Important User Information

Read this document and the documents listed in the additional resources section about installation, configuration, and operation of this equipment before you install, configure, operate, or maintain this product. Users are required to familiarize themselves with installation and wiring instructions in addition to requirements of all applicable codes, laws, and standards.

Activities including installation, adjustments, putting into service, use, assembly, disassembly, and maintenance are required to be carried out by suitably trained personnel in accordance with applicable code of practice.

If this equipment is used in a manner not specified by the manufacturer, the protection provided by the equipment may be impaired.

In no event will Rockwell Automation, Inc. be responsible or liable for indirect or consequential damages resulting from the use or application of this equipment.

The examples and diagrams in this manual are included solely for illustrative purposes. Because of the many variables and requirements associated with any particular installation, Rockwell Automation, Inc. cannot assume responsibility or liability for actual use based on the examples and diagrams.

No patent liability is assumed by Rockwell Automation, Inc. with respect to use of information, circuits, equipment, or software described in this manual.

Reproduction of the contents of this manual, in whole or in part, without written permission of Rockwell Automation, Inc., is prohibited.

Throughout this manual, when necessary, we use notes to make you aware of safety considerations.

WARNING: Identifies information about practices or circumstances that can cause an explosion in a hazardous environment, which may lead to personal injury or death, property damage, or economic loss.

ATTENTION: Identifies information about practices or circumstances that can lead to personal injury or death, property damage, or economic loss. Attentions help you identify a hazard, avoid a hazard, and recognize the consequence.

IMPORTANT Identifies information that is critical for successful application and understanding of the product.

Labels may also be on or inside the equipment to provide specific precautions.

SHOCK HAZARD: Labels may be on or inside the equipment, for example, a drive or motor, to alert people that dangerous voltage may be present.

BURN HAZARD: Labels may be on or inside the equipment, for example, a drive or motor, to alert people that surfaces may reach dangerous temperatures.

ARC FLASH HAZARD: Labels may be on or inside the equipment, for example, a motor control center, to alert people to potential Arc Flash. Arc Flash will cause severe injury or death. Wear proper Personal Protective Equipment (PPE). Follow ALL Regulatory requirements for safe work practices and for Personal Protective Equipment (PPE).

About This Publication

This document serves as a guide for replacing your existing SLC™ 500 modules with other products such as Compact I/O™ modules, or Compact 5000™ I/O modules.

The SLC 500 Control system hardware was redesigned to be RoHS compliant. As a result, several of the products will continue to be available for years to come, however, some products, such as less capable controllers and lower density I/O, have been discontinued.

The SLC™ control platform in general is in the Active Mature lifecycle state, as the newer CompactLogix™ and Compact 5000 platforms provide greater functionality and connectivity.

The following chapters of this document describe the many SLC, CompactLogix, and I/O options available for active management of your installed base of control products. You have the option of maintaining, migrating, or replacing that installed base in a phased manner to meet your needs.

This document focuses on hardware migration. For more detailed information, including instructions for converting an SLC program to a Logix program, see SLC to CompactLogix Programming Migration Application Profile, publication [5069-AP001](#).

Audience

This document is intended for users of SLC 500 controllers and I/O modules who are familiar with the RSLogix 500® programming software.

Required Software

If the replacement is an SLC 500 controller or I/O module, no additional software is required.

If the replacement is a CompactLogix 5370 controller, CompactLogix 5380 controller, Compact I/O module, or Compact 5000 I/O module, the following are required:

- **Studio 5000 environment**

The Studio 5000® environment combines elements of design into one standard framework that optimizes productivity and reduces time to commission.

With the Studio 5000 Applications you can:

- Build and maintain a system layout in a central place with **Studio 5000 Architect®**
- Configure, program, and maintain your Logix 5000™ family of controllers with **Studio 5000 Logix Designer®**
- Create intuitive, modern screens for the PanelView™ 5000 graphic terminals with **Studio 5000 View Designer®**

- Create and leverage reusable libraries of content for rapid project development with **Application Code Manager**

The following CompactLogix controllers are compatible with Studio 5000 Applications:

Controllers	Cat. No.	Studio 5000 Logix Designer Application
CompactLogix 5380 / Compact GuardLogix 5380	5069-L306ER, 5069-L306ERM, 5069-L310ER, 5069-L310ERM, 5069-L310ERNSE, 5069-L320ER, 5069-L320ERM, 5069-L320ERMK, 5069-L330ER, 5069-L330ERM, 5069-L330ERMK, 5069-L340ER, 5069-L340ERM, 5069-L350ERM, 5069-L350ERMK, 5069-L380ERM, 5069-L3100ERM 5069-L306ERS2, 5069-L306ERMS2, 5069-L310ERS2, 5069-L310ERMS2, 5069-L320ERS2, 5069-L320ERMS2, 5069-L330ERS2, 5069-L330ERMS2, 5069-L340ERS2, 5069-L340ERMS2, 5069-L350ERS2, 5069-L350ERMS2, 5069-L380ERS2, 5069-L380ERMS2, 5069-L3100ERS2, 5069-L3100ERMS2, 5069-L320ERS2K, 5069-L320ERMS2K, 5069-L330ERS2K, 5069-L330ERMS2K, 5069-L350ERS2K, 5069-L350ERMS2K	Version 29.00.00 or later

- **RSLogix 500/RSLogix Micro version 12 or RSLogix Project Migrator**

The RSLogix 500/RSLogix™ Micro version 12 software includes an integrated SLC to CompactLogix program converter tool. To convert, simply perform a Save Program As, then select file type as *.ACD, and fill out the menu prompts.

For older versions of RSLogix 500/RSLogix Micro, the RSLogix Project Migrator tool is a free, standalone software tool for converting an RSLogix 5 or RSLogix 500 project export file for import into Studio 5000 Logix Designer application.

The standalone converter tool is available for download at: rok.auto/pcdc.

Summary of Changes

This publication contains the following new or updated information. This list includes substantive updates only and is not intended to reflect all changes.

Overview

Product Lifecycle Status Website

The Rockwell Automation Product Lifecycle Status website allows you to proactively plan and manage the transition from existing equipment to leading-edge products and technologies. Using the search tool, you can view up-to-date product lifecycle status and identify the most contemporary Rockwell Automation products.

The product lifecycle status may be Active, Active Mature, End of Life, or Discontinued.

To view the lifecycle information for a product:

1. On your web browser, open the Product Lifecycle Status website:
<https://www.rockwellautomation.com/en-us/support/product-compatibility-migration/product-lifecycle-status.html>.
2. In the Catalog Number field, enter the catalog number of the product.

3. Click Search.
The product lifecycle data displays.

If the lifecycle status of the product is End of Life or Discontinued, you can view the recommended replacement.

SLC 500 System

The SLC 500 system is a small chassis-based family of programmable controllers, discrete, analog, and specialty I/O, and peripheral devices. The SLC 500 family delivers power and flexibility with a wide range of communication configurations, features, and memory options.

SLC 500 programmable controllers provide value with extensive capabilities to address a broad range of applications including material handling, HVAC control, high-speed assembly operations, small process control, simple motion control, and SCADA. With SLC 500 Modular Hardware Style controllers, you select the processor, power supply, and I/O modules to fit your application. Modular style chassis are available in 4, 7, 10, and 13-slot versions.

Digital I/O modules, analog I/O modules, and specialty temperature, counting, and process control modules are available to help you create a custom solution for your application.

CompactLogix 5370 Controllers

CompactLogix 5370 controllers provide scalable controller solutions to address a wide variety of applications. All CompactLogix 5370 controllers provide the following functionality:

- Two EtherNet/IP™ ports
- One USB port
- Support for local expansion modules
- Control of local and distributed I/O modules
- Use of 1784-SD1 or 1784-SD2 Secure Digital (SD) card for nonvolatile memory
- A battery is no longer necessary because of the internal energy-storage solution

Some CompactLogix 5370 controllers provide the following functionality:

- Built-in power supply
- Some combination of embedded digital, analog, and high-speed counter modules
- Support for Integrated Motion over an EtherNet/IP network
- Access to DeviceNet® networks.

CompactLogix 5380 Controllers

CompactLogix 5380 controllers can operate in various applications that range from standalone systems or in more complex systems with devices that are connected to the controller via an EtherNet/IP network. All CompactLogix 5380 controllers provide the following functionality:

- Two EtherNet/IP ports
- One USB port
- Support for local expansion modules
- Control of local and distributed I/O modules
- Support Device Level Ring (DLR), Star, and Linear EtherNet/IP network topologies.
- Support up to 180 EtherNet/IP nodes, depending on catalog number.
- Support Linear/DLR and Dual-IP EtherNet/IP modes.

- Support Generic ASCII, Modbus RTU/ASCII, and legacy DF1 and DH-485 protocols.

Some CompactLogix 5380 controllers provide the following functionality:

- Support for Integrated Motion up to 32 axes over an EtherNet/IP network

Compact I/O Modules

The Compact I/O modules can be used in the following applications:

- With a CompactLogix controller
- In an assembly with a 1769-ADN DeviceNet adapter
- In an assembly with a 1769-AENTR Ethernet adapter.

Each I/O module includes a built-in removable terminal block with fingersafe cover for connections to I/O sensors and actuators. The terminal block is behind a door at the front of the module. I/O wiring can be routed from beneath the module to the I/O terminals.

- Once the modules are locked together, the system becomes a rugged assembly.
- Upper and lower tongue-and-groove slots guide the module during installation and secure the module within the system.
- Removable terminal blocks help ease the wiring task.
- Self-lifting, field-wire pressure plates cut installation time.
- The patented bus connector with the lock function enables consistent system communication.
- A color bar is provided on the front of the module.
- Digital and field circuits are optically isolated.

Compact 5000 I/O Modules

The Compact 5000 I/O architecture provides a wide range of input and output modules to span many applications, from high-speed digital to process control. The architecture uses Producer/Consumer technology that allows input information and output status to be shared among multiple Logix 5000 controllers.

Compact 5000 I/O systems are used as local I/O modules in CompactLogix 5380 controller systems or as remote I/O modules with CompactLogix 5380 controllers and some other Logix 5000 controllers. The modules are configured with the Studio 5000 Logix Designer application.

The serial module provides two independent channels that function as network interface using RS232C, RS422, or RS485 to serial devices communicating on Generic ASCII, Modbus RTU/ASCII, DF1, or DH-485 protocol.

The I/O module requires a removable terminal block (RTB) to connect field-side wiring. RTBs are not included with the I/O modules. You must order RTBs separately.

Power Considerations

SLC 500 Controllers

The SLC 500 controllers require an SLC power supply module on the leftmost slot to provide power to all modules on the chassis. This powers up the controller and the I/O modules. This also facilitates communication through the backplane.

Though all 1746 input modules and most 1746 output modules receive the necessary power that they need from the backplane, some 1746 output modules, such as relay modules and AC modules, require additional power to be supplied to the module terminal block.

CompactLogix 5380 Controllers

The CompactLogix 5380 controllers require a 24V DC source supply that is connected to the MOD power terminal to provide power to all modules. Unlike the SLC 500 controller, the CompactLogix 5380 controller does not require a chassis.

Backplane connection is at the side of each module and it is necessary to cover the side with a 5069-ECR end cap (shipped with the CompactLogix 5380 controllers and Compact 5000 EtherNet/IP adapters) to help prevent electrical hazards.

The 24V DC source to MOD power terminal can be from any external power supply. You do not require additional power supply connections to each I/O module⁽¹⁾ if connecting field devices are in the same operating voltage range.

For more information about MOD power and SA power considerations, see chapter 2 of the CompactLogix 5380 and Compact GuardLogix® 5380 Controllers User Manual, [5069-UM001](#).

(1) Except for 5069-OB8, 5069-OB16 and 5069-OB16F.

Sensor Actuator Power for CompactLogix 5380

The CompactLogix 5380 I/O power system has a common sensor actuator (SA) bus where a single power source can be shared among all attaching I/O modules using the backplane. This helps reduce wiring effort and is convenient if all I/O devices operate at the same operating voltage. If the SA has two different operating voltages (see following figures), the SA power bus can be separated with a Field Potential Distributor Module, such as the 5069-FPD.

The CompactLogix 5380 I/O power system if sensors/actuators have a common operating voltage.

The CompactLogix 5380 I/O power system if sensors/actuators have different operating voltages.

IMPORTANT The 5069-0W16 module uses DC SA power. You must connect DC power to the component, that is, controller, adapter, or field potential distributor, that provides SA power to the module.

Other Considerations

The SLC 500 system was designed more than 30 years ago and electronic components have evolved over time. To help avoid potential electromagnetic interference (EMI) and transient EMI that could cause problems in your existing system conversion, see the Industrial Automation Wiring and Grounding Guidelines, publication [1770-IN041](#).

To fully migrate your SLC 500 systems you also need to convert your SLC 500 application code. For more information on software conversion, see the SLC to CompactLogix Programming Migration Application Profile, publication [5069-AP001](#).

Replace an SLC 500 Controller

This chapter provides information about the recommended replacement for your existing SLC 500 controller.

Due to the discontinuation of SLC 5/01 and SLC 5/02 controllers in January 2017, a replacement CompactLogix controller is recommended.

You can view the lifecycle status of your SLC product on the Rockwell Automation Product Lifecycle Status website:

<https://www.rockwellautomation.com/en-us/support/product/product-compatibility-migration/product-lifecycle-status.html>.

Upgrade to a CompactLogix 5370 Controller

[Table 1](#) lists the recommended replacement CompactLogix 5370 controller to your existing SLC 500 controller. These recommendations exclude Motion and Safety applications, consult your local sales office for more info.

(1) To include safety on the control, you can upgrade any recommended CompactLogix 5380 replacement controller to Compact GuardLogix 5380 SIL 2 and Compact GuardLogix 5380 SIL 3 safety controllers.

(2) The general rule of thumb for memory estimation can be found under "SLC to Logix Memory Comparison" in the SLC to CompactLogix Programming Migration Application Profile, publication [5069-AP001](#). Alternatively, you can validate the controller based on memory estimation by the code conversion tool (RSLogix™ Project Migrator).

For technical specifications of the recommended CompactLogix 5380 controller, see CompactLogix Controllers Specifications Technical Data, publication [5069-TD002](#).

Replace an SLC 500 I/O Module

This chapter provides information about the recommended replacement for your existing SLC 500 I/O module.

The lifecycle status for Rockwell Automation products is maintained and published in the Rockwell Automation Product Lifecycle Status website: <https://www.rockwellautomation.com/en-us/support/product/product-compatibility-migration/product-lifecycle-status.html>.

Upgrade an SLC I/O Installation by Replacing it with Compact I/O

[Table 3](#) lists the recommended replacement Compact I/O module to your existing SLC 500 I/O module.

Before upgrading, take note of the following:

- When replacing an SLC I/O with a Compact I/O, a CompactLogix 5370 controller must be used.
- There might be technical differences between the SLC I/O and Compact I/O. Verify the specifications to meet your application needs. For wiring diagrams and technical specifications of Compact I/O modules, see Compact I/O Modules Specifications Technical Data, publication [1769-TD006](#).

Upgrade an SLC I/O Installation by Replacing it with Compact 5000 I/O

[Table 4](#) lists the recommended replacement Compact 5000 I/O module to your existing SLC 500 I/O module.

Before upgrading, take note of the following:

- When replacing an SLC I/O with a Compact 5000 I/O, a CompactLogix 5380, CompactLogix 5480, or ControlLogix® 5580 controller must be used.
- There might be technical differences between the SLC I/O and Compact 5000 I/O. Verify the specifications to meet your application needs. For wiring diagrams and technical specifications of Compact 5000 I/O modules, see Compact 5000 I/O Modules Specifications Technical Data, publication [5069-TD001](#).

- (1) The product may be in Active Mature, End of Life, or Discontinued state. To view the most up-to-date product lifecycle status, search for the catalog number on the [Product Lifecycle Status](#) website.
- (2) The recommended replacements that are indicated in this table are for reference only. There may be slight differences in specifications between the existing 1746 SLC I/O module and recommended 5069 Compact 5000 I/O module. Consult your local sales team for further assistance.
- (3) 1746-IB32 modules can be replaced with two 5069-IB16 modules.
- (4) 1746-OBP16 modules can be replaced with two 5069-OB8 modules.
- (5) 5069-OW16 is a DC module.
- (6) The 5069-OW16 does not come with an internal snubber, an external surge suppressor is required. For more information on selecting and adding surge suppressors, see the Industrial Automation Wiring and Grounding Guidelines, publication [1770-4.1](#).

SLC I/O Installation Using a Conversion Kit

You can use a conversion system to connect the existing SLC I/O wiring to the Compact 5000 I/O modules without disturbing the field wiring connections, reducing labor time and eliminating downtime that could result from wiring mistakes during the migration. With a conversion system I/O can be swapped one rack at a time, giving you the option to run both new and old I/O networks simultaneously.

Replace an SLC 500 I/O with a Compact 5000 I/O

See the installations instructions and technical data of the associated catalogs for the detailed wiring instructions.

IMPORTANT The 5069-IA16 module inputs use a shared common. The inputs have a return through internal module circuitry to the SA(-) terminal on the SA power RTB. If you install modules in a Compact 5000 I/O system that use AC SA power and DC SA power, you must install them on separate SA power buses.

IMPORTANT If the modules in the 5069 rack require more than one type of SA bus, for example 24V DC and 240V AC, use a 5069-FPD (field potential distributor) to separate the bus and these modules.

1746-0A16 to 5069-0A16

IMPORTANT If the modules in the 5069 rack require more than one type of SA bus, for example 24V DC and 240V AC, use a 5069-FPD (field potential distributor) to separate the bus and these modules.

IMPORTANT The 5094-0B8 and 5094-0B16 modules Local Actuator (LA+ and LA-) connections are used to supply field-side power to the module. The module does not draw current from the SA power bus that is internal to the system.

For the 5049-0B8 module, output channels 0...3 use LA0 +/-, and output channels 4...7 use LA1 +/-.

IMPORTANT The 5069-OW4I module does not use SA power. That is, it does not draw current from the SA power bus. The module passes it through to the next Compact 5000 I/O module in the system.

IMPORTANT Channel Connections: The diagram shows devices that are connected to channels 0, 1, 2, and 3. You are not restricted to using only this channel.

You can connect devices to any channel or combination of channels as needed.

Note: 5069-IY4 modules only support differential input.

IMPORTANT • This example shows separate power supplies for each device.

We recommend that you use separate power supplies to help improve the noise immunity.

However, if you use separate power supplies, you must verify that the common mode voltage between any two power supplies does not exceed 10V DC.

• This module has only two shield terminals. Compact 5000 I/O module RTBs only support one wire per terminal.

If you connect more than two devices to the module, you can ground two devices at the shield terminals. You must ground the remaining devices somewhere else, such as, to the DIN rail via a terminal strip.

1746-NI8 to 5069-IF8

IMPORTANT Channel Connections: The diagram shows a device that is connected to channel 0. You are not restricted to using only this channel.

You can connect devices to any channel or combination of channels as needed.
