

Crystal Touch Screen Shield Instructions

①

Use the wet wipe in the package to clean the camera's LCD screen, then use the microfiber cloth to dry it.

②

Peel the backing from the dust absorber. Affix it to the LCD for 10 seconds, then remove it. Now the LCD is clean.

③

Remove the mask marked 'BACK' from the Crystal Touch Screen Shield. Align the shield with the four corners of the camera's LCD. Gently press the center of the shield and watch as it automatically seals itself to the screen! If any air bubbles remain, simply press the shield gently in those areas to drive them out.

④

Use the included cleaning cloth to wipe away any smudges created during installation.

To ensure a perfect installation, please keep following tips in mind:

- Make sure the LCD is totally clean before installation to avoid air bubbles.
- Make sure the side with film marked 'BACK' is the side of the shield that attaches to the camera's LCD.
