GE Healthcare's New Medical Device Integration Solution

Mural™ Connect captures and harmonizes bedside medical device data providing a complete patient picture to enable digital documentation, clinical decision support and analytics.

Platform:

Complete the patient picture through dynamically associating data from multiple devices to patient electronic medical records.

CLINICAL

Standardize IHE data feeds for seamless consumption by conforming clinical information systems

OPERATIONAL

Save time spent manually entering information.

FINANCIAL

As clinical teams continue to elevate quality of patient care they seek richer clinical information that is scattered across multiple medical devices generating unstandardized data parameters. Varying data formats between medical device manufacturers make it difficult to correlate parameter data between medical devices, units, hospitals, and patients.

GE Healthcare understands that digitizing care areas presents unique challenges due to the lack of interoperability between devices and systems. Your teams struggle to connect data for a comprehensive patient view because unstandardized data is spread across medical devices from multiple manufacturers.

That is why we designed Mural™ Connect to help build a more complete patient picture and enable precision care by delivering standardized IHE data correlated according to clinical practice, alerting, and documentation needs.

Mural™ Connect captures bedside medical device data for digital documentation and analytics. It integrates medical device data from multiple disparate vendors in a standard format for information systems. As a result, clinicians will have a comprehensive view of patient data across departments to enable care collaboration.
