

Light Kit for Angel 43257

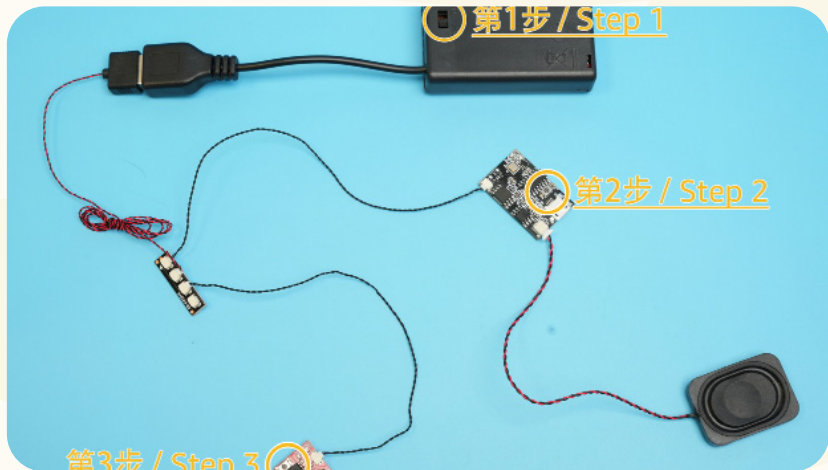

Thank You

For Purchasing this product. To give you the perfect hidden-line effect, we use severely thin aviation-grade wire with high tension and pressure tolerance. However, due to its thin nature, be careful not to cut through it as it might be susceptible to shearing during installation. Always be careful not to press brick pieces down on the wire.

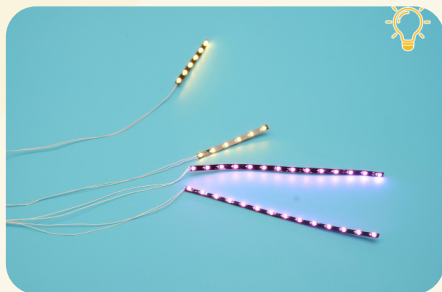

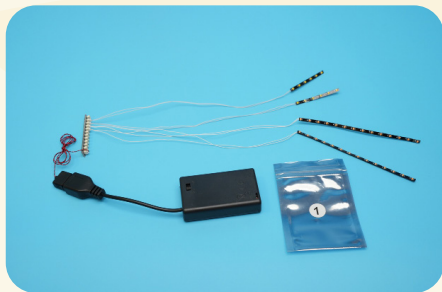

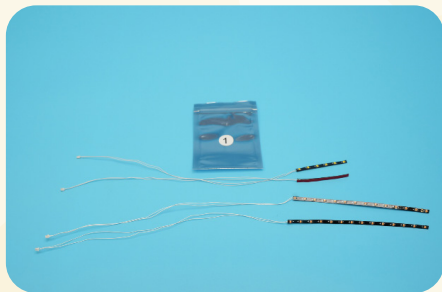

Let's Get Started

if you face any challenges, please feel free to reach out via **support@gameofbricks.eu** Please note that we offer 2 years of free light kit maintenance.

Sound Activation

SOUND GUIDE

(only if sound not works or cracky)

#1 fix

If the sound is crackling/hot working properly, please use **new batteries** or a **power bank**. It will solve your problem.

#2 fix

Sound directly depends on a remote...

01

Change power source (for example you can use a power bank)

03

Hold the power button for 3 seconds as soon you connect the remote board to power, just like in the video above. Those seconds are very important.

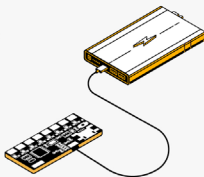

02

Disconnect every light from the remote board like in this video, please find it by visiting this page:

<https://youtu.be/blNqpDCLUw>

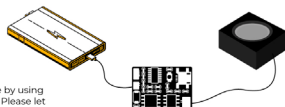

#3 fix

Please test the sound module by using our step-by-step video guide. Please let us know if you can still hear the sound.

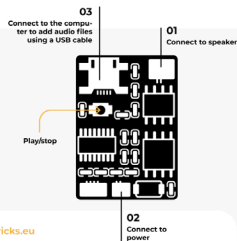

<https://youtu.be/xBkXoVD7xo>

#4 fix

Please check if sound files are in the sound module (sometimes our colleague forget to install them, we sincerely apologize for it).

You can do it by connecting the sound module using your USB cable (same as you connect your phone to a PC). There is also step by step video available for this part.

Please contact us at support@gameofbricks.eu with your results.

The main questions are:

- 01 Did you change the power source and the sound was still cracky/hot working?
- 02 Did remote work properly + video (if remote not working)
- 03 Did your sound work as shown on this video
- 04 Did it have sound files in your sound module?

Remote and Sound Guide

Remote and Sound guides with clickable
Youtube links are available on our website:
<https://gameofbricks.eu/pages/instructions>

Connect light kit to the battery box and installation will be complete. If you would like to use another power source, please make sure the maximum voltage is 6V.
