, SABRE³² Ultra DAC, and AIR Studios Monitor Certification. Dolby Atmos® brings a new level of surround sound in the ideal environment made by Pioneer's MCACC Pro auto-room calibration, while the object-based DTS:X™ format will also be available with firmware update. Other highlights include video scaler with Super Resolution, Ultra HD Pass-through with HDCP 2.2, and USB-DAC.

AMPLIFICATION

- › Channels: 9
- › Amplification Type: Class D (Direct Energy HD)
- › 850 W Multi ch Simultaneous Drive (8 ohms, 1 kHz, THD 1.0 %)
- › 260 W/ch (4 ohms, 1 kHz, THD 1.0 %, 1ch Driven)
- › 220 W/ch (6 ohms, 1 kHz, THD 1.0 %, 1ch Driven)

CONSTRUCTION DESIGN

- › Advanced Direct Construction
- › Rigid Trans-Stabilizer
- › Insulated Dual Chassis
- › 3D Space Frame Construction
- › Low Leakage Flux Power Transformer
- › Anti-Standing Wave Insulator

AUDIO FEATURES

- › AIR Studios Monitor Certification
- › Dolby Atmos®/Dolby® TrueHD/Dolby Digital Plus/Dolby Surround
- › DTS:X/DTS Neural:X™ Ready*1
- › DTS-HD Master Audio/DTS-ES/DTS Neo:X/11.1
- › USB-DAC 192 kHz/32-bit with DSD Native Playback
- › DSD Direct Playback via Network/USB (2.8 MHz, 5.6 MHz/2ch)
- › DSD Disc (SACD) Playback via HDMI (2.8 MHz/5.1ch, 2ch)
- › SABRE³² Ultra DAC (ES9016S) for 9.2ch
- › Audio Scaler 192 kHz/32-bit Enhancer
- › MCACC Pro Room Calibration
 - Full Band Phase Control
 - Auto Phase Control Plus/Phase Control Plus
 - Standing Wave Control
 - 3D Time Axis Measurement
 - Precision Distance
 - Subwoofer EQ (4 Band)
 - Bass Management System for Dolby Atmos Enabled Speakers
- › Sound Enhancements
 - PQLS Bit-stream/Multi-Surround/2ch
 - Advanced Sound Retriever (Multi-ch)
 - Auto Sound Retriever/Auto Sound Retriever for ARC
 - Auto Level Control (Multi-ch)
 - Virtual Speakers (Wide/Height/Surround Back)
 - Rendering Mode

- › Advanced Surround Modes
 - Action, Drama, Advanced Game, Sports, Classical, Rock/Pop
 - Front Stage Surround
 - Sound Retriever Air, Phones Surround
 - ECO Mode 1, ECO Mode 2
- › Input Volume Absorber
- › Speaker System 15 Patterns Including 7 Patterns for Dolby Atmos

Video Features

- › Ultra HD Pass-through with HDCP 2.2 (4K/60p/4:4:4/24-bit, 4K/24p/4:4:4/36-bit, 4K/60p/4:2:2/36-bit)
- › Video Scaler (1080p to 4K) with Super Resolution
- › Triple HD Noise Reduction
- › Advanced Video Adjust
- › Stream Smoother/Stream Smoother Link

HOME NETWORK FEATURES

- › Apple AirPlay Certified
- › DLNA Certified™ (1.5)
- › HTC Connect™ Certified
- › Compatible with Windows® 8
- › Music File Playback/Seek via Network/USB: AIFF, Apple Lossless, WAV, FLAC, MP3, WMA, AAC, DSD
 - 192 kHz/24-Bit Audio playback (AIFF, Apple Lossless, WAV, FLAC)
 - Multi-Channel (5.1ch, 5.0ch) Audio Playback (WAV*2, FLAC*3)
- › Gapless Playback for AIFF, Apple Lossless, WAV, FLAC, AAC, MP3, DSD
- › Spotify® Digital Music-Streaming Service Ready*4
- › Internet Radio with vTuner

CONVENIENCE FEATURES

- › iPod Digital Transmission via Front USB Terminal
- › Android™ Audio/Video Playback with MHL™
- › Start-up Navi (Initial Setting App) Ready (iOS/Android)*5
- › AVNavigator (Wiring Navi/Interactive Operation Guide)
- › iControlAV5 Remote Control App Ready (iOS/Android)*5
- › HDMI ZONE Out (HDZONE)
- › Built-in Wi-Fi® (Dual Band 5 GHz/2.4 GHz)
- › Built-in Bluetooth® Wireless Technology (Version: 2.1 + EDR, Profile: A2DP/AVRCP, Codec: SBC/AAC)
- › Power Save for HDMI Standby Through
- › Learning Remote Control (Luminous)

FRONT TERMINALS

- › HDMI 1 in
- › USB 1 in for iPod/iPhone, USB drive
- › MCACC Setup MIC in
- › Phones 1 out

REAR TERMINALS

- › HDMI 7 in (7 assignable, 1 for HDMI/MHL)
- › HDMI 3 out (2 for MAIN, 1 for MAIN/HDZONE)
- › Ethernet 1 In

- › AV (Composite) 2 In/1 Out
- › Audio 1 In (assignable)
- › Phono (MM) 1 In
- › Digital Coaxial 2 In (assignable)
- › Digital Optical 2 In (assignable)/1 Out
- › USB-DAC In (B-Type)
- › Component Video 2 In (assignable)
- › Monitor Component 1 Out/Monitor Composite 1 Out
- › Preout 11.2 ch (13.2 ch terminals)
- › Speaker 11 ch Out
- › Independent Dual Subwoofer

- › IR 2 In/1 Out
- › 12 V Trigger x 2/RS-232C

SPECIFICATIONS

- › Power Requirements: AC 220-230 V, 50/60 Hz
- › Power Consumption/Standby: 370 W/0.1 W
- › Dimensions (W x H x D): 435 x 185 x 441 mm
- › Weight: 18.1 kg

*1 Firmware update required *2 Up to 192 kHz streams via USB, up to 96 kHz streams via wired LAN, up to 48 kHz via wireless LAN *3 Up to 96 kHz streams

SC-LX89-K/SYXJ8

SC-LX89-S/SYXJ8

Direct Energy HD Amplifier

For the ideal multi-channel environment, all channels should have the same speakers, driven by the same amplifier, under same conditions. So for the SC-LX89-K/-S, Pioneer has adopted the Direct Energy HD Amplifier capable of simultaneous high-power output for all channels. The core Direct Power FET has a simple structure with the semiconductor chip directly mounted on the circuit board. As a result, a large reduction in inductance components for improved signal quality, smaller heat sink by efficient heat dissipation, and shorter transmission path by cleaner circuitry have been achieved, realizing quality sound, high-power output, and high efficiency at the same time. As the Direct Energy HD Amplifier continues to improve by each generation, it creates the ideal reproduction environment for object audio as well as legacy formats.

Direct Power FET on Direct Energy HD Amplifier

Direct Power FET Structure

DTS:X Ready

DTS:X is the next-generation audio codec from DTS that leverages object-based audio to enable new immersive and interactive audio experiences. Since DTS:X can automatically adapt the audio to the existing channels and speakers system, no specific speaker layout is required. Experience an immersive soundscape with incredibly rich and life-like audio. With the ideal reproduction environment created by MCACC Pro, and the powerful and precise multi-channel output by the Direct Energy HD Amplifier, the SC-LX89-K/-S maximises the advantages of the DTS:X format.

* DTS:X will be available with firmware update.

Dolby Atmos®

The SC-LX89-K/-S is compatible with the 7.2.4ch*, 9.2.2ch*, 7.2.2ch, 5.2.4ch configurations of Dolby Atmos®. You can reproduce object-oriented sound in smooth, curving movements, or the realistic three-dimensional movement overhead by the top speakers. However, the appropriate playback environment is required to bring out the best from Dolby Atmos. This is provided by MCACC Pro, which allows the most precise speaker drive for faithful reproduction of the true-to-life soundscape of Dolby Atmos. With synchronised sound and image, you can experience total immersion in the movie world.

* External amplifier required

Full Band Phase Control

Pioneer's Phase Control technology effectively eliminates phase lag and significantly improves the multi-channel sound without any extra operation. Furthermore, the Full Band Phase Control technology focuses on the group delay in the speaker network filter, and adjusts the phase of each unit as well as the group delay for each speaker. Multi-range speakers gain the sound coherence of full-range speakers, while retaining the wide frequency range advantage. In an environment where the phase of all units and all channels are precisely controlled, a remarkably clear sound location with a surrounding feel is achieved. In combination with MCACC Pro's auto room tuning technology, the ideal multi-channel reproduction environment can be created, which faithfully replicates object audio and the intention of the directors.

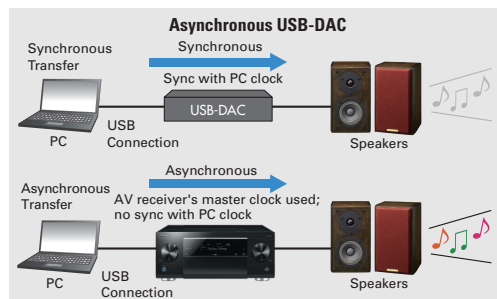

ESS SABRE³² Ultra DAC

The highly acclaimed 192 kHz/32-bit ESS SABRE³² Ultra DAC (ES9016S) delivers exceptional sound with ultra-low distortion and high S/N ratio. It offers jitter-free performance for an astounding audio reproduction with rich deep bass.

USB-DAC

The SC-LX89-K/-S allows direct USB connection with a computer by USB asynchronous signal transfer, which eliminates jitter and reproduces master quality sound with extremely precise audio signals. Native DSD playback is also supported.

Available with firmware update

ESS SABRE³² Ultra DAC

The highly acclaimed 192 kHz/32-bit ESS SABRE³² Ultra DAC (ES9016S) delivers exceptional sound with ultra-low distortion and high S/N ratio. It offers jitter-free performance for an astounding audio reproduction with rich deep bass.

AIR Studios Certification

The AV receiver has been tested by the professionals at AIR Studios and received the Monitor Certification. Pioneer's perfect application of the world-famous dubbing studio's monitoring methods intensifies the emotion and excitement of what you see and hear. Established in 1969 in London, AIR Studios is a state-of-the-art recording complex, favored by many of the world's most popular and renowned musical talents.

9.2-Channel High Fidelity Class D Network AV Receiver

SC-LX59-K/-S

SC-LX59-K

SC-LX59-S

* Image after DTS:X firmware update

Enjoy precise audio reproduction, just as the creators intended with the AV receiver featuring Direct Energy HD (High fidelity class D) amplifier and SABRE³² Ultra DAC. Dolby Atmos® brings a new level of surround sound in the ideal environment made by Pioneer's MCACC Pro auto-room calibration with Full Band Phase Control, while the object-based DTS:X™ format will also be available with firmware update. Other highlights include video scaler with Super Resolution, Ultra HD Pass-through with HDCP 2.2, and aluminium front panel.

AMPLIFICATION

- › Channels: 9
- › Amplification Type: Class D (Direct Energy HD)
- › 760 W Multi ch Simultaneous Drive (8 ohms, 1 kHz, THD 1.0 %)
- › 240 W/ch (4 ohms, 1 kHz, THD 1.0 %, 1ch Driven)
- › 190 W/ch (6 ohms, 1 kHz, THD 1.0 %, 1ch Driven)

CONSTRUCTION DESIGN

- › Advanced Direct Construction
- › Rigid Trans-Stabilizer
- › Insulated Dual Chassis
- › Anti-Standing Wave Insulator

AUDIO FEATURES

- › Dolby Atmos®/Dolby® TrueHD/Dolby Digital Plus/Dolby Surround
- › DTS:X/DTS Neural:X™ Ready*1
- › DTS-HD Master Audio/DTS-ES/DTS Neo:X11.1
- › DSD Direct Playback via Network/USB (2.8 MHz, 5.6 MHz/2ch)
- › DSD Disc (SACD) Playback via HDMI (2.8 MHz/5.1ch, 2ch)
- › SABRE³² Ultra DAC (ES9016S) for 9.2ch
- › Audio Scaler 192 kHz/32-bit Enhancer
- › MCACC Pro Room Calibration
 - Full Band Phase Control
 - Auto Phase Control Plus/Phase Control Plus
 - Standing Wave Control
 - 3D Time Axis Measurement
 - Subwoofer EQ (4 Band)
 - Bass Management System for Dolby Atmos Enabled Speakers
- › Sound Enhancements
 - PQLS Bit-stream/Multi-Surround/2ch
 - Advanced Sound Retriever (Multi-ch)
 - Auto Sound Retriever/Auto Sound Retriever for ARC
 - Auto Level Control (Multi-ch)
 - Virtual Speakers (Wide/Height/Surround Back)
 - Rendering Mode
- › Advanced Surround Modes
 - Action, Drama, Advanced Game, Sports, Classical, Rock/Pop
 - Front Stage Surround
 - Sound Retriever Air, Phones Surround
 - ECO Mode 1, ECO Mode 2

- › Input Volume Absorber
- › Speaker System 15 Patterns Including 7 Patterns for Dolby Atmos

Video Features

- › Ultra HD Pass-through with HDCP 2.2 (4K/60p/4:4:4/24-bit, 4K/24p/4:4:4/36-bit, 4K/60p/4:2:2/36-bit)
- › Video Scaler (1080p to 4K) with Super Resolution
- › Triple HD Noise Reduction
- › Advanced Video Adjust
- › Stream Smoother/Stream Smoother Link

HOME NETWORK FEATURES

- › Apple AirPlay Certified
- › DLNA Certified™ (1.5)
- › HTC Connect™ Certified
- › Compatible with Windows® 8.1
- › Music File Playback/Seek via Network/USB: AIFF, Apple Lossless, WAV, FLAC, MP3, WMA, AAC, DSD
 - 192 kHz/24-Bit Audio playback (AIFF, Apple Lossless, WAV, FLAC)
 - Multi-Channel (5.1ch, 5.0ch) Audio Playback (WAV*2, FLAC*3)
- › Gapless Playback for AIFF, Apple Lossless, WAV, FLAC, AAC, MP3, DSD
- › Spotify® Digital Music-Streaming Service Ready*4
- › Internet Radio with vTuner

CONVENIENCE FEATURES

- › iPod Digital Transmission via Front USB Terminal
- › Android™ Audio/Video Playback with MHL™
- › Start-up Navi (Initial Setting App) Ready (iOS/Android)*5
- › AVNavigator (Wiring Navi/Interactive Operation Guide)
- › iControlAV5 Remote Control App Ready (iOS/Android)*5
- › HDMI ZONE Out (HDZONE)
- › Built-in Wi-Fi® (Dual Band 5 GHz/2.4 GHz)
- › Built-in Bluetooth® Wireless Technology (Version: 2.1 + EDR, Profile: A2DP/AVRCP, Codec: SBC/AAC)
- › Power Save for HDMI Standby Through
- › Learning Remote Control (Luminous)

FRONT TERMINALS

- › HDMI 1 in
- › USB 1 in for iPod/iPhone, USB drive
- › MCACC Setup MIC in
- › Phones 1 out

REAR TERMINALS

- › HDMI 7 in (7 assignable, 1 for HDMI/MHL)
- › HDMI 3 out (2 for MAIN, 1 for MAIN/HDZONE)
- › Ethernet 1 In

- › AV (Composite) 2 In/1 Out
- › Audio 1 In (assignable)
- › Digital Coaxial 2 In (assignable)
- › Digital Optical 2 In (assignable)/1 Out
- › Component Video 1 In (assignable)
- › Monitor Composite 1 Out
- › Preout 11.2 ch (13.2 ch terminals)
- › Speaker 11 ch Out
- › Independent Dual Subwoofer
- › IR 2 In/1 Out
- › 12 V Trigger x 2/RS-232C

SPECIFICATIONS

- › Power Requirements: AC 220-230 V, 50/60 Hz
- › Power Consumption/Standby: 330 W/0.1 W
- › Dimensions (W x H x D): 435 x 185 x 441 mm
- › Weight: 15.3 kg

*1 Firmware update required *2 Up to 192 kHz streams via USB, up to 96 kHz streams via wired LAN, up to 48 kHz via wireless LAN *3 Up to 96 kHz streams

*4 For service availability in your country, check www.spotify.com *5 Available for free download from the App Store/the Google Play™

SC-LX59-K/SYXJ8

SC-LX59-S/SYXJ8

Direct Energy HD Amplifier

For the ideal multi-channel environment, all channels should have the same speakers, driven by the same amplifier, under same conditions. So for the SC-LX59-K/-S, Pioneer has adopted the Direct Energy HD Amplifier capable of simultaneous high-power output for all channels. The core Direct Power FET has a simple structure with the semiconductor chip directly mounted on the circuit board. As a result, a large reduction in inductance components for improved signal quality, smaller heat sink by efficient heat dissipation, and shorter transmission path by cleaner circuitry have been achieved, realizing quality sound, high-power output, and high efficiency at the same time. As the Direct Energy HD Amplifier continues to improve by each generation, it creates the ideal reproduction environment for object audio as well as legacy formats.

Direct Power FET on Direct Energy HD Amplifier

Direct Power FET Structure

DTS:X Ready

DTS:X is the next-generation audio codec from DTS that leverages object-based audio to enable new immersive and interactive audio experiences. Since DTS:X can automatically adapt the audio to the existing channels and speaker system, no specific speaker layout is required. Experience an immersive soundscape with incredibly rich and life-like audio. With the ideal reproduction environment created by MCACC Pro, and the powerful and precise multichannel output by the Direct Energy HD Amplifier, the SC-LX59-K/-S maximises the advantages of the DTS:X format.

* DTS:X will be available with firmware update.

Dolby Atmos®

The SC-LX59-K/-S is compatible with the 7.2.4ch*, 9.2.2ch*, 7.2.2ch, 5.2.4ch configurations of Dolby Atmos®. You can reproduce object-oriented sound in smooth, curving movements, or the realistic three-dimensional movement overhead by the top speakers. However, the appropriate playback environment is required to bring out the best from Dolby Atmos. This is provided by MCACC Pro, which allows the phase for all frequencies of each speaker, allowing the most precise speaker drive for faithful reproduction of the true-to-life soundscape of Dolby Atmos. With synchronised sound and image, you can experience total immersion in the movie world.

* External amplifier required

Speaker Layout Example of a Dolby Atmos Home Cinema (7.2.4ch)

Full Band Phase Control

Pioneer's Phase Control technology effectively eliminates phase lag and significantly improves the multi-channel sound without any extra operation. Furthermore, The Full Band Phase Control technology focuses on the group delay in the speaker network filter, and adjusts the phase of each unit as well as the group delay for each speaker. Multi-range speakers gain the sound coherence of full-range speakers, while retaining the wide frequency range advantage. In an environment where the phase of all units and all channels are precisely controlled, a remarkably clear sound location with a surrounding feel is achieved. In combination with MCACC Pro's auto room tuning technology, the ideal multi-channel reproduction environment can be created, which faithfully replicates object audio and the intention of the directors.

ESS SABRE³² Ultra DAC

The highly acclaimed 192 kHz/32-bit ESS SABRE³² Ultra DAC (ES9016S) delivers exceptional sound with ultra-low distortion and high S/N ratio. It offers jitter-free performance for an astounding audio reproduction with rich deep bass.

Spotify® Digital Music-Streaming Service Ready

Enjoy on-demand access to millions of songs with Spotify's digital music-streaming service. With the wide range of music selection, you're sure to find a fitting song for your mood or occasion, right at your fingertips. You can make your own choice, or let Spotify surprise you. The SC-LX59-K/-S is ready for the Connect from Spotify, which lets you select songs on your Spotify app for listening on your audio system. * Spotify App, iPhone/iPod touch/iPad, and subscription required.
