Dillon's RF 100 Automatic Primer Filler

***Eliminates the need
for primer pick-up tubes!***

***Fills the primer tube
while you reload!***

***Clear polycarbonate shield
and protective housing***

Dillon's RF 100 Automatic Primer Filler eliminates the task of filling primer pick up tubes. Now you simply pour your primers from their box into the top, press the blue button and watch it run!

In about two minutes the primers are inside the protective metal housing. That's about 30 rounds you can load while the RF 100 is doing your work for you!

The RF 100 is available for either large or small primers, and conversion kits are available at one low price of \$47.95 each.

We READ Our Mail!

Dear Mr. Dillon, I have read your "story" on the **about** us tab several times. I have often wanted to comment on your philosophy. Given the current view of business by the present set of politicians, I find it refreshing to see that someone really knows how to build a business. Many businesses could benefit from your model and approach. This country needs more Dillon Precisions and people like you.

I own one of your products and that alone will make me a lifelong customer. But it is your attitude and the way you run your company that has me so impressed. I am sure your employees are as loyal as your customers. I can tell you I prefer to call in my orders, even though it would be easier to do it online, just so I can talk to them and wish them a good day.

I was brand new to reloading and your product was recommended by one of the people at my club. He is well respected and I knew a recommendation from him was as good as gold. I purchased an XL650 and I can tell you my expectations were exceeded and I suspect they always will be.

Reloading takes careful attention to detail and I take it very seriously, however I feel an extra measure of confidence knowing I have an excellent machine to work with.

I wish you and your company much success and I hope you are in business long after I am too old to pull the handle on my 650.

John Geraci - gerjohn@optonline.net

Thanks for the heads up concerning .45 ACP cases being manufactured with both large and small primer pockets. After checking my supply I found I had some of both. Not a real problem, just an extra step or two during reloading. I have two buckets on my bench, one labeled large, the other small. After depriming/resizing they go into their respective buckets. Then on to cleaning and final inspection before repriming.

Dave Howard - kimbers5@live.com

I have been using Dillon products for years, but I have one problem: I asked my wife to wash the dust cover for my RL550B. The only thing is, when it came out it fell apart. So, you might suggest that others wash theirs by hand! Thanks For All The Great Products.

Al Humble - Clayton, Ohio

THE **RUGER**[®] LC380[™]

5

The **Ruger**[®] **LC380**[™] is the perfect pairing of the award-winning LC9[™] pistol and the popular .380 Auto cartridge. It features a dovetailed, high visibility 3-dot sight system, 7-round magazine and finger grip extension floorplate, manual safety, loaded chamber indicator and light recoil spring for an easy-to-manipulate slide. The LC380[™] is the same size as the LC9[™], yet offers reduced recoil making it Ruger's lightest recoiling personal protection pistol yet.

Finger Grip Extension Floorplate Can Be Added to the Magazine for Comfort and Grip, Included FREE

Same Size as the LC9[™] but with a Lighter Recoil Spring for Easier Slide Manipulation

DÉJÀ VU, ALL OVER AGAIN THE GSG StG-44

Reviewed by Peter Caroline

Some years prior to the Gun Control Act of 1968 nonsense, I was stationed at Ft. Belvoir, Virginia, and was working in my spare time at Hunter's Lodge in Alexandria. Hunter's Lodge was the retail outlet for Interarmco, an armaments import/export firm that did a lot of mail-order business and also, purportedly, shipped arms to entities friendly to our nation's interests.

Hunter's Lodge was on the second floor of a building whose parking lot featured a number of impressive artillery pieces, all legal to buy. The retail store featured endless racks and display cases filled with surplus and confiscated handguns and long guns from all over the world. You could buy DEWAT ("deactivated war trophy") full-auto and selective fire weapons for prices that would make today's collectors weep. Sten guns were \$14.95. WW I French Chauchats were \$19.95 (at least \$20 overpriced). M1928 Thompsons were \$79.95. The gun that I really wanted, however, was the SturmGewehr-44, StG-44 for short, also priced at \$79.95. My Army pay was \$72 per month, so I never did get enough money put together to buy it. That's really unfortunate, because today, one of those guns would cost as much as a subcompact car.

The StG-44 was the original assault rifle, the inspiration for the AK-47, and the great-uncle of today's Modern Sporting Rifles. It was selective-fire, made of heavy stamped metal and was cham-

bered for a shortened 7.92mm Mauser cartridge, pre-dating the SKS and AK 7.62x39mm round. Most of the StG-44 production ended up on the Eastern Front and never made the trip home.

At the 2012 SHOT Show, I happened to wander by the American Tactical Imports booth, and I spotted what I thought was an original StG-44 in a wooden case. It turned out to be a new iteration of the old classic, in .22 Long Rifle, made in Germany by GSG (German Sport Guns). It had a 25-round magazine, was semiauto-only (aw, shucks!) and weighed about a pound less than the 11-lb. original...pretty hefty for a .22! It was so close in detail to the original, I had to have one, if only for review. (No, actually I just WANTED it!)

Much later in the year, my "review" sample finally arrived. FedEx delivered a very large box, inside of which was a smaller large box, inside of which was a hinged pine box with rope handles on either end, and a large WaffenAmt eagle burned into the top, with the legend "American Tactical STG 44." There was also an oval metal plate on the side of the box, with the gun's serial number, and a declaration that this was an "Amish Hand-Crafted Case - Mt. Morris, NY." As an old ad guy, I know that great packaging is great marketing, and this is a perfect example.

There are lots of nice, authentic details on this gun. The buttstock assembly takes down like the original. There is a small storage compartment under a spring-loaded trapdoor at the top rear of

the butt. The rear sight is a Mauser-like arrangement, but with adjustable windage as well as elevation. The cocking lever, located on the left side, can be locked open, and when the bolt is allowed to slam forward, the spring-loaded dust cover pops open. Slick! A lot of the carefully recreated detail is non-functional, as this is a recoil-operated .22 rimfire, not a gas-operated 7.92 centerfire.

At the range, the StG-44 is a traffic-stopper, even without the case. Like the original, it is an impressive piece of work. The 25-round magazine has a thumbpiece that makes loading easy, and numbers on the side of the magazine tell you exactly how many rounds you have loaded. When the magazine is empty, a little pin pops up and activates a mechanism that holds the bolt open. The gun prefers high-velocity, 40-grain .22 ammo; I found CCI Blazer to be the most accurate. As with every .22 LR firearm, individual results vary. Despite the authentic, WW II-vintage sights, which

are less than friendly to aging eyes, I managed to get 10-round groups of about 2" at 25 yards from the bench. This is surprising good for a gun that makes no pretensions to being a target rifle, but I'd sure love to figure out some way to fit a red dot sight on this puppy!

The GSG StG-44 comes with a very thorough and readable instruction manual, the obligatory cable lock, a chamber brush, a loaded chamber indicator, a tube of MPR-7 lubricant and an impressive GSG trademark bumper sticker. MSRP is \$599. This is not your same-old, common-place, inconspicuous .22 semiauto. It is a serious shooting instrument, purpose-built for decimating attacking hordes of ground squirrels and golf balls. Try it, you'll like it!

WANT TO RELOAD? SAVE YOUR BRASS!

Pick up your brass the easy way!
This takes the hard work out of
polishing up your brass. No more
aching back from bending over or
kneeling at the range!

K19-21894 \$44.95

THE SHELLSORTER

...is a simple product designed to reduce the time you spend sorting brass, allowing you to enjoy more time reloading and shooting.

The **SHELLSORTER** is comprised of three pans designed to sort several common calibers. The fastest way to sort is to stack all three of the pans together on a common five-gallon bucket, yellow pan on top and black on the bottom; in that way, with a few shakes all your brass is sorted by caliber at the same time.

The **SHELLSORTER** is made of ABS, a strong plastic which will give a lifetime of service.

K19-19972 \$39.95

FROGLUBE CLP

FrogLube is a bio-based cleaner, lubricant and preservative (CLP) product. FrogLube Solvents are designed to quickly attack surface fouling, baked-on or filmed residues and other metallic fouling such as lead and copper, while protecting firearms coatings, paints, wood and other materials from the corrosive effects of petroleum-based, flammable and toxic weapons care products. Frequent use will keep firearms running at optimal performance and not harm the FrogLube coating.

BL 550 Dillon's Basic Loader

\$259⁹⁵

K19-15399

Reloading Dies and Caliber Conversions sold separately (see the back of the order blank in the center of *The Blue Press*).

Pictured with optional accessories:
Strong Mount K19-22051 \$47.95

Dillon's RL 550B has long worn the title of "The World's Most Versatile Progressive Reloader," and stripping it down to its most basic form – Dillon's BL (Basic Loader) 550 – adds a whole new dimension of versatility for the shooter/hunter who needs to feed several rifles.

The BL 550 is essentially an RL 550B without the automatic priming and powder systems. Capable of loading over 160 calibers – just like the RL 550B – it uses any manufacturer's standard 7/8" x 14 reloading dies. It's priced comparably with other manufacturers' turret presses; yet unlike them, it's fully upgradeable to Dillon's Progressive RL 550B loader!

The interchangeable toolhead (Page 15) makes it quick, easy and inexpensive to change calibers. For example, if you load .30-06 for elk, .243 for deer and .22-250 for coyotes, you don't even have to change the shellplate. You simply pull two pins and swap the toolhead with your .30-06 dies to another toolhead with your .22-250 or .243 dies in less than 30 seconds! The additional toolheads are \$22.95 each, or \$20.95 each if you buy three or more – if you load for several rifles it's a no-brainer! Once you get your dies adjusted, you'll never have to re-set them.

A powder measure adapter (bottom right photo) is available if you want to use a manual measure that you already own. Or, if you want to weigh every powder charge you load, it's easy – you can use a powder trickler with the powder die/funnel assembly that comes with the BL 550.

RL 550B ACCESSORIES

A. RL 550B CALIBER CONVERSION KITS

Contains: Shellplate, powder funnel and locator buttons. Available in all calibers; please specify caliber desired.

K19-RL550B CON-

VERSION \$45.95 (Exotic calibers, \$55.95)

B. AUTO POWDER MEASURE SYSTEMS

Additional powder measures stay on the toolhead. Never change powder measurements again!

RL 550 Powder Measure **K19-20782, \$76.95 ea.**
Magnum Rifle Powder Bar **K19-21353, \$29.95 each**
X-Small Powder Bar **K19-20780, \$29.95 each**

C. DELUXE QUICK CHANGE ASSEMBLY

With a quick change assembly and a caliber conversion kit (SOLD SEPARATELY), you can convert in less than a minute. Complete with:

- Toolhead
- Powder Measure
- Powder Die
- Toolhead Stand

Price without Dies, **K19-22058, \$103.95**

Loading dies sold separately on Pages 34, 35 & 52.

D. POWDER DIES

Extra powder dies allow you to move your powder measure from toolhead to toolhead without changing the "bellling" adjustment.

K19-20064, \$11.35 each
Three or more, \$10.25 ea.

X-Large Powder Die, **K19-21253, \$19.95 each**

E. TOOLHEADS

Don't adjust dies when switching calibers. These precision tool holders hold your dies in perfect alignment, making caliber changes quick and easy.

F.

K19-13909, \$22.95 each
Three or more, \$20.95 ea.

F. TOOLHEAD STANDS

The ultimate in convenience for keeping your reloading bench clean and uncluttered.

K19-22055, \$20.95 each
Three or more, \$18.95 ea.

G.

G. 1" BENCH WRENCH

K19-10842, \$7.95 each
Two or more, \$7.10 ea.

H. RL 550B CASEFEEDER UPGRADE

Available for most pistol cartridges – will not work with rifle cartridges.

Dillon's Rapid Trim 1200B Case Trimmer

Makes short work out of trimming large quantities of rifle brass

Dillon's RT 1200B shown installed on an AT 500.

The RT 1200B is used just like a standard size die. The big difference is that while you are pushing the case into the die to size it, a 1/4 horsepower electric motor driving a carbide cutter is trimming the case to length. Chips are drawn off through a vacuum manifold that clamps to the outside of the special size/trim die. (*Vacuum cleaner and hose not included.*) The RT 1200B is equipped with a quick-

disconnect power cord; and it can be used on any standard reloader, single stage or progressive.

The RT 1200B trimmer motor **K19-22080** is **\$254.95**. (Available only in 110 volt 60 hz.) Size/trim dies are sold separately. (Please see chart below). Replacement carbide cutting blades, **K19-13141**, are **\$19.95** each. Upper lock rings, **K19-13559**, are **\$4.99** each.

MILITARY BRASS?

Eliminate the "Grunt Work" with Dillon's Super Swage 600

Until now, reusing military brass, with its crimped primer pockets, has been a tedious task. The Dillon solution is a remarkably simple device that bolts to your bench and allows you to swage the primer pockets with speed and ease. The case is supported from the inside, so you won't be tearing the rims off the brass. A tool steel, hardened swage rod (easy to change from large to small primers) simply rolls the crimp away. No reaming is necessary. Our unique compound cam leverage system assures not only ease of operation, but perfect alignment with each and every round. Sound simple? It is and it works. What's more, it's inexpensive. The Super Swage 600 comes complete with large and small swage rods.

Dillon's Case Preparation Equipment

CV-2001
K19-20493
\$187.95

CV-750 K19-19455 \$144.95

CV-2001 – The Industry Standard

Dillon's CV-2001 Vibratory Case Cleaner is the largest in the industry. Its 12-1/2 quart bowl capacity will allow you to polish up to 1,300 .38/.357 or 550 .30-06 cases per hour.

Not only is our capacity greater, but our motor is larger in horsepower, internally cooled, thermally protected, and turns on precision ball bearings. This is no "hobby" machine!

The bowl and base are constructed of 7/32" thick injection molded high-strength polypropylene which is impact and abrasion resistant.

Case/Media Separators

After we sold thousands of our famous first generation FL-2000 case cleaners, customers who had purchased them began asking us to address the problem of separating the cleaned and polished brass from the cleaning media.

We knew from the beginning that the simplest method of separating would be a rotating squirrel cage, but we had to find a design we could manufacture economically. Our problem was that it had to be BIG – big enough to handle the entire load of the FL-2000 series case cleaners.

The solution was an injection molded reversible part. Simple, and it works great.

Our device is large, 10" x 14", and will hold more than 1,600 .38 Special cases. It sits on a large media collection tub that measures 18" x 22". The tub keeps the mess off the floor and bench.

It's fast – so fast it will remove media from 1500 rounds of .223 brass in a matter of seconds.

Limited Work Space?

Dillon's introducing the new CV-750 heavy duty Vibratory Case Cleaner for those with limited space. This new case cleaner uses the same motor as the CV-2001 and is every bit as tough – just more compact. To accompany the CV-750, the CM-500 does the same job as the larger CM-2000 Case/Media Separator; and, like the CV-750, handles just about half the capacity of the larger unit.

CM-2000 Case/Media Separator K19-20675 \$72.95

CM-500 Case/Media Separator K19-21045 \$46.95

Although scaled down in size, these two pieces of equipment are every bit as tough as their full-sized counterparts. We used the same materials in their construction and designed them to work just as hard – and do it in a more compact area!

Attention European Customers:

Case Cleaners are available in 220 volt!

Euro CV-2001 K19-22047 \$212.95

Euro CV-750 K19-19473 \$169.95

All Dillon CV-2001 and CV-750 Vibratory Case Cleaners have a One-Year Warranty on the electric motor.

Rapid Polish 290

SHINE? You bet your brass! Dillon Precision has developed another exciting new product to make your reloading faster and easier. Rapid Polish 290 is the first cartridge case finish designed specifically to bring a brilliant shine (20 percent brighter than tumbling media alone) and a protective coating to reloaded

ammunition. Simply add several capfuls to the media in your tumbler and run. Rapid Polish 290 has a great residual value and stays in your tumbling media. You'll use less each time you clean your cases.

Rapid Polish 290 contains no ammonia, so it won't weaken brass cases!

Rapid Polish 290

8 oz. bottle.	K19-13804	\$8.95
Case (20 pc.)	K19-20255	135.95

Dillon Case Lube

Rapid Lube 5000, Dillon's aerosol cartridge case lubricant, has been replaced by an "environmentally correct," non-aerosol case lube. It works the same: Simply lay your cases out, spray lightly with one or two passes and you've done it. No mess, no guesswork. Within minutes the lubricant distributes itself around the cartridge

cases and you're ready to load. Try a bottle. You'll never use a grease pad again.

FRONTIER LOGISTICS:

By Marko Kloos

The economy is in a lurch, and it seems that the days of reasonably cheap ammunition are over for good. Centerfire rifle ammunition has almost doubled in price over the last ten years, and as shooters have increasingly scoured gun store shelves and Internet retailers for bargains, even the supplies of foreign surplus ammunition have largely dried up. Where people could once feed their AK-style rifles and SKS carbines with commercial 7.62x39mm ammo for four dollars per box, paying twice as much for corrosively primed WWII surplus ammunition seems like a really good deal these days.

When a fun afternoon at the rifle range requires a cash outlay that's the equivalent of a text-happy teenager's monthly cell phone bill, and the only alternatives are either taking out a second mortgage, or letting the rifle collection gather dust in the gun safe, one starts looking for other solutions to keep shooting long guns on a regular basis.

A time-tested solution to the problem of ammunition economy is the pistol-caliber rifle. Using the same size of lead ball for both rifle and pistol is an idea that dates back to the days of the flintlock, but in those days, people hardly ever owned and carried both at the same time. The concept really came into its own with the advent of the metallic cartridge, and the westward expansion of the United States in the 19th century.

For an explorer or adventurer striking out for the uncharted wilds, having a rifle and handgun in the same caliber made a lot of sense. It meant having to buy and store only one kind of ammunition, a valid consideration when all one's provisions and supplies had to fit on the back of a mule or in a Conestoga wagon. It also provided a level of redundancy in the event of a lost or broken gun. If the rifle broke, the ammo for it could be used in the handgun, and vice versa.

What made sense for a 19th century wilderness explorer also makes sense for a 21st century rural or suburban gun owner, albeit for different reasons. Sure, it's nice not to have to throw out a few boxes of cartridges when the home defense rifle breaks, but modern-day gun owners don't usually put a car-

bine into their minivans for the long and dangerous trek to the pizza buffet, and a competent gunsmith is usually closer than a three-week ride on horseback. Owning a pistol-caliber rifle does have its own set of modern advantages, however.

One major selling point for the rifle in a handgun caliber is the ability to use cheaper ammunition. While handgun ammo has seen as much of a price jump as rifle ammunition, it's still cheaper in absolute terms to shoot a 9mm Luger or .357 Magnum than a .30-30, .308 Winchester, or .223 Remington. When you own a rifle chambered in a caliber that's almost exclusively available with hunting bullets – try finding some FMJ surplus .30-30, for example – you'll pay easily eighty cents per round, whereas you send only twenty-five or thirty cents downrange every time you pull the trigger on a carbine loaded with 9mm Luger FMJ ammunition. Saving money on ammo means more practice per dollar spent, and for people on a slim budget, it can make the difference between getting some range time, or not being able to take the rifle along for range trips at all.

Another advantage of the pistol-caliber long gun is the increased availability of places to practice. Many indoor pistol ranges allow the use of long guns in handgun calibers, but very few have facilities for rifle shooters to stretch the legs of their .308 Winchester deer-getters or AR-15 home defense rifles. While most indoor ranges are limited to 25 yards at most, the pistol-caliber rifle is still useful for practice because you can compensate for the shorter range with proportionally smaller targets.

Lastly, pistol-caliber long guns have an intangible advantage over their higher-powered cousins: they are easier to shoot, and a lot of fun. This makes them especially suitable as long guns for the entire family, or for the gentle introduction of new shooters to centerfire rifles. While you wouldn't want to start a new shooter on a Marlin lever-action rifle in .30-30 or .45-70, there are few guns more fun to shoot than the same lever-action rifle in .357 Magnum, loaded with mild .38 Specials. Incidentally, the low recoil and limited power of most handgun-caliber rifles also makes them an

THE PISTOL-CALIBER RIFLE

outstanding choice for home defense. They generally have very low recoil and can be used proficiently by most people regardless of stature and strength, and they won't shoot through things as thoroughly as full-powered rifle, a consideration in urban environments. And because shooters can practice with their rifles at indoor ranges at precisely the distances likely in a home defense event, they'll be more likely to hit their targets.

Like most things in life, handgun-caliber rifles have disadvantages as well. They tend to be underpowered for their weight and length, their ammunition makes them 150-yard rifles at most, and they are not very flexible for hunting. But for many common scenarios, those disadvantages are precisely the strength of the handgun-caliber rifles, and for many uses, they're actually more suitable than full-powered rifles.

Those who decide that the concept makes sense have many good options when it comes to selecting a rifle or carbine to match the caliber of their handgun. Lever-action rifles from Winchester or Marlin come chambered in competent revolver calibers that are easy to shoot in a rifle, but offer substantially increased power over a handgun in the same caliber. A .357 Magnum load that clocks 1,400 feet per second out of a four-inch revolver barrel will leave the muzzle of an eighteen-inch carbine barrel at over 1,800 feet per second, and develop eight or nine hundred foot-pounds of muzzle energy. That kind of ballistic performance puts it well above the best handgun rounds when it comes to stopping power, and even makes it sufficient for hunting deer-sized game, all while offering moderate recoil, high capacity, and the fast handling of a lightweight carbine. For those willing to trade the extra power of a Magnum round for faster reloads and ammo commonality with semi-automatic pistols, companies like Kel-Tec and Beretta offer carbines that will in many cases even use the same magazines as their companion pistols. And for the tactically inclined, the popular AR-15 rifle system has many upper receiver assemblies in pistol-caliber rounds available for it. This enables owners of the AR-15 to turn their familiar .223-caliber rifles into lower-powered training tools, plinkers, or fast-handling home defense carbines. The modular nature of the AR also makes it possible to put together a dedicated pistol-caliber training rifle that looks, works, and handles just like the same rifle in a bigger caliber.

A note on the lever-action carbines widely available due to the current popularity of Cowboy Action Shooting: some people consider them obsolete old-time technology, but they have several real-world advantages relevant to modern-day use. They have tubular magazines, so besides offering a reasonable capacity for most uses – six to ten or more rounds depending on caliber and magazine tube length – they can be topped off after every shot if needed. Lever-action rifles also don't have detachable magazines, which means that shooters on a budget can own a practical rifle without having to invest in a stash of magazines. They offer adjustable power levels – you can load a lever-action carbine chambered in .357 Magnum or .44 Magnum with soft-shooting .38 Special or .44 Special loads. Lastly, lever-action rifles

look traditional and non-martial, a consideration in some unfriendly jurisdictions where even SKS rifles and Ruger rimfire carbines are sometimes labeled "assault rifles", and the sight of a collapsible-stock, all-black AR-15 will result in unfriendly looks or law enforcement attention. Political realities being what they are in some parts of the United States, a wood-stocked "cowboy gun" gets less attention at the range, and looks like less of a liability in the courtrooms of

jurisdictions hostile to gun rights.

The "Frontier Logistics" setup of a handgun and long gun that can be fed from the same ammo box has its limitations. A pistol-caliber carbine is not as powerful or far-reaching as a rifle firing a bottle-necked cartridge. For those who would like to have a sensible defense battery on a budget, however, the idea has a lot of merit. There's only one kind of ammunition to buy for both rifle and handgun, and it's much more affordable than full-power rifle ammunition. It's possible to practice more for the same ammo budget, and in locations closed to most other rifles. A pistol-caliber rifle does an adequate job for many tasks for which the average suburban gun owner needs a rifle. For home defense use, its limitations actually make it a better choice for many people than a more powerful rifle. And lastly, all the rifles in pistol calibers out there are just a lot of fun to shoot.

Anyone looking to buy a long gun for plinking, practice, or home defense ought to consider the merits of having a low-recoil companion to the pistol or revolver they may already own. The pistol-caliber rifle is a fun, useful, and economical addition to the gun safe.

Dillon Leather b

When we lost our supplier for Dillon Leather, we considered abandoning the gunleather business. Fortunately, we were able to team up with Mitch Rosen Extraordinary Gunleather to continue to offer a best-quality, made-in-the-USA line of belts and holsters. We know you'll like these products — we're happy to have our name on them.

Stylemaster-DL \$150

A superior shoulder rig made of best-quality leather with solid brass fittings — no cheap plastic, no soft suede or other low-quality leather.

The Safepacker

THE WILDERNESS' SAFEPACKER™ HOLSTER is the **ONLY** mode of concealed carry that I have personally witnessed save a man's life. It's a long story, but suffice it to say that the element of surprise afforded by the Safepacker did the trick. The folks at The Wilderness contend that the Safepacker™ is the best, most versatile and utilitarian holster in the world. I tend to agree, because the one you see pictured at left...is mine.

Mark Pixler, editor

The Safepacker can be hand carried like a day planner, equipped with a shoulder strap (not included), slipped into an attaché case, opened with the top flap stuffed between the mattress and box springs on your bed, strapped to a seatbelt, attached to a sun visor, clipped to a backpack, or worn on your hip as a very low-profile "un-holster."

- "Government Model" Safepacker, RH **K19-11703 \$89.95**
"Government Model" Fits: Colt Government Model, GLOCK 17/18/20/21/22, SIG P-220/226, Beretta 92/96, HK USP-45, 4" K-Frame, 3" N-Frame, etc.
- "Commander" Safepacker, RH **K19-11702 \$89.95**

THE WILDERNESS TACTICAL PRODUCTS

The Wilderness' Original Instructor Belt is an incredibly strong belt with a specially designed "V" ring buckle. Imitation is the sincerest form of flattery, and the marketplace is full of copies of this belt, but none can compare to the original.

We're selling the five-stitch version, which has extra stitch lines to make the belt more rigid vertically in

order to better support holsters, magazine pouches and other gear. This belt is a favorite with law enforcement, military personnel, firefighters, paramedics, etc. Note: The 1.75" belt works best with BDUs or jeans. The 1.5" belt features a scaled-down buckle.

Uncle Mike's Kydex Holsters

Michaels of Oregon's injection-molded Kydex holsters have a level of detailing, quality and affordability unmatched by other manufacturing methods. The almost-vertical rake allows for behind-the-hip carry, and for some applications, the holster can function as a crossdraw. Smaller-size holsters can also be used for "appendix" carry. To aid concealment and to assist in the draw, the holster rides close to the body at a mid-level height. The injection-molded belt loop is designed to accept and support a variety of belts from 1" to 1.75" wide.

**Holster NOT
Included**

The key to the successful gunfighters of the Old West was not so much the weapon of choice, but rather the holster. How quickly the weapon could be retrieved, aimed and fired was the difference between survival and becoming a statistic. The Close & Ready Holster Caddy provides a faster and safer way to protect your family. It works with most existing holsters and slides easily between the mattress and box springs on either side of your bed.

"Wild Bunch" 1911 Holster & Mag Pouch

This holster/mag pouch was designed in a joint effort by World Cowboy Action Shooting Champion Gene "Evil Roy" Pearcey and World Fast Draw Champion Bob Mernickle when SASS introduced the "Wild Bunch" category for Cowboy Action Shooting.

When these two champions put their heads together, they created a holster and mag pouch that look like they were made at the turn of the century, yet feature state-of-the-art speed and accuracy. The holster is hard molded so as not to lose its shape even after thousands of draws. It spaces the pistol's grip frame

away from your body so you'll get a full combat grip, and the holster includes the T-nut lock system to ensure that it stays in place during a draw.

The mag pouch spaces the magazines so when you grab one mag, the second isn't in your way; above the belt line so the belt doesn't interfere with the draw; and at the max depth required by the sport – and no more – so you'll get a full grip and the ability to index with your forefinger for a rapid mag well insert.

SUPER 1050

STANDARD FEATURES:

- Automatic Indexing
- Commercial Grade Machine
- Swages Military Primer Pockets
- Loading Rate: 1000-1200 Rds/Hr
- Includes One Caliber Conversion
- Factory Adjusted Reloading Dies
- Automatic Powder Measure
- Automatic Primer System
- Automatic Casefeeder

All for ONLY...

\$1689^{95*}

*Prices vary on exotic-caliber machines.

Dillon Range Bag

Dillon's Modular Range Bag features a MOLLE-style fastener system to make it easy to reconfigure the bag to fit your individual needs. The end compartments and side compartments are removable, and extra end compartments are available.

The Range Bag comes with a removable, open-topped Stage Bag, so you can carry your ammo to shoot a stage

without having to take the entire bag. The main compartment is designed to hold the Stage Bag or a Border Shift Ammo Bag (sold separately below), as well as a Dillon Large Utility Box (see Page 36).

XL 650 (Electronic Scale)	K19-22118	266.95

Strong Mounts

Increase the stability of your reloading bench with Dillon's new Strong Mounts. These heavy gauge steel Strong

Mounts increase the machine's "foot-print" to over 10", spreading the load over the whole bench instead of stressing the leading edge.

Strong Mounts raise your machine 6" to 8", providing a comfortable work height for people who prefer to stand while reloading. For some XL 650 owners, overhead clearance can become a problem, so we designed a mount especially for this application. The XL 650-only mount raises the machine 6" above the bench top.

All mounts come with all the fasteners necessary to mount your machine (550/650 mount includes RL 550B bin bracket) and are coated with a durable black wrinkle finish.

SDB Mount	K19-22223	\$64.95
RL550/XL650	K19-22051	48.95
XL650-only	K19-22052	45.95

Bullet Tray Kits

Dillon's Original RL 1000 came equipped with a simple, shallow aluminum bullet tray that was designed for economy of motion when loading. For years, our attempts to duplicate the efficiency and the "feel" of that tray in other machine applications were less than satisfactory. It took the development of the Strong Mount for the RL 550 and the XL 650 to enable us to place the redesigned tray exactly where it needed to be.

Our aluminum tray works on the Square Deal 'B', the RL 550B and XL 650 when equipped with the RL 550/XL 650 Strong Mount, and a separate kit is available for the RL 1050. Comes with a Dillon Blue powder coat finish.

Bullet Tray Kit	K19-22214	\$41.95
RL 1050 Tray Kit	K19-22215	41.95

RL 550B/XL 650 Toolhead Stands

This all-metal stand provides a place to store your complete caliber conversions: toolhead, reloading dies, powder measure, shellplate and locator buttons. The mounting system makes it possible to secure the toolhead stands to your bench, keeping them from getting knocked over by your well-meaning-but-clumsy shooting buddies.

Dillon's new toolhead stands are finished with a high-quality, durable powder coating designed to meet the needs of even the highest volume, commercial reloading operation. They are available individually or in packages of three, and are packaged with reloading data labels to help you record your favorite loads.

550/650 Stand	K19-22055	\$20.95 ea.
Three or more,	\$18.95 ea.	

Low Powder Sensor

Dillon's new Low Powder Sensor provides an audible and visual reminder when it's time to refill your powder reservoir. When the powder level drops to about 1,000 grains remaining in the reservoir, a buzzer will sound and a bright red LED will light.

This simple, but effective, device is designed to fit all Dillon powder measures. Made of clear polycarbonate, it simply replaces the die-cast metal lid supplied with the measure, and operates on two AAA batteries (included).

Sensor	K19-16306	\$41.95

Dillon's Pistol Die Sets

Size Die

- Floating Decap Assembly Eliminates Primer "Draw Back"
- Long, Tapered Carbide Ring
- Radiused Opening Makes Progressive Loading Smoother

Seat Die

- Reversible Seating Stem Makes it Easy to Change Bullet Styles

Crimp Die

- Quick Disassembly, Easy to Clean

Sizing/Depriming Die

Our sizing/depriming dies feature a unique "floating decap assembly" with a snap spring that throws the spent primer off the pin and eliminates the problem of primer "draw back" that often occurs when decapping military brass. The primary feature of Dillon's size die design – the long, tapered carbide ring with a radiused opening – remains unchanged.

That radiused opening, and its importance to progressive reloading, is one of the reasons why our seat and crimp dies are better. We found a way of manufacturing these dies that has enabled us to make the lead-in radius even bigger! The bigger radius makes progressive loading with our equipment even smoother – but that's still only a part of the story.

Bullet Seating Die

Our new quick-disassembly seat die allows the user to disassemble and clean the seat die without losing adjustment. In this manner, bullet lube and shavings can be quickly removed from the die, thereby guaranteeing a constant seating depth. We've incorporated a "flip-flop" seating stem and a clip that enables you to remove the die insert and change the seating stem from round nose to semi-wadcutter without unscrewing a seating stem out of the die body. We've always included both types of seating stems, but the new double-ended design makes it a simple matter to remove a pin, reverse the seating stem, make any minor seating depth adjustments that may be necessary and go on loading in a fraction of the time it used to take.

Crimp Die

We've made it easy for you to remove the die insert for cleaning without having to change the critical crimp adjustment. Once your crimp die is set for the proper amount of crimp, you'll never have to change it. This is especially good news for all of you who load lead bullets! Before, you had to unscrew the die from the toolhead and disassemble the die in order to remove any bullet lube or lead residue. Then, you had to start from square one to re-adjust the crimp. Those days are over. All you have to do now is pop a clip and the die insert drops into your hand for cleaning.

NOTE: All Dillon Pistol Die sets include our sizer/ decap die, seat die and a separate crimp die. (Taper crimp for autos; accu-crimp for revolvers.)

---------------	-----------	--------

Dillon's Rifle Die Sets ³⁵

Size Die

- Full-length, to minimum tolerance
- Carbide expander ball
- Features stuck case remover

Seat Die

- Designed to hold bullet straight throughout the seating process

Taper Crimp Die

- Centers case neck and body for a more uniform crimp

Dillon Three-Die Rifle Die Sets include a sizing/depriming die, a bullet seating die and a taper crimp die. Dillon Two-Die Rifle Die Sets include a sizing/depriming die and a seat/crimp die.

Sizing/Depriming Die

The sizing/depriming die is full-length, to minimum tolerances, sizing cases down to function in semi- and full-automatic firearms. We strongly suggest that a headspace case gage be used to correctly adjust the size die.

For high volume users, such as commercial reloaders, law enforcement agencies, and high power or service rifle competitors, we also offer .223 and .308 die sets with a full-length carbide sizing die. Lubrication is still required, but the increased scratch resistance and die longevity of carbide are of great benefit to these groups of users.

The depriming assembly includes a carbide expander ball for "squeak-free," effortless neck expansion. This expander ball is located in the middle of the depriming stem to take advantage of superior initial leverage for easier extraction.

In the event of a stuck case, the design of the depriming assembly allows it to function as a stuck case remover.

Bullet Seating Die

Our bullet seating die is internally designed to keep the bullet straight throughout the seating process. Once properly adjusted, the only measurable runoff will be that which is inherent in the bullet.

Taper Crimp Die

The taper crimp die is also specially configured to center both the case neck and the case body, thereby aligning the entire cartridge for a more uniform crimp. Dillon Rifle Dies are designed to meet the more rigid requirements for both accuracy and precision demanded by today's marksman.

A taper crimp die is preferred for loading ammunition intended to be used in semiautomatic firearms with detachable box magazines, and in lever-action firearms with tubular magazines.

Dillon Rifle Dies (Three-Die Sets)

NOTE: ".38" series cases fit .38 Super, .32-20, .30 Carbine and .30 Mauser; "9mm" series cases fit .30 Luger, 9 x 21 and .380; ".44" series cases fit .41 Mag, .44-40 and .45 Colt; and ".45" series cases fit 10 mm and .40 S&W. "Small rifle" cases fit .222, .223 to 7.62 x 39 length; 20 round "medium rifle" cases fit 7.62 x 39, .22-250 to .30-06 length; 50 round "medium rifle" cases fit .22-250, .308 to .39-30 length; and "large rifle" cases fit .30-06, 8 x 57 length to all belted cartridges.

Extra Loading Data Labels, K19-10446, Package of 100, \$6.95

Try a few of Dillon's heavy-duty, lightweight plastic ammo boxes. If you're like us, you're tired of crumbling styrofoam and cardboard boxes held together with layers of tape. These boxes are perfect for range or field use.

Designed to keep out dirt, dust and rain.

Dillon AkroBins

AkroBins are perfect for reloaders who load several calibers, bullet weights, bullet shapes, etc. We've been including these bins with our machines for years, and now we're stocking them in quantity for our customers.

- The small bins (the ones we use as Square Deal "B" cartridge bins) are 4-3/4" long x 3-7/16" wide x 2-13/16" deep.
- The RL 550B/XL650 cartridge bins are 6-3/4" long x 3-7/16" wide x 2-13/16" deep.
- The 1050 bins are 10-1/4" long x 4-3/8" wide x 4-3/4" deep.
- The double-extra-large bins we use on our SL 900 measure 13-3/4" long x 6-1/2" wide x 6-3/4" deep (all inside dimensions).

AkroBins are made of heavy-duty polypropylene with permanent, molded-in color (ours are blue). They're virtually unbreakable; unaffected by weak acids and alkalis, and are also water, rust and corrosion proof. Hang 'em, stack 'em, rack 'em and fill 'em – you just can't beat 'em! Buy several and get your "stuff" together.

Dillon Utility Boxes

Dillon's Utility boxes are ideal for all those accessories that don't quite fit into the compartments of your shooting bag. The large box measures 13-1/2" x 5-3/4" x 2-1/4" and the small box measures 4-5/8" x 6-3/8" x 1-5/8". Use them for cleaning gear, extra magazines, repair parts, first aid supplies, reloading accessories and tools – the list is endless.

'Belted Magnum' Powder System

Magnum rifle cartridges can require from 70 grains to well in excess of 100 grains for a single charge. Our "Belted Magnum" Powder System features a maximum-capacity steel powder bar that can dispense more than 100 grains of extruded IMR powder.

Like all of Dillon's powder measures, the Belted Magnum Powder System is case-activated and can be used with your RL 550B, XL 650 or AT 500 reloader. It's ideal for loading large-caliber magnum rifle cartridges. We tested this system with various extruded rifle powders and found that powder charge variations stayed within plus-or-minus three-tenths of a grain.

The "Belted Magnum" Powder System is based on our SL 900 Shot Dispenser, so the Maximum Charge Bar won't work in our standard powder measures – you'll need to buy the entire system. The good news is that the "Belted Magnum" Powder System has an integral drain, so it's easy to empty the hopper in order to change powder types; so, if you load several big calibers with various powders, it's easy to switch from one to another.

Keep plenty of extra powder on hand, because when you're dispensing 100-plus grains into every cartridge, you're gonna need it!

Magnum Powder System **K19-97126 \$137.95**

PROTEKTOR MODEL

The Original Leather Sandbag* Rifle Rests

All Protektor Model leather bags are made with the best top grain cowhide available. The welded steel rest is strong enough to stand on and won't break if dropped (Owl Ear Front Bag sold separately).

Attain Peak Accuracy With Hornady's L-N-L O.A.L. Gauge, Bullet Comparator

Overall Length Gauge

The initial distance a bullet must travel when fired (from the cartridge case mouth until it engages the rifling) is absolutely critical to achieving peak accuracy. A free run of .010 to .060 is commonly employed for accurate target, varmint and hunting loads. Consequently, knowing and being able to alter the dimensions, as needed, is vitally important to precision shooters and handloaders.

Bullet Comparator

Correct bullet seating depth is critical to accuracy. In addition, minor variations in bullet seating depth will have an effect on both pressure and velocity. The L-N-L Bullet Comparator provides precision handloading dimensions.

“Pedersen called it an ‘automatic bolt’...it operated pretty much like a semiautomatic blowback pistol, but its framework was a slightly altered Model 1903 rifle...it had an ejection port cut into the left side of the receiver.”

By John Marshall

When the United States entered World War I (then known as “the Great War”) in 1917, the search was on for more effective weapons with which to conduct trench warfare. It was felt that a high-capacity semiauto rifle firing a smaller reduced-power cartridge would be valuable. The standard .30-06 cartridge used in rifles and machine guns was unnecessarily powerful for close work in the trenches, and the manually operated bolt rifles were slow and awkward to operate.

John Douglas Pedersen, a talented designer who was then working for the Remington-Union Metallic Cartridge Company in Bridgeport, Connecticut, set about to work on that challenge. The solution he came up with was quite innovative. In the summer of 1917, he requested a secret demonstration of what he had developed for the Army Ordnance Department. Given Pedersen’s sterling reputation for design work, his request was granted and a demonstration was conducted on October 8, 1917.

Present were General William Crozier (the Army Chief of Ordnance), and a select few congressmen, all of whom had been sworn to secrecy. What they saw on that day was revolutionary. Pedersen began the demonstration by firing what appeared to be a standard Model 1903 rifle, operating the bolt normally. After he fired a few shots, he quickly removed the bolt and dropped it into a special pouch attached to his belt. He then produced a strange, longish device from a scabbard on his belt, inserted it into the bolt raceway in the rifle, and latched it in place using the magazine cutoff thumbpiece on the rifle. Then he snapped a magazine holding 40 pistol-sized .30 caliber cartridges into the device. This projected at an angle to the right of the rifle, allowing use of the standard sights. He then charged the device by pulling and releasing a heavy spring-loaded block on the back of it. He quickly proceeded to fire 40 shots as fast as he could pull the trigger.

The witnesses to this event were duly impressed, and the potential for the use of this invention in trench warfare was immediately rec-

ognized. Pedersen called it an “automatic bolt” but almost immediately it became known as the Pedersen Device. It operated pretty much like a semiautomatic blowback pistol, but its framework was a slightly altered Model 1903 rifle. The barrel of the device, which inserted into the chamber, was configured to the dimensions of the standard .30-06 cartridge case, and the small .30-caliber cartridge chambered in the breech of that barrel. This barrel within a barrel was rifled to start the bullet spinning down the regular rifled tube of the rifle. The rifle itself was slightly altered. It had an ejection port cut into the left side of the receiver, and the trigger mechanism was modified to allow both semiautomatic firing and the release of the firing mechanism in the standard bolt. The magazine was secured in place by two spring-loaded catches.

While the cartridges used were similar to .32 ACP pistol rounds, the bullets were .30 caliber, full metal jacketed, and weighed 80 grains. A charge of 3.5 grains of smokeless powder propelled the projectile at approximately 1300 feet per second, resulting in a muzzle energy of about 300 foot-pounds. That doesn’t sound like much, but being fired from a 24-inch barrel, it was way more powerful than similar rounds fired from a pistol. The device itself was carried on the belt in a special metal scabbard with belt hooks, and a web pouch was provided for the standard bolt when removed from the rifle. Two canvas magazine pouches held five magazines each, allowing a basic load of 400 rounds to be carried on the person. Each loaded magazine weighed about a pound, and the device itself weighed a little over two pounds. With rifles using these devices the trenches could easily be dominated with withering fire.

In November of 1917, a sample of the device was delivered by Captain J.C. Beatty to General John Pershing, the U.S. Army Expeditionary Force commander in France. Beatty was sworn to secrecy on the project; it was all classified as Top Secret. On December 9 of that year, General Pershing convened a board consisting of Captain Beatty and four senior Ordnance officers. They tested the device for rate of fire, accuracy, pene-

The Pedersen Device

uch like a
tly altered
ne receiver....”

tration and reliability. Pershing was so impressed with the results of this test that he sent a memo to the Chief of Ordnance recommending an initial purchase of 100,000 of the devices and 5,000 rounds of ammunition per gun, providing a daily supply of 100 rounds per gun. He strongly believed it would do wonders for their efforts in France. Another memo soon followed, which stated “Desire 25,000 Pedersen attachments to be held in reserve. Replacements 50% per year on devices, and 200% on magazines. Request 40 magazines be shipped with each device. When will shipments be made? – Pershing” Pershing was anticipating a huge offensive push in the spring of 1919, and wanted lots of these devices.

Because of its Top Secret classification, the device was given the intentionally misleading name of “Automatic Pistol, Caliber .30, Model of 1918, Mark I.” The ammo boxes were marked “40 – CAL. 30 AUTO, PISTOL / BALL CARTRIDGES / MODEL OF 1918” All the ammunition was produced by Remington-UMC, and this was marked on the boxes. The production of this ammo caused some speculation and dismay in the press that the armed services were now using some sort of pipsqueak pistol to replace our Model 1911 .45 ACP handgun!

The eventual order placed with Remington was for 133,450 devices, and a contract was let for 800 million cartridges. These would be packed 40 to a box, each box enough to fill one magazine. Rock Island Arsenal produced the pouches for the bolt and magazines, and Graham Manufacturing Company made the scabbards for the device. Springfield Armory began manufacture of the modified '03 rifle, which was dubbed the “U.S. Rifle, Caliber .30, Model of 1903 Mark I.” As stated, the major differences from the regular '03 were the ejection port, the trigger mechanism, the cutoff latch, and a stock relieved under the ejection port. Production of these rifles began in December 1918 and continued until March 1920. 97,520 Mark I rifles were made, with serial numbers running from 933045 to 1186358. Most were finished in black Parkerizing, which had become the military standard.

World War I ended before any of the devices could be used in the war. A less hurried and more critical examination of the scheme revealed that the round was indeed quite underpowered, the equipment and ammo was heavy, and the potential for loss of the device and/or the bolt in the heat of battle was high. Some were actually used for gallery rifle practice and consideration was given to keeping them in reserve for riot control, but in April 1931, an order was given to destroy all the devices and their accoutrements. Most were completely ruined in bonfires and then deep-sixed. A very few were salvaged (i.e. stolen) to become incredibly expensive collector items today. Estimates vary on the number of surviving examples from a few dozen to as many as 100. The scabbards are even scarcer. The bolt and magazine pouches occasionally surface, but are fairly rare. A few “Mark II” devices, perhaps less than six, for the Model 1917 “Enfield” rifle are known. At least one was made to fit the Russian Mosin-Nagant rifle. The 1903 Mark I rifles were almost all re-converted to standard '03 specifications, and only a small number now remain in original device-ready condition. I’m fortunate enough to own one of these, which left Springfield Armory in November of 1919.

Today, a lot of people wonder about the hole in the side of the receiver when they encounter one, and the story behind that hole is still not widely known. As a side note, the French copied the .30 Pedersen cartridge and produced it as the 7.65 French Long. It was used in a couple of pistols and some submachine guns. The experimental work on these guns was done with Pedersen rounds purchased from Remington-UMC.

The Pedersen device was innovative, but became a dead end in firearms history. The devices and the rifles that used them are now very desirable classics. Few can afford one of the devices when and if one rarely becomes available on the collector market. The Mark I rifles can still be found here and there in varying conditions of originality. While not cheap, they’re considerably less expensive than the few remaining devices. There is a lot of history behind them.

The **M2 Chronograph** comes with sensors, screens and one two-foot mounting bracket. A nylon carrying case and tripod are available options. The **CED7000 Shot Timer** is a breakthrough in technology. No other timer to date offers this combination of advanced features, compact size and light weight. This is the "next generation" Shot Timer here today! Comes with a rechargeable battery with low-battery LCD indicator and a universal charger.

Take out your frustrations, and build your grip strength at the same time! Just think about...oh, the new Supreme Court, socialized medicine, tax increases, high-capacity magazine bans, etc., and use the one-pound ball. Or, think about the "bailout" legislation and the luxury resort vacation the execs at AIG enjoyed on YOUR DIME. You'll need the two-pound ball for THAT one!

*FAQ About Berry's Preferred Plated Bullets

1. What is "DS?"

"Double Struck." Double-Struck bullets go through an extra sizing process after being plated. This makes the bullet 100 percent symmetrical. This can give you an edge in competition, but most shooters won't notice the difference.

2. What is the difference between Plated/Jacketed/Cast bullets?

Berry's Preferred Plated bullets begin as a swaged lead core. The plating process works through electrolysis. The swaged lead cores are tumbled in an electrically charged cyanide bath containing high-grade copper ingots. The copper clings to the lead and the longer the bullets remain in the bath, the thicker the plating.

3. How do I load Berry's Preferred Plated Bullets?

Plated bullets occupy a position between cast bullets and jacketed bullets. They are soft lead, but have a hard outer shell on them. When loading plated bullets we have found best results using low- to mid-range jacketed data in the load manual. You must use data for a bullet that has the same weight and profile as the one you are loading. Do not exceed mid-range loads.

4. How fast can I shoot these bullets?

Velocities depend on the caliber, but as a rule of thumb, we recommend you don't shoot our plated bullets over 1200 fps (feet-per-second). Our 44s actually shoot best around 1150 fps. 45s are generally good at 850-900 fps. Our bullets are NOT recommended for magnum velocities.

5. Can I shoot your plated bullets in my GLOCK?

Yes. We have a large contingent of loyal GLOCK shooters using our bullets. The plating is thick enough that you will not get lead fouling in your bore, which is the nemesis of polygonal barrels.

*DS = Double Struck, TP = Thick Plate, HB = Hollow Base, RN = Round Nose, FP = Flat Point, SWC = Semi Wadcutter, WC = Wadcutter

About SNS Casting: SNS Casting, Inc. is a family owned and operated business located in rural Flanagan, Illinois and was officially founded by Jim Stinar in the winter of 2008. Jim's casting history actually began in the mid 1980s as a hobby. This supplied not only himself but a group of friends and fellow avid shooters who were tired of paying too much for inferior products. Eventually, word was spreading throughout the surrounding states of his bullets, which were priced right for the quality.

Today, SNS Casting features four of Magma Engineering's Mark VIII casters and two Lube Master luber/sizers fitted with M-A Systems Collators. **Our lead is a certified factory alloy of 92 percent lead, 6 percent antimony and 2 percent tin, which is purchased in 44,000-pound lots to ensure consistent quality. The lube we use is Magma blue lube.**

We have two full-time employees at SNS Casting. Jim Stinar and son Ryan are avid USPSA (A30909, A63666) shooters, SASS members and NRA members.

NOTICE: There is a \$20.00 minimum 'Hazardous Material' (HazMat) handling fee for shipping PRIMERS. This fee is assessed in increments of 10,000 primers. Primer orders MUST be shipped separate from other items, and require a separate shipping and handling charge. Shipping and HazMat fees are not included in prices.

Bore-tips™ Bore Cleaning Foam Swabs

No s#!+, there I was...in my office, cleaning my 686 SSR when the boss walks in with that "whisky-tango-foxtrot" look on his face. "Hi," I said (*thinking fast*), "I'm trying out these Bore-tips before I write the *Blue Press* copy for them. They work GREAT!"

The Bore-tips Swabs REALLY DO work. What you can't see under the foam is a plastic jag sized for a tight bore fit

which provides for the uniform application of solvents and oils. They work with all standard 8-32 thread cleaning rods, and are tough and reuseable.

'Plan B' Day Planner

Dillon's "Plan B" Day Planner Holster holds a handgun and a spare magazine or pepper spray, yet it fits in with business clothing and won't draw undue attention. It looks like a typical day planner, but inside there's a holster that's adaptable for either right- or left-hand draw. It fits most .380, 9mm, .40 and .45 caliber autos, including: Beretta, Colt, GLOCK, HK, Kahr, Kel-Tec, Ruger, Taurus, SIG, and Smith & Wesson. Will also hold small-frame revolvers with two- to four-inch barrels.

"Plan B" Day Planner

Concealed Carry Tote⁴⁷

\$45⁰⁰

K19-18193

Dillon's Concealed Carry Tote accommodates all the tools you need to survive the urban jungle!

This low-profile carry case looks like a mild-mannered-computer-nerd accessory, but it's designed for your pistol as well as your PC! Made of rugged nylon fabric, with heavy-duty zippers on all three main compartments – one designed to hold a laptop computer, one for folders and paperwork, and one in the middle for a handgun.

Inside the case are pockets and pouches that will hold spare magazines as well as folding knives, letter openers, flashlights, cell phones, full-sized 8.5"x11" paper note pads, etc. Measures 13.5" x 11.5" x 6.5" deep.

TUFF PRODUCTS MAG POUCHES

Front view with flap.

Front view without flap.

Rear shows loops and Molle fasteners.

Tuff Products Magazine Pouches are the most versatile we've ever seen. They can be worn on a belt or attached to anything that has a MOLLE fastener system; for instance, the Dillon Range Bag, a tactical vest or body armor carrier. Available in black or coyote brown.

Comtech's STINGER

THE STINGER: Comtech's own personal defense device. Designed to act as a "force multiplier," it's like having the punching power of a karate master – instantly! There's really nothing like it for easy carry and access. Plus, it passes un-noticed by 90 percent of people who see it. Yup, just another "keychain device" to most, and yet it works so well when needed. You'll love your Stinger and undoubtedly draw a great deal of security and peace of mind from it's mere presence. You deserve a Stinger today!

Cavalry Arms Medical Trauma Kits

Nobody likes to think about it, but should a serious hunting/shooting accident occur, chances are the drugstore "first aid kit" you have stashed under the seat of your truck won't do much good. That's why Cavalry Arms Medical has produced trauma kits designed by Armed Forces medics.

The Cavalry Arms Medical P.T.K. (Personal Trauma Kit) contains a 15-gram package of Celox granules to control serious bleeding, Nitrile gloves, a high-intensity Chem-Light, a six-inch Emergency Bandage with a second pad, and a 4.5-inch Kerlix Roll.

The A.T.K. (Advanced Trauma Kit) contains one 15-gram package of Celox granules, Nitrile gloves, a CPR Face Barrier, two VioNex Anti-Microbial Wipes, a high-intensity Chem-Light, two 4-inch Emergency Bandages, one 4.5-inch Kerlix Roll, two 2-inch Kerlix Rolls, one 3-inch Elastic Bandage, and two 5 x 9-inch sterile Abdominal Pads. All contents of both kits are currently in use by real-world combat medics.

Personal Trauma Kit (P.T.K.)

The Dillon Shooting Mat

Dillon's shooting mat is made of tough ballistic-weave nylon fabric, with a large skid-resistant elbow pad area. The "ground" side is moisture resistant and wipes clean easily.

The padding is dense, closed-cell foam to provide both shooter comfort and a stable shooting base. The mat is equipped with a shoulder strap, a carry handle and two straps with snap-release buckles.

Dimensions: 66" x 27.75"

Deluxe Set: 510.5 grains for bullets, cases and powder.

K19-12458 \$49.95

A characteristic of virtually all progressive reloading machines, regardless of brand, is that the dies are set rather close together. When you are first setting up a "naked" machine, there is plenty of wrench room, but if you have a need to adjust a die afterward, it often requires a delicate touch to maneuver a lock ring on a crowded toolhead.

Dillon Precision has addressed this in two ways. We now offer new 1" die lock rings and a 1" Bench Wrench to fit them. This combination gives much more room to re-adjust dies after they're already mounted. The opposite end of our new wrench is a 7/16" box-end for adjusting the Powder Bar of any Dillon Powder Measure. Our new lock rings fit any standard 7/8" x 14 dies.

Apex Tactical Specialties Armorer's Block

Apex Tactical Specialties' Armorer's Block is designed for S&W Semi Auto M&P Pistols in all calibers, sizes and configurations, including thumb-safety models and the M&P Shield; also for GLOCK® semiauto pistols in all sizes and calibers. The Armorer's Block supports a pistol for armory work and detail disassembly. Its pre-positioned bosses, slots and holes remove pressure from critical function surfaces while pins are driven in and out. High-density polymer construction prevents marring of the frame while driving pins in and out. Made in USA.

Ghost 3.5 Trigger Stop Connector

A. The Ghost 3.5 Trigger Stop Connector shortens trigger movement, eliminates over-travel and provides the fastest trigger reset. Can be fitted to all GLOCK pistols.

3.5 Trigger Stop **K19-14760 \$24.95**

Ghost Bullet and Forward Slide Release

The Ghost Bullet Slide Release was designed with a wider, longer thumb tab that is unobtrusive and sits closer to the frame when not in use. The Forward version addresses the issues of shooters who use the "modern technique" (with thumbs high and pointing towards the muzzle) by placing the thumb tab forward so that it sits between the thumbs, eliminating the problems shooters experience with the modern technique. It also places the thumb tab within easy reach of the forefinger of left-handed shooters.

B. Bullet Slide Release **K19-18630 \$14.95**

C. Bullet Forward Slide Release **K19-18629 19.95**

Lone Wolf Distributors' Match-Grade Barrels for GLOCK Pistols

These replacement barrels are manufactured from the highest grade mill-select 416 stainless forgings. Standard land-and-groove rifling makes these an excellent choice if you wish to shoot lead, plated or jacketed bullets. Can be used in factory ported or stock pistols. Ready to use, pre-fit drop in. No gunsmithing required.

60 The IDPA Classifier; Stage 3, String 13: B

By Duane Thomas

Stage 3, String 13 of the IDPA classifier is shot from around a barricade at 20 yards, and from low cover – almost invariably represented by a 55-gallon drum – at 15 yards.

STRING 13: Draw and fire 2 shots each T1-T3 from side of barricade, reload, advance to low cover and fire two shots each T1-T3 around its side.

(My time: 15.97 seconds.)

Tip #1: Standard advice for Stage 3 is, “On String 12 do a Reload With Retention (RWR), where you put the old magazine away before you draw the new one, as you’re moving the gun from one side of the barricade to the other, because it’s a simpler, faster sequence of movements than a Tactical Reload (TR) where you have to put the old magazine away before you can draw the new one, HOWEVER on String 13 do a TR so you can be storing the magazine as you’re moving to the barrel instead of having to stay behind the barricade until you’ve put it away. This can save you a couple of seconds versus having to complete an entire RWR before you move out.”

Some people think this is just the slickest, sneakiest, time-saving trick ever. Or is it? I’ve timed myself using both methods. For me at least, the time difference between the techniques wasn’t nearly what’s promised. Measuring only the time between the last shot at the barricade and the first shot at the barrel, I was consistently a half second faster using a TR versus a RWR – when everything went right. The problem was, everything didn’t always go right. Trying to do one sort of reload for String 12, then another for the very next string would often screw me up, I’d hesitate during one or both strings because I couldn’t remember which reload I was supposed to be doing. Also, sometimes on the TR I wouldn’t be able to get the mag put away as fast as I wanted while running forward. I was practically to the barrel before I had the mag out of my hand and could reacquire my two-hand grip on the gun. This led to me feeling pressed for time, really rushed when I reached the barrel.

Finally, I decided to do RWRs on both Strings 12 and 13. The simplicity and surety that comes from doing the same reload on both strings, to me outweighs a theoretical time advantage that often does-

1. When moving between barricade and barrel, move fast. You can save yourself entire seconds here if you’ll simply RUN.

2. Running for the barrel, keep the gun high, both hands on the gun.

n’t materialize. Actually, with the “which am I doing now?” fumble factor I was often slower with a TR. Also, when I’ve already put the magazine away behind the barricade using the RWR, I can complete my run to the barrel with both hands already on the gun the entire time. Thus I feel less rushed, much more in control when I arrive at the barrel.

Tip #2: As you move forward, RUN. I mean really hit the accelerator. Though that seems self-evident, I see people all the time loping forward slowly, or actually walking, between barricade and barrel. (These are usually the people simultaneously trying to stuff a magazine into their pocket after a TR to “save time”.) You can save yourself entire seconds here if you’ll simply haul ass.

Tip #3: Keep the gun high while moving. You’re just going to have to raise it up again before you

Barricade Work, Movement & Low Cover ⁶¹

Two steps before reaching the barrel, slow your forward movement, and get the gun out in your normal shooting arm position.

The author cants the gun to get it farther around the barrel.

can fire, so why lower it in the first place? I keep both hands on the gun. This is only a five-yard run, too short to get any real advantage from dropping one hand off the gun and chugging my arms. It's far more advantageous to move with both hands already on the gun so I don't have to break and reacquire my grip. One less thing to worry about. Simplicity is a virtue.

Tip #4: Two steps before you reach the barrel, slow down so you can move smoothly into position instead of having to screech to a halt right at the barrel.

Tip #5: Also two steps before the barrel, extend the gun out with your arms almost-but-not-quite in their shooting position. This will allow you to save time versus having to extend all the way out after you're down behind the barrel, also it gets the

front sight up into your line of sight, you can visually acquire it before you're even at the barrel.

Tip #6: You've arrived at the barrel. How close to crowd it, and which knee to drop to? As opposed to the barricade where there are major advantages to staying back from it, with low cover and wide transitions it works best to get as close to the barrel as possible. Whichever side of cover you shoot from, put that knee on the ground. I shoot around the right side of the barrel so I put my right knee down. This allows me to get much farther around the barrel, while still keeping my entire lower body behind cover, than if I went to the off-side knee.

Tip #7: When you arrive at the barrel, get down into position FAST. Some people try to synchronize lowering themselves into position with extending the gun to get it on target as fast as possible. It's never worked for me to do it that way because the gun completes its extension about the same time my knee hits the ground, causing the gun to bounce around like one of those little spring-loaded Chi-huahua heads. Then I have to wait until it stops if I want to be accurate. It works much better to get down fast with the gun up in front of my face, front sight already in focus, arms almost fully extended but not quite yet, THEN present it out that last little bit after I'm down, and I can fire as soon as my arms hit full extension.

Tip #8: While in the last article I discussed the advantages of not canting the gun, instead keeping it straight up-and-down while shooting from the barricade at 20 yards, here I will seemingly reverse myself and admit that I do cant the gun while shooting around low cover on Strings 13 and 14. Since we're now (a) closer to the targets at 15 yards instead of 20, and (b) having our knee on the ground severely limits how much we can move our body around the barrel in any sort of acceptably swift manner, the angle of our arms, and the gun, around cover is much more severe. I find it an acceptable tradeoff for me to cant the gun, allowing me to get it around the barrel faster, versus the slow process of trying to slide my knees around on the ground in an attempt to maintain a body position that will allow me to keep the gun straight up-and-down.

School Shootings Solution: Not Gun Con

By Selwyn Duke

In the wake of tragic Sandy Hook, many Americans are desperate to prevent further school shootings. Thus do we find ourselves debating two very divisive ideas: gun control and armed guards in schools. But there is another idea, one both simple and acceptable to virtually all: lockable, bullet-proof doors for classrooms and school entrances.

This is a commonsense suggestion that has precedent. After 9/11, we had similar debates to those raging now. Today we're divided over the idea of arming some teachers; back then there was rancor over the idea of arming pilots. Of course, we did finally appoint air marshals, the equivalent of armed guards in schools. Yet no one had to debate what was universally self-evident: the need to reinforce cockpit doors.

The cockpit door was a weak link that the 9/11 hijackers exploited to gain easy access to the pilots and airplane controls. Likewise, Sandy Hook Elementary's doors were a weak link; they were locked at 9:30 a.m., and video identification was conditional for entry, but murderer Adam Lanza was able to shoot his way in. Yet school doors are a weak link that is easily remedied.

There are many variations on the solution, each requiring different degrees of expense and offering different levels of security. The most secure option involves fitting all school entrances, as well as all relevant rooms within a school, with bulletproof doors that automatically lock upon closure. Here's how it would work: all school personnel and students would enter and exit the premises at one location, which would be manned when students arrived at, and departed from, school. It would be closed at other times, during which anyone who requested entry would have to be identified and buzzed in.

A secure entry door alone would greatly reduce the likelihood of another school shooting, but the inner locked doors would add another security layer. They also would lock upon closure and could be opened only manually from the inside. To ensure that one couldn't be locked out accidentally or by a mischievous student, entry would also be possible via electronic key cards – the kind common in modern hotels – which would be available only to school administration and would never leave the premises. The key cards and their receiver units would also be reprogrammed periodically. If this is deemed too restrictive, school personnel could be issued key cards allowing entry to the school and some or all inner rooms, but this reduces security, as it places the cards in wider circulation, increasing the chances that they'd fall into the wrong hands (not the likeliest scenario, though).

Many may view this maximum-security option as overkill, and it would be expensive. But it would reduce the chances of future school shootings drastically.

Another option involves lower-technology doors that could be opened only from the inside, or from the outside with keys. This may involve lower initial costs but require a sacrifice of security or a periodic change of locks to take the place of electronic-system reprogramming.

Another slightly less secure option involves installing doors that, while not necessarily billed as bulletproof, are for all intents and purposes impenetrable. As an example, consider the standard entry doors of homes and apartments in Poland, a nation I've visited. They often look like something befitting Fort Knox – Chuck Norris couldn't kick them down. In fact, I was present when firemen broke into the apartment of a person believed to be in distress; they had to use various tools, including a

hydraulic device, and it still took these professionals 10 to 12 minutes to gain entry. A lone maniac with a gun wouldn't have stood a chance.

Also note that Poles are poor by American standards, yet they all seem to have such doors. So the cost for us shouldn't be prohibitive. These "Polish doors," along with top-notch entry-door

security, are probably the most realistic option.

Less expensive still is to rely solely on the aforementioned bulletproof entry-door security. After all, if you can control who and what enters a school, what happens within it is of little concern. However, there would be a problem if this one layer of security were breached. Thus, whatever we do, there is no reason why schoolroom doors should be unlocked during class – or be unlockable (a student could still go to the restroom and be allowed re-entry).

I'll also mention that there already is an effort to address this weak-link door (WLD) problem. It's called the JAMBLOCK, a lightweight piece of steel that can quickly be secured under a classroom door, effectively locking it and greatly slowing the progress of anyone bent on breaking in. The problem, however, is that it's a half-measure. It doesn't create the virtually impenetrable barrier my preferred solutions would, and a teacher must become aware of a threat before it can be applied. And, well, using a play on that old saying, I wouldn't want mine to be the first door a bad guy came through.

Of course, nothing can completely eliminate the risk of school shootings or any other danger. There would be vulnerabilities even if the WLD solution were effected, such as periods when chil-

"The cockpit door was a weak link that the 9/11 hijackers exploited to gain easy access to the pilots and airplane controls. Likewise, Sandy Hook Elementary's doors were a weak link."

children file in and out of school, schoolyard recesses, and the possibility that a student has a weapon hidden on his person. Yet other measures could augment the WLD solution. For example, having metal detectors at the secure entrance, having the recess area within view of that entrance, and stationing one armed guard there would address all three of those problems. All these measures taken together would perhaps reduce the probability of another school shooting to near zero.

But this article's purpose is to focus on the WLD solution. And I'd like to make an appeal to those who would place emphasis elsewhere. Whether or not armed guards are a good idea, they cannot be everywhere at once; thus, advocating such without addressing WLD is like having air marshals but not reinforcing cockpit doors. If your preference is gun control, please consider that advocating such without addressing WLD is like outlawing box cutters (the 9/11 hijackers' weapons) but not reinforcing

cockpit doors. Neither option is a realistic substitute for a WLD solution.

Of course, mindful that the chance of dying in a school shooting approximates that of being struck by lightning, one could question the need for sweeping policy changes of any kind. Yet given how these rare events traumatize the nation, how they become politicized and used to advocate counterproductive policy, and the fact that there is clamor for a solution, finding one isn't unreasonable.

And if we safeguard our money in bulletproof trucks and vaults, can we justify a lower standard for our children? All of us, left, right, and center, should be able to come together in support of the WLD solution. It's common sense, it can be common ground, and, most importantly, it would work.

Read more: http://www.americanthinker.com/2013/01/school_shootings_solution_not_gun_control_or_guard_patrol_but_door_control.html#ixzz2HUHPBusd, or log on to SelwynDuke.com.

A Winner for the NRA Board: STEVE SCHREINER

Why vote for Steve Schreiner?

Schreiner is a Vietnam Vet, Airborne Ranger; awarded CIB, Bronze Star with V Device and Silver Star.

He is a noted supporter of the Second Amendment as exemplified by the following:

1. President, Firearms Coalition of Colorado;
2. Awarded NRA's Best Volunteer Organization of the Year;
3. Successfully Fought for Colorado's CCW;
4. Highly Successful Registered Lobbyist at Colorado Legislature;
5. Fought against semi-auto ban, magazine bans and "safe storage" bills;
6. Member of NRA's Grassroots Committee.

What I stand for:

1. We need to reach out to everyone, especially the younger generation, using their means of accessing information, about the positive aspects of the National Rifle Association and the Second Amendment;
2. We need more emphasis on range development and protection of existing ranges;
3. We need to protect our shooting rights in National Forests and on other Federal lands.

Steve Schreiner

President, Firearms Coalition of Colorado

*"Vote for Silver Star Recipient **Steve Schreiner** for NRA Board of Directors. I am encouraging NRA Board of Directors voters to utilize the 'bullet ballot' procedure. If you vote just for Schreiner, you increase his chances of being elected.*"*

Lt. Col. Robert K. Brown, USAR (Ret.)

Editor/Publisher, *Soldier of Fortune* Magazine

*Bullet balloting does not increase the number of votes cast for Schreiner but it does reduce the number of votes the other candidates receive which, therefore, increases the likelihood of Schreiner's election.

J. Dewey Mfg. Co.

Dewey's AR-Link Cleaning Pin utilizes the rear take-down pin in your AR-15 style rifle to hold the upper and lower receivers open for cleaning. It fits all AR-15s and AR-10s with standard and oversized take-down pins up to .316" in diameter.

To use, 1) Depress the rear take-down pin and pull out. 2) Pivot the upper and lower receivers apart. 3) Insert the pin on the AR-Link into the upper receiver take-down pin tab. 4) Close receivers with the AR-Link inserted into the lower receiver. 5) Push the take-down pin through the channel in the AR-Link to lock the upper and lower receivers into place. 6) Clean your rifle. 7) To remove AR-Link, reverse the above steps.

Evolution Gun Works

These two-piece flat checkered mainspring housings with bolt-on mag wells are similar to the patented one-piece S&A design. The mag well and checkered mainspring housing are machined from solid bar stock steel and can be used without the mag well attached, although there will be a small dovetail below (this does not impair function). This is a great replacement for plastic mainspring housings on full-size or commander model 1911s.

Ever Dream of Having Your Own Shooting Range? ⁷¹

By Mark Pixler

Like every other shooter I know, I've always wanted my own private range. When I moved to Phoenix in 1982, it was easy to find a piece of desert nearby with a good backstop where it was safe to shoot.

These days, however, the city limits have expanded to the point where shooters are forced to drive farther and farther to find places where it's safe (and legal) to shoot. Yes, there are some excellent public shooting ranges and private clubs in the area, but nothing compares to the convenience of having your own range.

I recently heard about a company in Burlington, Connecticut, called Bullet Trap USA that might just offer the ultimate solution to the problem of "Where can I shoot?" Their answer? "Pretty much wherever you want!"

Bullet Trap USA offers a range of bullet traps, sound abatement rooms, ventilation systems, HEPA filtration systems, perimeter warning alarm systems, and portable trailer-mounted bullet traps that make it possible to set up a shooting range virtually anywhere. Their bullet-trap technology uses AR500

steel to deflect projectiles and the deflection elements are rubber mounted. The mounts flex to absorb bullet energy, and there are no welds to break. The AR500 steel is cut using a waterjet cutting process, and no heat is induced to compromise the properties of the steel.

Bullet Trap USA's Model BT-36 features a large 36" x 36" target area. Other models with 24" and 48" target areas are available, as well as a Tactical Training Bullet Trap with a target area of 78" x 96".

misuse the properties of the steel.

Bullet Trap USA's traps are designed to stop everything from .22 LR to .458 Win. Mag. with no risk of ricochet or backscatter. The entire bullet trap unit can be disassembled for installation and is easily maintained. Trapped bullets are retained in a removable collection

pail, making the lead from spent bullets easy to recycle – an environmentally friendly way to prevent lead contamination indoors or out.

In addition to the obvious benefit to individual shooters, Bullet Trap USA's equipment is ideal for use by gunsmiths, gun shop owners, and military and law enforcement personnel. How much more would YOU shoot if it were that convenient?

For more information, call Bullet Trap USA at 860-673-7068, or visit their website: www.bullettrapusa.com

TACCOM, LLC Duaload Shot Shell Holders

TACCOM, LLC's Duaload Shot Shell Holder is available in 2-, 4-, or 6-Shell versions and can be customized to carry your shotgun ammo in several configurations. We're offering the 2Up version that can be either attached to a belt or MOLLE gear, as well as the 4Up and 6Up versions with a BLADETECH Tek-Lok™ Universal Belt Clip (included) that can be attached at various angles. The Duaload allows you to grab two shotshells aligned in such a manner that it makes it easy to load two at a time into your shotgun. It's quick, easy and (most important) intuitive!

**Enhanced Trigger
Guard, Aluminum
AR-15/M16**

The MagPul® Enhanced Trigger Guard™ is a black anodized aluminum drop-in replacement for the AR15/M16 weapons platform. It features a shallow "V" shape for better use of gloves in tactical shooting or cold weather operations. It's non-folding and has rounded edges.

Aluminum Trigger Guard

K19-12611 **\$19.95**

**"Battery Assist
Device" for
AR-15/M16**

Developed from the experience of the MagPul® Team, the B.A.D. Lever™ is designed to improve the speed and efficiency of the AR-15/M16 by enabling the shooter to manipulate the bolt catch without moving away from the ready position.

K19-18531 **\$6.75**

The Pressure Plug For AR15 .22 LR Inserts and Dedicated Uppers

Does your .22 LR insert move back and forth in your upper? Did you know that the very top of your lower receiver takes all the recoil of your .22 LR insert? You can eliminate those problems by inserting the pressure plug in front of your buffer. The front of the plug has a taper that allows you to open and close the weapon just like always.

76 Millett Designated Marksman Tactical Scope

The Designated Marksman Scope fills the requirements of the law-enforcement officer, rifle shooter, and the big-game hunter who needs a quick sighting system at ranges of five to 500 yards. The "Dot in a Donut" reticle allows for fast, natural aiming. The shooter's eye lines up the circle at close range, and the one-MOA dot gives accuracy at the longer ranges. Range estimation is straight forward by use of the circle out to

500 yards.
Compact design,
30mm tube and

bright illumination of the reticle are just a few of the many features of the DMS-1. Bright red illumination of the reticle adds to the quickness of the sighting system in day and low-light conditions. At one power it works well as a reflex sight and at longer ranges the four-X magnification gives increased accuracy.

K19-19458 \$249.95

Bushnell Trophy TRS-25 Ultra Compact Red Dot Sight

Bushnell's Trophy TRS-25 Ultra Compact Red Dot Sight is designed for use on shotguns, handguns and rifles. It is constructed and assembled by highly skilled craftsmen to Bushnell's high quality standards. The precision and craftsmanship with which this scope was built ensures its performance under demanding conditions. This scope will provide the shooting accuracy and repeatability which have made Bushnell legendary. Features unlimited eye relief and a three-minute of angle dot.

SCOUT SCOPE MOUNTS FOR AK, SKS RIFLES 77

Scout Scope Mounts provide an extremely stable optics base for your AK, Saiga or SKS rifle and will not shift, vibrate loose or change point of impact as the rifle heats up. Rock solid and easy to install, the two-piece design enables the removal and replacement of your optics without losing zero.

Scout Scope Mounts easily allow for complete DISASSEMBLY of your rifle for cleaning and maintenance while retaining zero. These rifles are designed so that carbon build-up can easily be cleaned from the gas tube and piston. This is routine maintenance, necessary in order to maintain a properly functioning rifle. Other mounts for AK-and SKS-style rifles make this difficult, time consuming and then require that optics be re-zeroed.

Scout Scope Mount for AK Rifle	K19-25374	\$72.95

90 Degree C-More Mount

You won't believe how much this will decrease your times from initial sight picture and target transition. You'll never lose your dot...and finding it has NEVER been easier! Turning your C-MORE

(Railway or Slide Ride) 90 degrees and eliminating the rail mount will lower your dot by as much as 1" to the bore of your pistol...and lower is just going to increase your speed. And when you do torque your pistol, you'll find the dot just that much easier. Designed by Bearcave Machining and offered by TACCOM, LLC.

How do you make a Savage rifle even more accurate? Well, as the adage goes, you can't kill what you can't see, so you include a Nikon 3-9x40 BDC reticle scope, mounted and bore sighted. This unique reticle can be ballistically matched to your exact cartridge using Nikon "Spot On" Software. Coincidentally, the price of the New package is "Spot On" too. See your favorite Savage dealer for details.
