

Jabra Arrow

How many Bluetooth devices can I pair with my Jabra device?

In general, pairing with additional devices is performed the same way as the initial pairing you made for your product.

For Jabra devices that support simultaneous pairing with multiple devices, also known as Multiuse, the pairing scheme works in the following way:

- **8** - number of paired devices that your Jabra device will remember. If you attempt to pair a 9th device, it will replace the device that was first paired of the existing paired devices.
- **2** - number of paired devices that your headset can connect to simultaneously. For example, you can connect your headset to two mobile devices at the same time.
- **1** - number of paired devices that can play audio at the same time.
