

iTub LENA

Professional for everyday care

Bathing relaxes the body and soul

— all the more so when you have to live with a physical limitation. The development of the LENA lifting bathtub was motivated by the need to relieve the patient's fear of a nursing tub. In the construction and design of the tub, the needs of the user and the caregiver were implemented.

Professional technology and a modern appearance contribute to a harmonious environment in the care bathroom. State-of-the-art, yet trouble-free technology, as well as the simplest handling, are the guarantee for safe and efficient work.

The intelligent iTub thermostat control ensures safety at the highest level - in addition to many comfort features, the tub monitors the temperature of the main tub inlet, the incoming water through the hand shower, as well as the water in the tub to keep an eye on the patient's safety at all times.

Your benefits at a glance

Standard equipment:
