General information

Service parts identification

The following information and procedure is used to identify the module group, item number, manufacture date, part number, and part name of the parts included in the .

The parts listed include all parts which may be used when performing either "Minor Repairs", "Major Repairs" or "Conversions" on the Variable Displacement Motor.

General information

Date code

The date code is defined as the year and week of manufacture. The same item number may list more than one part number. This indicates that there is more than one configuration for that item number. You will see that there are different date codes for the different part numbers. Find the date code of your unit from the nameplate to determine which service part number you need to order.

Example: The service part desired is item G30

Order Code	Item	Date Begin	Date End	Part Number	Part Name	Qty. per Model/Kit
80	G30	89-17		8000243	End cap gasket	1
	G30		89-16	8000151	End cap gasket (SB-1995-006)	1

All units using this order code with a date code prior to 89-17 must use part number "8000151." All units with a date code of 89-17 and newer must use part number "8000243."

About service bulletins

A Service Bulletin Number (SB-____-____) may follow the "Part Name" of the part you desire. You must read that Service Bulletin prior to ordering that part. The information contained in these Service Bulletins, as of the print date of this bulletin, are included at the end of this manual. Service Bulletins contain more detailed information such as interchangeability, what additional parts are involved, etc. It is suggested that you add additional Service Bulletins to this manual as you receive them.

Procedure to identify a part

The modular design of this product results in a simplified service parts list and part number identification procedure.

The same item numbers are used for same part names on all units within a product type. A part number that has another number following it in parentheses is done to make this a world wide manual.

Nameplate

Each unit will have a nameplate affixed to the housing. The nameplate of the Variable Displacement Motor will include the following information:

Model code

The Danfoss model code completely defines the specific unit and must be used when ordering parts to service this product.

Model/material number

The Danfoss model number (also known as material number) is used by the factory in manufacturing. On repeat orders, a complete unit can be ordered by the model number.

Serial number

The Danfoss serial number is used to identify the manufacture date and the unit sequence in the build. The serial number is also used to identify the units warranty time period.

The letter code indicates the location of original manufacture (assembly).

The first number (2 digits) indicates the year of manufacture. The second number (2 digits) indicates the calendar week of manufacture.

The third number (5 digits) is a sequential number used to identify a specific unit.

S51 160cc Control Electric 2-Position Y3-YB

(Y3 & Y8)

Diagram illustrating the assembly of the rear suspension components, showing the main assembly area and two callout boxes for specific sub-assemblies.

Main Assembly Area:

- M1Q1**: Main frame or chassis component.
- M1**: Central bracket or housing.
- M15**: Bolt used for the shock absorber assembly.
- QM034**: Shock absorber component.
- M18**: Multiple bolts used for mounting the central bracket.
- M16**: Bolt used for the lower shock absorber mounting.
- M150**: Bolt used for the lower shock absorber mounting.
- M151**: Bolt used for the lower shock absorber mounting.
- M321**: Shock absorber component.
- M16**: Bolt used for the lower shock absorber mounting.

Callout Box (Top):

- F32**: Coil spring.
- *F324**: Pin or clip used to secure the spring.
- *G420**: Top plate or bracket for the spring.

Callout Box (Left):

- M15**: Bolt used for the shock absorber assembly.
- QM034**: Shock absorber component.
- M1**: Central bracket or housing.

All Series 51 motors

Subject

End cap gasket change.

Description

Effective immediately, a new end cap gasket has been incorporated on all Series 51 motors. It is a direct replacement for the current gasket. The visible differences between the two gaskets are:

1. The new gasket is thicker. It measures .040" versus .030".
2. The new gasket has a red tint to the surface.

The new gasket is a stand alone gasket which should not be used with any sealing aid. The current torque values stay the same.

The new gaskets are now available and **MUST** be used in any repair or conversion.

Subject

Threshold adjustment screw

Service bulletin

Description

To improve the sensitivity of the threshold adjustment on Series 51 motors, the threads on the adjusting screw are being changed from standard pitch thread to fine pitch thread. The adjusting screw nut and lock nut will also change. At the same time, the bore diameter in the end of the adjusting screw and the pin diameter on the end of the spring seat will decrease.

The old style parts will be obsoleted and no longer available as service parts. A service kit containing the adjusting assembly and the spring seat has been created.

Piece parts are not interchangeable.

All noted parts must be replaced.

Subject

Change to balanced areas between end cap and valve segment.

Description

As part of the continuing Series 51 product improvement program, the balance lands on the end cap and valve segment have been changed. The valve segment now defines the balance. The contact surface of the end cap has been made larger while the contact surface of the valve segment has been reduced. The change was implemented in three steps:

1. Change the valve segment so it defines the balance between the valve segment and the end cap. This change was implemented May 1994.
2. Change the end cap to allow a larger contact surface to keep the load area constant. This change was implemented January 1995
3. Change the valve segment to allow a smaller contact surface and reduce the balance. This change was implemented February 1996.

Do not use a new end cap with an old valve segment. However a new valve segment will work with an old end cap. The new valve segment (3rd step) is marked with a drill point on the cylinder block interface side next to the outer drain hole.

The old end cap and valve segment part numbers are obsolete. They are no longer available as genuine service parts.

Change to stepped spindle in valve segment

Description

As part of the continuing Series 51 product improvement, the valve segment spindle design has been changed. The new design spindle has a step that stops against a recess in the valve segment. The new stepped spindle valve segment assembly replaces the valve segment assemblies with the straight spindle and the retained spindle.

The old segment valve assemblies will become obsolete. The stepped spindle valve segment assembly will be the standard for all models.

Subject

Incorporation of speed sensor into cartridge motors

Description

In order to incorporate a speed sensor into the Series 51 cartridge motors, some changes have been made to the main housing and bearing housing. These changes included: adding a boss to the side of the main housing for the speed sensor, changing from O-ring seals between housings to a gasket seal, shortening the distance ring to allow clearance for the speed sensor, and adding a retaining ring to locate the distance ring. These parts are non-interchangeable as both housings have changed. The old housings and distance ring are obsolete and no longer available as service parts. Refer to Service Bulletin SB-1998-021 for housing bolt torque and sequence.

Thread change at customer end of DIN shaft assemblies.

Description

As a product improvement, Sauer-Danfoss has changed the threaded hole at the customer end of DIN shaft assemblies to metric threads. Metric shaft assemblies will now have a metric threaded hole. To aid in identifying this change, new shaft assembly part numbers have been released. The new shaft assemblies are interchangeable with the previous shaft assemblies. The previous shaft assembly part numbers will become obsolete.

Incorporation of symmetrical rollers on the synchronizing shaft

Description

As a product improvement and to improve ease of assembly, Sauer-Danfoss has changed the design of the rollers used on the synchronizing shaft in Series 51 and 51-1 motors. The new rollers are symmetrical, in that they can be assembled either direction on the synchronizing shaft. The old rollers were asymmetrical and had to be assembled only one way. The synchronizing shaft has also been changed to accept the symmetrical rollers. The legs for the rollers are now longer in length.

A service kit is available to replace the old design synchronizing shaft and rollers, which are obsolete and no longer available as service parts. The pins at each end of the synchronizing shaft are still the same parts.

Sealing change to end cap/control interface

Description

The sealing is improved between the end cap and controls or multi-function blocks on all Series 51 and 51-1 motors. This change replaces individual O-rings with a gasket that incorporates imbedded rubber seal rings.. The O-ring spot faces are removed from the end cap mounting face. There is no change to controls' and multi-function blocks' sealing surface.

New end cap part numbers allow better control of this change. Old end cap part numbers are obsolete. You cannot use the new gasket with old end caps and you cannot use the O-rings with new end caps. Control and multi-function block kit now include the O-rings and the new gasket.

Subject

Redesign of bearing housing

Description

In an effort to standardize the assembly of bent axis motors, the cartridge bearing housing for the series 51 motors has been changed. The new design uses two special plugs to retain the shaft assembly in the housing rather than a spacer ring and retaining ring. The shaft seal hardware has also changed. The new seal design has the lip seal pressed directly into the housing and held in place with a single retaining ring. The old seal design had an O-ring on a seal carrier assembly with two retaining rings holding the seal carrier in place. The lip seal does not change. The new housing will have improved clearances for use in

New shaft lip seal

Description

As a product improvement, Sauer-Danfoss is changing the shaft lip seal in the series 51; 110, 160, & 250 cc motors and in the series 51-1; 110 cc motors. The new seal requires a change to the mounting flange seal bore in SAE & DIN flange options, and the seal carrier used in cartridge motors. The seal carrier assembly part number does not change and is interchangeable with previously built cartridge motors.

The old mounting flange and seal carrier will become obsolete and no longer available. The old lip seal will remain available for service.
