Bafang Go +
App Manual

LEKKER

01. Download the Bafang Go+ app

Open the installed Bafang Go+ app and carefully go through the introduction screens. Make sure to allow the Bafang Go+ app access to your location for navigation purposes, as well as activate your Bluetooth, whcih will be required later on to connect with your eBike.

Minimum requirements:
Android 8.0 or higher / iOS 9.0 or higher.

02. Homescreen

The homescreen contains the following information:

1. Battery status: Shows an estimate of the available battery percentage.

2. Range: Shows an estimate of the range you could travel with the remaining battery life.

3. ODO: Displays the total distance travelled by the connected eBike.

4. Riding modes

5. Bluetooth status: Shows the status of connectivity, wether or not an eBike is connected to your profile at the moment.

6. Lighting: Shows wether or not the safety lights of your bike are turned on or off.

7. Tab bar: Allows to quickly havigate between the homepage, navigation page, activities, and settings sections of the app.

03. Connecting your eBike

1. To connect your eBike, go to **Settings** and click on the eBike icon.
2. On the following screen, select the add vehicle option by clicking on the "+" icon at the top right. The screen seen on the right will appear.
3. Turn your eBike on, so that it becomes discoverable by your phone through Bluetooth.
4. Once the eBike is turned on, click the "Bluetooth binding" button and your eBike will appear as available to connect.
5. Select your eBike, allow it to be remembered by the app, and customise it's name and properties.

# 04. Navigation

Integrated navigation in the Bafang Go+ app is a new feature. At the navigation page, you can track the following:

1. Navigation: the interface shows you the route you should follow to arrive at a destination pre-defined by you
2. Duration of the trip in distance and time
3. Biking speed and riding mode
4. Heart rate monitoring
5. Remaining battery percentage
6. Safety lighting status

You can pause and change the trip at any time.

Make sure to drive safely and attentively and not type on your phone while biking.

FAQ's

Some questions that we have already received with proposed solutions as well as some general help:

Q. The app crashes or it doesn't open at all
- Check your phone's OS and confirm if the app is supported. Make sure it's up to date.
- Some Samsung phones have extra security features enabled by default that may prevent the app from working.

Q. My bike is not showing up when trying to connect via Bluetooth
- Ensure you are using your phone near the bike, less than 1m is ideal.
- Check the app's permissions (Bluetooth and location)
