Declaration

This document contains Honeywell proprietary information. Information contained herein is to be used solely for the purpose submitted, and no part of this document or its contents shall be reproduced, published, or disclosed to a third party without the express permission of Honeywell International Inc.

While this information is presented in good faith and believed to be accurate, Honeywell disclaims the implied warranties of merchantability and fitness for a purpose and makes no express warranties except as may be stated in its written agreement with and for its customer.

In no event is Honeywell liable to anyone for any direct, special, or consequential damages. The information and specifications in this document are subject to change without notice.

Waste Electrical and Electronic Equipment (WEEE)

WEEE: Waste Electrical and Electronic Equipment Directive	
	• At the end of the product life, dispose of the packaging and product in an appropriate recycling center. • Do not dispose of the device with the usual domestic refuse. • Do not burn the device.

FCC Part 15 compliant

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions:

(1) This device may not cause harmful interference, and

(2) This device must accept any interference received, including interference that may cause undesired operation.

Regulation (EC) No 1907/2006

According to Article 33 of Reach Regulation, be informed that the substances listed below may be contained in these products above the threshold level of 0.1% by weight of the listed article.

Product/Part Code	Substance Name	CAS Number
Only TC300 thermostats main board PCBA	Lead	7439-92-1
	Lead oxide	1317-36-8

Important Safety Information and Installation Precautions

Read all instructions.

Failure to follow all instructions may result in equipment damage or a hazardous condition. Read all instructions carefully before installing equipment.

When performing any work (installation, mounting, start-up), all manufacturer instructions and in particular the TC300 thermostats Mounting Instructions (31-00642) are to be observed.

- TC300 thermostats may be installed and mounted only by authorized and trained personnel.
- It is recommended that devices be kept at room temperature for at least 24 hours before applying power. This is to allow any condensation resulting from low shipping/storage temperatures to evaporate.
- Do not open TC300 thermostats, as they contains no user-serviceable parts inside!
- Investigated according to United States Standard UL60730-1 and UL60730-2-9.
- Investigated according to Canadian National Standard(s) C22.2, No. 205-M1983 (CNL-listed).
- CE declarations according to LVD Directive 2014/35/EU and EMC Directive 2014/30/EU.
- Product standards are EN 60730-1 and EN 60730-2-9.
- TC300 thermostats are Class B digital apparatus and complies with Canadian ICES-003.

Local codes and practices

Always install equipment in accordance with the National Electric Code and in a manner acceptable to the local authority that have jurisdiction.

Electrostatic sensitivity

This product and its components may be susceptible to electrostatic discharge (ESD). Use appropriate ESD grounding techniques while handling the product. When possible, always handle the product by its non-electrical components.

High voltage safety test

Experienced electricians, at first contact, always assume that hazardous voltages may exist in any wiring system. A safety check using a known, reliable voltage measurement or detection device should be made immediately before starting work and when work resumes.

Lightning and high-voltage danger

Most electrical injuries involving low-voltage wiring result from sudden, unexpected high voltages on normally low voltage wiring. Low voltage wiring can carry hazardous high voltages under unsafe conditions. Never install or connect wiring or equipment during electrical storms. Improperly protected wiring can carry a fatal lightning surge for many miles. All outdoor wiring must be equipped with properly grounded and listed signal circuit protectors, which must be installed in compliance with local, applicable codes. Never install wiring or equipment while standing in water.

Wiring and equipment separations

All wiring and controllers must be installed to minimize the possibility of accidental contact with other potentially hazardous and disruptive power and lighting wiring. Never place 24 VAC or communications wiring near other bare power wires, lightning rods, antennas, transformers, or steam or hot water pipes. Never place wire in any conduit, box, channel, duct, or other enclosure containing power or lighting circuits of any type. Always provide adequate separation of communications wiring and other electrical wiring according to code. Keep wiring and controllers at least six feet from large inductive loads (power distribution panels, lighting ballasts, motors, etc.). Failure to follow these guidelines can introduce electrical interference and cause the system to operate erratically.

Warning

By using this Honeywell literature, you agree that Honeywell will have no liability for any damages arising out of your use, or modification to, the literature. You will defend and indemnify Honeywell, its affiliates and subsidiaries, from and against any liability, cost, or damages, including attorneys' fees, arising out of, or resulting from, any modification to the literature by you.

The material in this document is for information purposes only. The content and the product it describe are subject to change without notice. Honeywell makes no representations or warranties with respect to this document. In no event shall Honeywell be liable for technical or editorial omissions or mistakes in this document, nor shall it be liable for any damages, direct or incidental, arising out of or related to the use of this document. No part of this document may be reproduced in any form or by any means without prior written permission from Honeywell.

Safety Information as per EN60730-1

TC300 thermostats are intended for commercial and residential environments.

TC300 thermostats are independently mounted electronic control system with fixed wiring.

TC300 thermostats are used for the purpose of building HVAC control and is suitable for use only in non-safety controls for installation on or in appliances.

Configuring Modbus connection

Scope of the document

The Modbus Integration document contains information related to Modbus Objects and the properties of the thermostat that help engineers to integrate and configure the settings via a Modbus tool.

Reference documents

- TC300 Commercial Thermostats User Guide (31-00644)

NC	Network Configuration

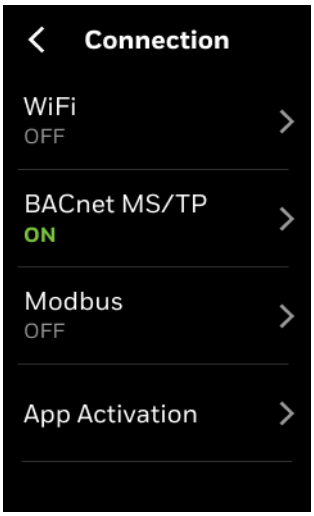
Configuring Modbus connection

The Modbus network can be configured while setting up the thermostat. Refer to the TC300 commercial thermostats user guide - 31-00644 or follow the steps below.

To connect thermostat via Modbus

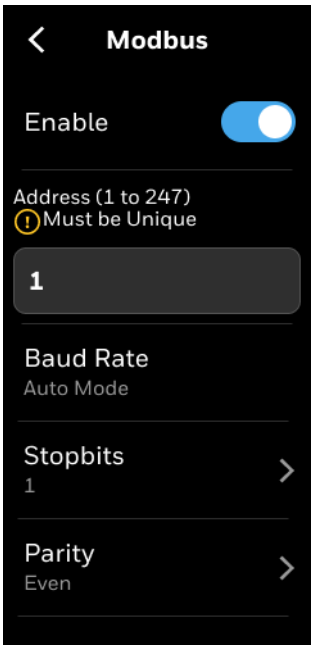
1. Swipe left from the Home screen.
2. On the Quick access screen of the thermostat, tap > **Connection**.
   The Connection screen appears.

Fig 1. Thermostat connection



3. Tap Modbus and enable it.
   The Modbus setting screen appears.

Fig 2. Modbus setting screen



4. Enter a unique address for the thermostat. It should be different from other TC300 thermostats.
5. Set the Baud Rate, Stopbits, and Parity from the list.
6. Tap the back arrow button to navigate back to the connection screen.

Baud rate

Modbus supports automatic baud rate and manual baud rate configuration, It can support the following Baud rate: 1200, 2400, 4800, 9600, 14400, 19200, 38400, 57600, and 115200.

Auto Baud rate

The default for the first startup is Auto Baud rate. This detection process will last 5 minutes after TC300 thermostats start to detect there is data communication from Modbus master. If there is no right baud rate matched during this 5 minutes, TC300 thermostats will work as the last-detected baud rate, or default to 19200 bps.

Manual Baud rate

After the default Auto Baud rate matches, TC300 thermostats will enter manual baud mode, then can configure the desired Baud rate.

Modbus Serial port settings

- **Data Bits**: 8
- **Stop Bits**: 1

- **Parity**: None/Even/odd (Default: Even)

Notes:

— Both Modbus word order and Byte order are big-endian.

— The value of float type data stored in Modbus is an integer value of the real value enlarged by 1/scale, so it is equal to the true value divided by the value of the scale.

***Note: Supported only in TC3XXB models**					
Register Count=1 Access = Read Memory Type = Volatile					
Reg Address	**Name**	**Register Type**	**Range**	**Scaling**	**Description**
6004	Cooling Valve (ON/Off)	Discrete Input	Off = **0** On = **1**	1	Cooling on/off valve output status
6005	Heating Valve (ON/Off)	Discrete Input	Off = **0** On = **1**	1	Heating on/off valve output status
6006*	Cooling Floating Open	Discrete Input	Off = **0** On = **1**	1	Cooling floating valve open control output.
6007*	Cooling Floating Close	Discrete Input	Off = **0** On = **1**	1	Cooling floating valve close control output.
6008*	heating Floating Open	Discrete Input	Off = **0** On = **1**	1	Heating floating valve open control output.
6009*	Heating Floating Close	Discrete Input	Off = **0** On = **1**	1	Heating floating valve close control output.
6010	High Speed Fan	Discrete Input	Off = **0** On = **1**	1	High speed fan on/off status
6011	Low Speed Fan	Discrete Input	Off = **0** On = **1**	1	Low speed fan on/off status
6012	Medium Speed Fan	Discrete Input	Off = **0** On = **1**	1	Medium speed fan on/off status
6014	Modulating Cooling Stage1	Discrete Input	Off = **0** On = **1**	1	Modulating cool stage1 on/off status
6015	Modulating Heating Stage1	Discrete Input	Off = **0** On = **1**	1	Modulating heat stage1 on/off status
6016*	WaterFlowValve	Discrete Input	Off = **0** On = **1**	1	Water flow valve control output.
6017*	ReversingValve	Discrete Input	Off = **0** On = **1**	1	Revering valve control output.
6609*	Humidifier	Discrete Input	Off = **0** On = **1**	1	Humidifier control output.
6070*	Conventional Cool Stage 2	Discrete Input	Off = **0** On = **1**	1	Convention cool stage2 on/off status
6071*	Conventional Heat Stage 2	Discrete Input	Off = **0** On = **1**	1	Convention heat stage2 on/off status

Alerts objects

Table 4 Alert objects

***Note: Supported only in TC3XXB models**					
Register Count = 1 Memory Type = Volatile Scaling = 1					
Reg Address	**Name**	**Register Type**	**Access**	**Range**	**Description**
7002	Proof of Air Flow Alarm	Discrete Input	Read	Inactive = **0** Active = **1**	Supply fan status mismatch alarm & priority
7049	Space Freeze Protection Alarm	Discrete Input	Read	Inactive = **0** Active = **1**	If the space temperature has dropped below 43°F and after 120 seconds of delay, the high priority alarm is created.
7057*	Proof of Water Flow Alarm	Discrete Input	Read	Inactive = **0** Active = **1**	Proof of water flow alarm & priority.
7050	Unknown Time Alarm	Discrete Input	Read	Inactive = **0** Active = **1**	Time lost alarm
81	Temp Sensor Faulty Alarm	Discrete Input	Read	**BIT0** = Inactive **BIT1** = High **BIT2** = MEDIUMN_ONBOARD **BIT3** = MEDIUMN_REMOTE **BIT4** = MEDIUMN_SYLK	**High Priority**: 1. Only local sensor configured & even if any one of the on-board temperature sensor is in alarm. 2. Onboard and remote temperature sensors are reporting null values. 3. Configured as multi sensor & both the remote sensor & on-board configured sensor has failed. **Medium priority**: 1. Configured to use multiple sensors & only the on-board sensor has failed. but getting reliable value from the Sylk sensors. 2. Configured for multiple temperature sensors (onboard and external). Either the onboard or Sylk sensor(s) has failed with values available from sensors. When at least one temperature sensor value is available then this will remain medium priority alarm.

Table 4 Alert objects (Continued)

***Note: Supported only in TC3XXB models**					
Register Count = 1 Memory Type = Volatile Scaling = 1					
Reg Address	**Name**	**Register Type**	**Access**	**Range**	**Description**
82	Humidity Sensor Faulty Alarm	Input	Read	**BIT0** = Inactive **BIT1** = High **BIT2** = MEDIUMN_ONBOARD **BIT4** = MEDIUMN_SYLK	**High Priority**: 1. Only local sensor configured & on-board humidity sensor is in alarm. 2. Remote Sylk bus sensor addr 2 is giving null value and digital output is configured for Humidification and Dehumidification. 3. Onboard and remote temperature sensors are reporting null values. **Medium priority**: 1. Configured to use multiple sensors & only the on-board sensor has failed, but getting reliable value from the Sylk sensors. 2. Configured for multiple humidity sensors (onboard and external). Either the onboard or Sylk sensor(s) has failed with values available from sensors. When at least one humidity sensor value is available then this will remain medium priority alarm.
83	Sylk Device Comm. Failure Alarm	Input	Read	Normal = **1** SylkAddr2Fail = **2** SylkAddr3Fail = **3** SylkAddr4Fail = **4** SylkAddr5Fail = **5** SylkAddr10Fail = **10** ManySylkFail = **16**	Sylk communication failure alarm. If more than 1 Sylk sensor has failed then 'ManySylkFail' alarm would be generated & installer has to check the BACnet points related to all Sylk sensor to understand which sensor has failed.
84	Space Temp Out of Range Alarm	Input	Read	**BIT0** = Inactive **BIT1** = High **BIT2** = MEDIUMN_ONBOARD **BIT3** = MEDIUMN_REMOTE **BIT4** = MEDIUMN_SYLK **BIT5** = MEDIUMN_NETWORKINPUT OUTOFRANGE	**High priority**: All space temperature are out of range. No other resource can be used. **Medium priority**: Some of space temperatures are out of range, other resource can be used for controlling.
29	Discharge Air Temp Sensor Faulty Alarm	Input	Read	Inactive = **1** Medium = **2** High = **3**	**High priority**: Discharge air sensor failure. **Medium priority**: Discharge air sensor out of range.

Table 4 Alert objects (Continued)

***Note: Supported only in TC3XXB models**

Reg Address	**Name**	**Register Type**	**Range**	**Scaling**	**Description**
5039	Auxiliary Heat Enable	Coil	Off = **0** On = **1** (Default 0)	1	Auxiliary heat enable
2903	Auxiliary Heat Mode	Holding	Peripheral = **1** Supplemental = **2** (Default 1)	1	Auxiliary heat type
3718	Auxiliary Heat Peripheral Droop	Holding	0 to 10 **Δ**°F (0 to 5 **Δ**°C) (Default 0 **Δ**°F/ 0**Δ**°C)	0.01°F	Peripheral aux heat droop
3719	Auxiliary Heat Supplemental Droop	Holding	0 to 10 **Δ**°F (0 to 5 **Δ**°C) (Default 2 **Δ**°F/1 **Δ**°C)	0.01°F	Supplemental aux heat droop
5001	Aux Heat Fan On/ OFF	Coil	Off = **0** On = **1** (Default 1)	1	Fan run On/Off when aux heat on
3050	Auxiliary Heat OAT Lockout	Holding	30 to 120 °F (-2 to 48 °C) (Default 65°F/18.3°C)	0.01	Outdoor air temperature auxiliary heat lockout
3215	Upstage Timer	Holding	30 to 960 minutes (Default 30 minutes)	1	Up stage timer value
5055	Upstage TimerEnbale	Coil	Off = **0** On = **1** (Default 0)	1	Up stage timer enable
3053	Auxiliary Heat Ramp Factor	Holding	0 to 100 (Default 2)	0.01	Auxiliary heat recovery ramp factor
4465*	EnableCompressorOATLockout	Coil	Disable = **0** Enable = **1**(default 1)	1	Enable compressor outdoor air temperature lockout.
4466*	EnableAuxiliaryHeatOATLocuout	Coil	Disable = **0** Enable = **1**(default 1)	1	Enable auxiliary heat outdoor air temperature lockout

Compressor

Table 9 Compressor

*Note: Supported only in TC3XXB models					
Register Count = 1 Memory Type = Non Volatile Access = Read/Write					
Reg Address	**Name**	**Register Type**	**Range**	**Scaling**	**Description**
2954*	Compressor Delay	Holding	15 to 120 seconds (Default 90 seconds)	1	Compressor delay time value.
3051*	Compressor OAT Lockout	Holding	0 to 70 °F (-17 to 21 °C) (Default 30 °F/-1.1 °C)	0.01	Outdoor air temperature compressor lockout.

Cooling and Heating advanced settings

Table 10 Cooling and Heating advanced settings

*Note: Supported only in TC3XXB models					
Register Type = Holding Register Count = 1 Access = Read/Write Memory Type = Non Volatile					
Reg Address	**Name**	**Range**	**Default**	**Scaling**	**Description**
3041	Cooling Throttling Range	0 to 30 Δ°F (0 to 16 Δ°C)	4 Δ°F (2.2 Δ°C)	0.01°F	Cooling throttling range
3042	Cooling Integral Time	0 to 5000 seconds	2500 seconds	1 second	Cooling integral time 0 = Disable (i.e. proportional only)
3044*	Cooling System Response	2 to 20 cycles per hour	3 cycles per hour	1	Cooling system response.
3045*	Cooling Min On Time	0 to 300 seconds	120 seconds	1 second	Cooling stage minimum on time.
3082*	Cooling Min Off Time	0 to 300 seconds	60 seconds	1 second	Cooling stage minimum off time.
3046*	OAT Cooling Lockout	-40 to 120 °F (-40 to 48 °C)	35 °F (1.7 °C)	0.01°F	Outdoor air temperature cool lockout.
3047	DAT Cooling Low Limit	-40 to 60°F (-40 to 15 °C)	45 °F (7.2 °C)	0.01°F	Discharge air temperature low limit setpoint.
3054	Heating Throttling Range	0 to 30 Δ°F (0 to 16 Δ°C)	4 Δ°F (2.2 Δ°C)	0.01°F	Heating throttling range
3055	Heating Integral Time	0 to 5000 seconds	2500 seconds	1 second	Heating integral time 0 = Disable (i.e. proportional only)
3057	Heating System Response	2 to 20 cycles per hour	6 cycles per hour	1	Heating system response.

Table 10 Cooling and Heating advanced settings (Continued)

***Note: Supported only in TC3XXB models**					
Register Type = Holding	**Register Count = 1**	**Access = Read/Write**	**Memory Type = Non Volatile**		
Reg Address	**Name**	**Range**	**Default**	**Scaling**	**Description**
3058*	Heating Min On Time	0 to 300 seconds	120 seconds	1 second	Heating stage minimum on time.
3059*	Heating Min Off Time	0 to 300 seconds	60 seconds	1 second	Heating stage minimum off time.
3060*	OAT Heating Lockout	40 to 120 °F (-40 to 48 °C)	70 °F (21.2 °C)	0.01	Outdoor air temperature heat lockout.
3061	DAT Heating High Limit	60 to 200°F (16 to 93 °C)	150 °F (65.5 °C)	0.01°F	Discharge air temperature high limit setpoint.
3745*	Heat_FuelType	Gas/Oil = **1** Electric = **2**	Gas/Oil = **1**	1	Fuel type selection. Based on the fuel type the default CPH will vary.
3101	Thermostat Deadband	2 to 9 Δ°F (2 to 5 Δ°C)	3 Δ°F (1.7 Δ°C)	0.01°F	Temperature differential between heat and cool setpoint
3014	Initial delay to start control after power cycle	0 to 300 seconds	10 seconds	1 second	Initial delay to start control after power cycle
3018	Cooling recovery max setpoint ramp	0 to 20 Δ°F/hr (0 to 11 Δ°C/hr)	6 Δ°F/hr (3.3 Δ°C/hr)	0.01°F/hr	Maximum cooling setpoint ramp
3016	Cooling recovery min setpoint ramp	0 to 20 Δ°F/hr (0 to 11 Δ°C/hr)	2 Δ°F/hr (1.1 Δ°C/hr)	0.01°F/hr	Minimum cooling setpoint ramp.
3017	OAT at the maximum cool setpoint ramp	-40 to 120 °F (-40 to 48 °C)	70 °F (21.1 °C)	0.01	Outdoor air temperature at the maximum cool setpoint ramp
3015	OAT at the minimum cool setpoint ramp	-40 to 120 °F (-40 to 48 °C)	90 °F (32.2 °C)	0.01	Outdoor air temperature at the minimum cool setpoint ramp
3022	Heating recovery max setpoint ramp	0 to 36 Δ°F/hr (0 to 20 Δ°C/hr)	8 Δ°F/hr (4.4 Δ°C/hr)	0.01 °F/hr	Maximum cooling setpoint ramp
3020	Heating recovery min setpoint ramp	0 to 36 Δ°F/hr (0 to 20 Δ°C/hr)	2 Δ°F/hr (1.1 Δ°C/hr)	0.01 °F/hr	Minimum heating setpoint ramp
3021	OAT at the maximum heat setpoint ramp	-40 to 120 °F (-40 to 48 °C)	60 °F (15.5 °C)	0.01	Outdoor air temperature at the maximum heat setpoint ramp
3019	OAT at the minimum heat setpoint ramp	-40 to 120°F (-40 to 48 °C)	0°F (-17.8 Δ°C)	0.01	Outdoor air temperature at the minimum heat setpoint ramp
