

# Installation Instructions for Front Fog Lights (Raptor Version)

5. Remove the wheel arch of the original vehicle.

6. Remove the clips that secure the mudguard.

7. Thread the wiring harness through the hood.

8. Pull the wiring harness out from the position where the clip was just removed.

1. Remove the screws from the iron bar on the original vehicle.

2. Insert the fog light directly from the outside into the installation position.

3. Restore the original vehicle screws together with the fog lights, and install the fog light using the same method.

4. There are two adjustable knobs behind the fog light.

9. The wiring harness has 4 connectors, with 2 on each side connecting to the foglights.

11. Connect to the original vehicle power supply, with the black wire connecting to the negative pole of the vehicle.

10. After connecting both sides, secure the wiring harness to the vehicle body and reinstall the mudguard clip and wheel arch.

12. Connect the yellow wire to any wiring harness of the original vehicle's six-way switch, and all wiring harnesses are compatible.
