Lenexa, Kansas

Welcome to Fantech

This year we launch a new era of the Fantech product catalog. Redesigned and rethought, the printed book you hold in your hands along with future marketing materials are moving in a new direction inspired by our vision to become your best friend in HVAC. In that spirit, this edition is dedicated to finding unique solutions to help make your work shine.

This edition is focused on product applications and how our products can be a win-win solution to various challenges that you face in your day-to-day work. On pages to follow, we packaged core products with accessories that allow you to complete your job all in one go.

Included in this catalog are more application renderings than ever before. Visualization of our products in action has helped our customers see the versatility and value in using Fantech equipment in a variety of applications to increase Indoor Air Quality. This catalog is designed to help you see your job with a different set of eyes. After all, Fantech's most important eyes on a project are yours.

Inline Fans

1

Inline fans were a revolution in the industry after their initial inception in 1980s. Contractors fell in love with the versatility and application of these fans in the years that followed.

A recent innovation now allowing inline fans to be equipped with EC motors means you have more flexibility than ever with true variable speed control and energy efficiency to meet demand in the 21st century.

Go Green with EC: Energy Efficient 21st Century Super Fans

The average person spends 90% of their time indoors – a trend that makes demand for energy-efficient climate control, ventilation, and air quality even more imperative.

Electronically Commutated (EC) motors are the pinnacle of controllable fan technology.

Look for the mark.

The “Green Ventilation” symbol indicates that Fantech’s products deliver high energy efficiency and are designed to accommodate a variety of demand control applications. To customers, this symbol represents an assurance of sustainability, economy and easy installation.

FKD 16XL EC

FG 8EC

FG 4XL EC

prioAIR® 8EC

HERO 150-H EC

It's simple.
It's inline.
It's much more.

Over the years, the inline fan has become an icon of the ultimate union of shape and function. Its performance suits almost any need, but a long life span is what truly makes it a must-have piece.

Do you see any rivets on these fans?
Neither do we.
That's why they never leak.

The Classic inline fan

FG Series is designed for installation in circular ducts for variety of applications: from simple fresh air intake into residential dwellings to exhaust of stale air from basements and crawlspaces.

Airflow ranges between 110 and 950 cfm.
Galvanized steel housing. 100% speed controllable.
Speed controller sold separately.

FG 4 20W, 135 cfm 7 lbs	FG 4XL 72W, 170 cfm 8 lbs	FG 5XL 73W, 220 cfm 8 lbs
FG 6 67W, 303 cfm 10 lbs	FG 6M 120W, 418 cfm 12 lbs	FG 6XL 153W, 483 cfm 12 lbs
FG 8 120W, 461 cfm 12 lbs	FG 8XL 142W, 502 cfm 13 lbs	FG 10 140W, 513 cfm 12 lbs

See page 136 for full product specifications.

Pair with controls and accessories

FG.. EC Series offers same features as classic FG fans come standard equipped with a built-in potentiometer for "set-it and forget it" speed control. They are ideal for standard duct boosting where balancing the flow is critical.

	FG 4XL EC 32W, 180 cfm 5 lbs	FG 6M EC 75W, 363 cfm 9 lbs	FG 8 EC 69W, 428 cfm 9 lbs
	FG 10 EC 87W, 513 cfm 9 lbs	FG 12 EC 120W, 633 cfm 12 lbs	FG 12XL EC 162W, 805 cfm 16 lbs

See page 137 for full product specifications.

Using this fan for exhaust?
Pair it with these accessories:

We all know that rivets in fan housings leak air. Our manufacturing process guarantees that rivets aren't necessary and ensures an air-tight seal. As a result, stale air leaves your home, not the fan.

You want power? You got it!

The American MUSCLE Fan

FKD Series is designed for installation in circular ducts for applications where high airflows and quiet performance are needed: residential kitchen exhaust, supply/exhaust in institutional buildings such as offices, hospitals, beauty salons, veterinary clinics.

Airflow ranges between 675 and 6,271 cfm. Galvanized steel housing. Controllable with an external speed control between 60 and 100%.

FKD 8 XL 327W, 836 cfm 15 lbs	FKD 10 325W, 910 cfm 14 lbs	FKD 10XL 506W, 1266 cfm 21 lbs

FR Series
Inline Fans

Whatever-You-Want Fan

The **FR Series** was originally designed to exhaust air from a beauty salon hair drying chairs. Time has passed and it has became an icon for many installers across the country: for crawlspace venting, multiple point exhaust, makeup air supply, or simply as a booster fan. It's a truly versatile product.

Airflow ranges between 100 and 345 cfm.
Plastic vibration welded single piece housing. Controllable with an external speed control between 60 and 100%.

Keep the summer heat outside.

Raise your hand if you’ve experienced a heat buildup in the attic space in summer time. High temperatures inside your attic shorten the life span of roof shingles. Excessive heat deteriorates items you store in the attic and can cause moisture problems in your house. That’s why we offer a simple solution to keep attics ventilated on demand.

RE(C) Series is an exhaust direct-drive ventilator for roof installation. Comes in two versions, with a flat base for direct flushing to the roof (RE version) and with a flanged base for curb mounting (REC version). Airflow ranges between 100 and 1,000 cfm.

CVS Series MULTI-PORT of Entry

A multi-port exhaust fan works the best for home spas or two separate bathrooms because you can address exhaust in the areas where it's needed the most: the steam shower, toilet and, of course, your Jacuzzi tub.

CVS Series is an exhaust air fan for areas where space is limited. They are also a popular choice for use between floors in apartment buildings. Airflows between 250 and 400 cfm.

CVS 275A 90W, 245 cfm 11 lbs	CVS 300A 120W, 355 cfm 16 lbs	CVS 400A 150W, 404 cfm 20 lbs

Keep the air moving when your car is in park

Your garage is a home to a plethora of smells and liquids that you use all over your house. Not all of these smells are harmless though.

Attached garage air quality matters because the space’s two main purposes are for parking emission-releasing vehicles and storing items that can include hazardous materials. Your attached garage is attached to your house; it naturally has an impact on the rest of your home’s air quality and safety.

A mechanical exhaust solution will keep dangerous volatile organic compounds (VOC) and chemical fumes from making it into your home.

Have a 3 or 4 Car Garage?
Consider adding a few more MGE Exhaust grilles and using a higher rated RVF 4XL to properly ventilate your garage.

RSK Backdraft Damper
Anytime you have an exit for airflow be sure to cover your tracks with a backdraft damper. It keeps air from blowing back into the space when the fan is turned off.

This Mocha was brought to you by Fantech

This café needs fresh air in its powder rooms so customers aren't distracted by smells other than their freshly ground coffee. In a configurable commercial environment you also need flexibility.

A Fantech remote Bathroom Fan allows a contractor to centrally mount a fan while taking care of multiple inlets at once. But what's more, if your client calls you back to move or add an additional bathroom, you can easily move the inlets without hassling with extra electrical or the purchase of additional expensive hardware.

Buy This Package

It’s an attic, not a sauna.

Your attic space acts as a thermal buffer between your house and the outdoors. During much of the year, the ventilation in your attic automatically regulates itself thanks to natural differences in pressure. But in the hot climates or during the summertime it is possible for these pressures to even out and create stagnate air.

INLINE doesn't mean **INSIDE**

Here is a creative example of how an exterior mount fan can be used in place of an inline fan. A public park or campground with washrooms still needs its air taken care of. The added benefit of an exterior mount fan is that you don't need to crawl into an attic space in the small, unconditioned washroom you are working in. Keep the installation simple by working from the outside!

Radon Mitigation

2

From introducing the first inline radon fan to the U.S. in 1983 to developing the first Pressure Field Extension Diagnostic Kit (PFEDK) in 2018, Fantech’s history is marked with iconic industry firsts. For over 40 years, we have been committed to providing high quality products that not only save lives, but make yours just a little bit easier. Now, we are proud to share our simplified line of radon-specific fan systems and present two new products that aim to innovate and improve the installation process.

Welcome to the Family

Our straight and narrow family selection makes your job easy

Fantech has proudly led the industry with our quality inline fans for decades on end. But when we discovered our fans were a key component in radon mitigation we decided to take it up a notch. The result was a new family of fans designed specifically for the fight against radon.

In recent history we've taken another large step in improving our products by simplifying our product line for painless and accurate selection.

Rn1
Low Suction, Low Airflow

The Rn1 is specifically designed for applications where lower pressure and flow are needed. With a record low power consumption of less than 20W, this ENERGY STAR® fan is the perfect choice where there is good sub slab communication and lower Radon levels.

Rn2
Low Suction, Medium Airflow

Ideally tailored and balanced performance curve for a vast majority of your mitigations. A great solution for the bulk of your projects.

Rn3
Medium Suction, High Airflow

The Rn3 model is an excellent choice for systems with elevated radon levels, poor communication, multiple suction points and/or large sub slab footprint.

 **Rn4EC**
High Suction, High Airflow

Our Rn4EC radon fan system is specifically designed for mitigation systems requiring high suction air performance, with the built-in flexibility to provide greater air flow rates at lower suction pressures as well. No more choosing either high flow or high suction, this fan can do either one!

Rn1	Rn2	Rn3	Rn4EC
165 cfm max	165 cfm max	375 cfm max	555 cfm max
0.9 in.wg. max	1.95 in.wg. max	2.35 in.wg. max	4.4 in.wg. max
4 lbs	5 lbs	6 lbs	7 lbs

Our line. Simplified.

Leading the way in radon fan technology

Old Radon Fan Curves

New Rn Fan Curves

Rn2EC
Low Suction, Medium Airflow

The Rn2EC is equipped to handle anything its AC-equipped sibling can. But the Rn2EC can also be precisely dialed at specific performance points thanks to its EC motor; saving energy all year long.

Rn2SL
Low Suction, Medium Airflow

Our Rn2SL is engineered specifically for the demands of radon mitigation applications with aesthetics in mind. This exterior-mounted fan features a sleek, neutral-colored housing that is less contrasting to the appearance of many homes' exteriors.

Don't settle for plumbers' leftovers.
LDVI® couplings are purpose-built for Radon installs.

LDVI® Bulk Packs
Radon Specific Couplings

Complete your Radon system with a pair of Fantech's new LDVI® (Low Durometer Vibration Isolating) couplings. Designed specifically for radon mitigation applications, our patented LDVI couplings are molded with a softer, more flexible (low durometer) material as compared to standard plumbing couplings, making installation easier, while providing superior vibration isolation.

LDVI couplings are designed to work with both 3" and 4" PVC pipe connections and can be used to enhance the performance of ANY radon fan on the market.

Confidence Comes in a Yellow Case

Impress homeowners with a PFE Diagnostic Kit while simultaneously getting the tools you need to get readings more accurate than ever before. No more shop-vac mitigation. Fantech has made a tool that simplifies taking an accurate reading from under the slab and recommends the correct fan solution in minutes thanks to a convenient app on your phone.

Let Radon take the high road.

Radon simply loves a great escape. While radon is a dangerous gas when left unattended, it actually doesn't want to be in your home at all.

A mitigation system simply creates a more appealing route for your unwanted guest to evacuate. The science is simple!

Is your home radioactive?

Radon is an invisible, radioactive gas that has a tendency to build up under the foundation of your home. Unfortunately, being exposed to this radioactive isotope won't give you superpowers. Learn how Fantech can keep your home safe with the utmost accuracy with their industry-leading technology.

Rn4EC
High Flow and Suction

It may seem too good to be true, but you really can mitigate radon gas with one simple fan installation!

Fresh Air Appliances (HRV/ERV)

What if a simple ASD system isn't the answer

Radon levels in certain regions or building styles can be hard to mitigate with a traditional Active Soil Depressurization (ASD) system.

A Fantech HRV or ERV can be an effective way to reduce radon levels, by providing slightly pressurized ventilation to the space while introducing fresh air and diluting the air inside the structure. In most cases, this reduces radon levels and raises overall Indoor Air Quality (IAQ).

How Fresh Air Appliance can dilute radon levels in your home.

- 1. Exhaust the radon contaminated air as close to the floor as possible. (Radon is 8x heavier than air)
- 2. Bring in fresh, outside air to dilute the air inside thus lowering radon levels.
- 3. Locate these grilles at opposite ends of space to create a cross ventilation strategy of dilution.
- 4. Slightly over balance the Supply Air side to achieve positive pressure in the space. (Positive pressure assists in keeping radon from seeping into the home)

Bathrooms

3

Designing a bath involves many decisions that will ultimately affect its look and function, whether it be a busy family bathroom or a small guest bath with limited space. Or, maybe, you're going all out for that ultra-modern bath retreat with all the amenities.

No matter what style bath you're designing, one thing remains the same - the need for proper ventilation.

And who better to offer you the perfect ventilation solution than Fantech? For more than two decades our quiet ventilating fans have protected bathrooms from the damaging effects of mold and mildew without disturbing your peace and quiet.

Why choose a remote mounted bath fan?

It is a common misconception that **multiple** bath fans have to be purchased for **every** bathroom in your home. It is also a misconception that bath fans have to be **loud** and **annoying**. But Fantech has a better solution to both of these problems in one convenient package.

Did You Know Fantech Remote Bath Fans...

- ...can be linked to up to **three*** remote locations?
- ...can be paired with **automatic** humidity sensors and timers?
- ...have premium **designer** grille options?

*number of locations depends on model selected

PB Series

Premium Bath Fans • Single Grilles

Clear the air in smaller
baths and powder rooms

A small-scale grille mounts in the ceiling while the fan motor mounts in a remote location away from the living area. The result is a quiet yet powerful combination designed to help protect your home from the damaging effects of humidity. PB fans are designed for intermittent or continuous operation to meet ASHRAE Standard 62.2.

PB 110L10 Premium Bath Fan
with a Dimmable 10W LED Light/Grille

Accessories for Single Grille PB Series

PB Series

Premium Bath Fans • Dual Grilles

The key for clean oversized
baths is spot ventilation

Dual grille Premium Bath fans can effectively ventilate two areas of the bath or two different bathrooms. Small 7" ceiling grilles (with or without lights) can be easily positioned directly over showers, whirlpool tubs, steam showers, toilet or vanity. The fan motor is installed away from the living area for super quiet operation. PB fans are designed for intermittent or continuous operation to meet ASHRAE Standard 62.2.

PB 270L10-2 Premium Bath Fan
with Two 10W Dimmable LED Lights/
Ceiling Grilles

PB 270-2 (PB 370-2) Premium Bath Fan
with Two Ceiling Grilles

Accessories for Dual Grille PB Series

Grilles! Grilles! Grilles!

Fantech offers many grille designs for your unique wants and styles. Take a look at our accessories for more. These can be used in any appropriately sized duct opening.

The Math is Simple

There are a few simple ways to calculate the necessary CFM of your bathroom. There are two ways to think about; **Less than 100 sq ft** and **Greater than 100 sq ft**.

Less than 100 sq ft

For these situations, simply multiply the length and width of a bathroom to learn the required CFM.

Greater than 100 sq ft

For these situations, simply add 50CFM for each shower, toilet, steam shower, or tub. Whirlpool or garden tubs are 100CFM.

Full Bath

10' x 7' = 70 sq ft (<100) = **70 CFM**

Double Bath

For a double bath you simply add the CFM requirements of two bathrooms and add them together.

9' x 13' = 117 sq ft (>100 sq ft)
1 toilet + 1 tub = **100 CFM**

7' x 8' = 56 sq ft (<100 sq ft) = **56 CFM**

Add results from both.
100 + 56 = **156 CFM**

1/2 Bath

6' x 6' = 36 sq ft (<100) = **36 CFM**

Home Spa

16' x 11' = 176 sq ft (>100)

50 toilet + 50 shower + 100 garden = **200 CFM**

The Last Question: Remote Fan or Ceiling Mount Fan?

Another simple tool, this cost benefit table, will help you decide if its more economic to buy a remote bath fan capable of doing multiple bathrooms at once or a single, ceiling mount bath fan for each bathroom.

Equipment / Labor	Comparable 110CFM Ceiling Mount Fan*				Premium Bath Fan by Fantech

PRO™ Series

Built with the Pro in mind

Efficiency, quiet operation and ease of installation characterize both the PRO™ and PRO™PLUS series. Both fans are certified to the rigorous California Title 24 building energy code, as well as ETL/c-ETL, HVI, and ENERGY STAR® standards. The PRO™ Series operates at just 2.0 sones while the PRO PLUS™ is barely audible at 0.3 sones. Installation is fast and easy thanks to an adjustable mounting bracket that requires fewer screws than other brands.

Dryer Exhaust Fans for Residential Laundries

4

It used to make perfect sense to put a dryer on the outward facing wall of your house. But then homeowners got wise and wanted them closer to the bedrooms, where the dirty clothes are.

While a dryer fan is rated well enough to exhaust lint through a shorter duct length, the homeowner's tastes have changed. Let Fantech help you extend the viable duct length of over 100 feet with our inline and externally mounted solutions.

For over 5 years, the DEDPV-705 has continued to uphold the standards needed to meet and exceed the listed UL705 standard.

The UL testing standards for DEDPV’s help ensure that dryer exhaust fans can safely and effectively assist the ventilation of a residential capacity dryer. The standard’s tests prove functionality of required safety features, provisions for maintenance, proper air velocities for lint management, etc. UL’s DEDPV standard has established a baseline for dryer exhaust fans. Authorities now require UL Listed DEDPVs for installations in their communities. Architects and engineers can also specify UL Listed DEDPVs for their projects, knowing that the safety of these installations is backed by a globally-recognized, independent testing and standards company.

DEDPVs are most notably differentiated from other dryer exhaust fans by these features:

DEDPV fan housings is metal, not plastic as some products available on the market. A DEDPV shuts down in the event of a dryer fire, so as not to facilitate the spread of fire in the home.

A DEDPV automatically energizes when the dryer is operated.

A DEDPV indicates proper fan operation to the dryer operator as well as notifying the dryer operator in the event of a fan failure.

Premium Features Galore

More than what’s in the box

What you see isn't always what you get. In our case, you get more! In addition to outstanding accessories and features, our products are certified by one or more of the HVI, ETL and UL ratings. That means you're getting a promise that is backed by something that's more than a stamp on the box.

When is a dryer exhaust necessary?

According to some dryer installation instructions and local building codes, DEDPV-705 should be added in the dryer duct run when the length of duct exceeds 25 feet with no bends, 20 feet with one bend or 15 feet with 2 bends. With an existing system you may find that drying times are far longer than the dryer manufacturers instructions give, this may indicate that you have a duct run longer and more restrictive than your dryer can handle. Installing a Fantech DEDPV-705 in the duct line will relieve the excess pressure in the duct allowing the dryer to operate as designed, and dries your clothes faster.

DEDPV-705

Dryer Exhaust Duct Power Ventilator

DEDPV-705 is a dryer exhaust duct power ventilator. It helps your dryer run efficiently while removing the warm and moist air from the dryer duct. The product complies with the UL standard to the DEDPV supplement to UL705.

- Pressure switch automatically activates the exhaust fan once the dryer is on;
- Temperature limit switch turns the fan off in case of a fire
- The wall-mounted indicator panel to indicate operation
- Four mounting clamps and two clean-outs ease installation and service
- 5-foot cord with a plug for 120V/1~ power supply
- For high altitude applications, use 46006, DEDPV-705 High Alt Dryer Exhaust Fan

DEDPV-705

DBF Series
Duct Booster Fans

The Fantech dryer exhaust fans have been specially designed to solve the problems caused by long duct runs on clothes dryers. According to dryer manufacturers and some local building codes, duct booster fans should be added in the dryer duct run when the length of the duct exceeds 25 feet with no bends, 20 feet with one bend or 15 feet with two bends.

When the dryer is on, Fantech's patented pressure sensing switch automatically turns the exhaust fan on. The warm, moist air in the dryer duct is exhausted out of the building quickly. The dryer exhaust fan monitors the status of the dryer and will turn itself off when the dryer stops. A wall-mounted indicator panel (specific models) with LED display lets homeowners know that the fan is fully operational.

space is tight.

RVF 4XL & DB 10 Pressure Switch
Exterior-Mount Fan for Duct Boosting

If your laundry room is hard to reach or you don't have room for a traditional dryer fan, the RVF 4XL is your solution. Fantech's popular exterior-mount exhaust fan with white, powdercoated metal housing can be used for dryer exhausting when paired with the accessory DB10 pressure switch (purchased separately). The switch is required for use with fan model RVF 4XL when used in a dryer exhaust application.

DB 10 Pressure Switch
Within 10 seconds of your dryer being ran, our dedicated, automatic sensor will turn the dryer exhaust fan on. This ensures the fan will be ran as long as the dryer is on plus an extra 10 minutes to ensure the heat and moisture escape the duct run.

? How do I calculate my duct run?
To calculate the length of your planned duct run, measure from the dryer to the external venting point in the roof or wall. For each bend or elbow add 85 feet to your total duct run calculations (or as required by local codes).

Only **YOU** can prevent dryer fires

Even though you probably clean the screen in your dryer out after every use, lint still manages to work its way out and builds up in the ductwork. It is highly flammable and the most likely culprit in a fire started by your dryer. While regular maintenance is still vital for a healthy length of duct, Fantech's dryer exhaust fans are designed to give an extra kick to the warm, moist air and lint trapped in the duct.

Calculate Your Duct Runs*

The DEDPV-705 fan is rated up to **130 feet** in duct length for dryer applications. In general, duct runs frequently exceed the 25 equivalent feet that many dryer manufacturers set as a standard maximum length. For every 90 degree elbow, add 5 additional feet of duct length and for 45 degree elbow add 2.5 feet. The paragraph below illustrates how the duct length can be calculated.

For example: If a 4" duct connection from a dryer to the roof vent is **65 linear feet** with **two** 90 degree elbows, then the total duct run is **75 feet**. As stated above, for every 90 degree elbow, 5 feet must be added to the total duct length. Fantech is well equipped to use a Dryer Exhaust Duct Power Ventilator meeting UL-705 Standard for this application.

Underwriters Laboratories (UL) has developed a supplement to UL705 specifically for fans used for dryer exhaust and has given these fans a the name:

**Dryer Exhaust Duct
Power Ventilator (DEDPV).**

*Example written based on residential code sited at <https://codes.iccsafe.org/content/IRC2018/chapter-15-exhaust-systems>

Calculate Your Duct Runs*

The RVF 4XL fan is rated up to **110 feet** in duct length for dryer applications. In general, duct runs frequently exceed the 25 equivalent feet that many dryer manufacturers set as a standard maximum length. For every 90 degree elbow, add 5 additional feet of duct length and for 45 degree elbow add 2.5 feet. The paragraph below illustrates how the duct length can be calculated.

For example: If a 4" duct connection from a dryer to the roof vent is **53 linear feet** with **two** 90 degree elbows, then the total duct run is **63 feet**. As stated above, for every 90 degree elbow, 5 feet must be added to the total duct length. Fantech is well equipped to use an RVF 4XL for this application.

Its time to go outside.

Not every home is capable of installing a traditional inline dryer exhaust fan. Maybe the pitch of your roof is too shallow or a tricky remodel moved the laundry away from the adjoining living room so they could actually hear the television. If you've got a laundry room in a space that needs something different, you can take the fight outside with the RVF 4XL. Adding the required DB10 Automatic Pressure Switch lets you set it and forget it!

Fresh Air Appliances for Single and Multi-Family Homes

5

Thanks to space-age technology, your home can keep inside in and outside out more efficiently than ever before. But locking the fresh air out is a bad idea.

A fresh air appliance by Fantech will allow you to bring it all in without sacrificing the energy your home worked so hard to produce.

Fresh air doesn't come in a can...

Your house is a lot like this can: Sealed tight.

But unlike this can, your home isn't full of fresh air. Rather, the air in your home has a tendency to recirculate without exhausting contaminants. A Fresh Air Appliance from Fantech adds pure, fresh air all year long.

How exactly does a Fresh Air Appliance work?

We cross the streams!

It's a simple process of exchanging energy from the unwanted, stale air with the clean, fresh air from outdoors.

Turn the page for details about our newest installment of the Fantech family.

Does your basement have **that** smell?

Basements tend to hold moisture and stale air particulates to create that signature smell. A fresh air appliance can introduce fresh air while also exporting undesirable smelly particles. Some solutions suggest simply removing air with an exhaust fan, but that would create a negative pressure that isn't optimal for air quality in your basement. With a Fresh Air Appliance, your home can keep the good air inside while kicking the bad air to the curb.

Filtration

7

You filter your water and wash your food because you understand the importance of purity in something so important to your day to day wellness. You can live 2-3 days without water, but you can only live a few minutes without air. Shouldn't we treat air with even more respect?

Pet dander and other allergens are no match for a whole house filtration system by Fantech.

Even if you're constantly introducing fresh air into your home, there are still unwanted particles of dander, dust, and pollen that can be treated. A HEPA grade solution is the best way to address common household contaminants.

Product dimesions available online at fantech.net

CM3000: Used in geographical locations where the product unit can be installed in a conditioned space such as a basement, closet or heated crawl space.

CM3000I: Used in southern U.S. states where it's common to locate HVAC equipment in an unconditioned space such as a garage or attic. Insulation prevents condensation problems.

CM models come with four collars, two pieces of UL Listed 8" flex duct and hanging chains.

Both CM3000 models can work of this 7-day programmable timer on demand.

Worried a filter might bog down your HVAC? Don't be!

Fantech's CM/DM Series filter boxes are equipped with a 240 CFM motor that ensures your HVAC isn't being asked to take on an extra load it can't handle.

DM3000P: Includes a differential pressure switch. The unit will remain OFF until the pressure switch detects airflow in the forced air system's duct. As airflow is detected, the DM3000P is turned ON. Optionally, the CM 3000 and CM 3000I version can operate continuously regardless of the forced air system's operation.

Beware of the Air!

Fantech’s solution for the most valuable particle in your home.

Air is precious and easily contaminated by the everyday chemicals we use to cook, clean, and play in our homes. Let Fantech relieve some of the pressure with a HEPA filters scrub 99.9% of particles that pass through it! A variety of form factors and insulated options really leave you with no excuse not to install one of these affordable, whole-home filter options.

Consider the space when you are installing a filter box.
Not every HVAC system is equally accessible and that’s why
Fantech offers a variety of mounting options to ensure you have
the best possible installation.

Kitchens

The magic really happens in the kitchen. This is where Grandma bakes her cookies, where Mom makes her lasagna, and where Timmy chows down with his soccer pals after practice. More and more, modern homes are turning their focus to the kitchen for entertainment rather than their flat screens.

Fantech offers a variety of solutions to help you create a quieter, healthier kitchen experience to be remembered for years to come.

True Makeup Air System for a Single Family Home

Ducted Components

Why do I need an active makeup air system for my kitchen?

Every time an exhaust fan removes air from your house, an equal volume of air must enter. The air that enters cracks in a home’s envelope to replace air that is exhausted is called makeup air. Two existing building practices affecting makeup air are causing increasing problems for homeowners: homes are getting tighter, and trendy multiple burner stoves require more powerful range hoods to exhaust heat and moisture.

So where does a powerful range-hood get its makeup air? If the house doesn’t have enough random air leaks around windows, doors, and mudsills, the makeup air is often pulled backwards through water-heater flues or down wood-burning chimneys — a phenomenon called backdrafting. Since the flue gases of some combustion appliances can include carbon monoxide, backdrafting is dangerous. In some cases, it can be life-threatening.

In newly engineered homes with range hoods over 400 CFM, there is a new code dictating air replenishment. Although this code has been on the books since 2009, inspectors are now enforcing it.

- Residential kitchen hood liners for use with remote-located exhaust fans
- Sturdy, galvanized steel structure with elegant stainless steel fascia
- Stainless steel baffle filters can be easily removed for cleaning

Makeup Air System (MUAS)

Why do we need makeup air?

In a nutshell - we would otherwise have problems. Today's homes are built to be more energy-efficient. "Tighter" construction resists the infiltration of outdoor air through the home's exterior, which limits the amount of makeup air the home will permit.

Of course, you can only exhaust out from the home as much air as is able to come back in. Without makeup air, even a powerful exhaust fan can only remove as much air from the home as is permitted via infiltration.

When an exhaust fan operates without sufficient makeup air, some undesirable results can occur:

The exhaust system will not work to its intended capacity

Kitchen hood exhaust systems are sized to remove cooking-generated heat, odors and contaminants based on the cooking equipment's dimensions and heat rating. Inadequate makeup air can prevent a kitchen hood exhaust system from adequately removing contaminants.

Backdrafting of chimneys and appliance vents

Insufficient makeup air will result in depressurization in the home. Depressurization works to halt the flow of hearth and appliance combustion products from exiting the home. This "backdrafting" can result in a dangerous accumulation of harmful gases in the home. Studies by the Building Performance Institute (BPI) and Residential Energy Services Network (RESNET) have shown that as little as 5 Pa (0.02" w.g.) depressurization can cause backdrafting.

Non-compliance with the US and Canadian building codes

In the U.S., the construction industry has long recognized the need for adequate makeup air for exhaust systems. Beginning in 2009 and in every version since, the International Residential Code (IRC) has required that makeup air be provided for kitchen hood exhaust systems with capacity of 400 cfm or greater.

Canada's National Building Code has a section entitled, Protection Against Depressurization. Essentially, any exhaust device operating at a higher airflow rate than the normal operating exhaust capacity for the dwelling shall have provision for make-up air.

White paper available

SPECIFIERS: Visit our website at fantech.net to view our Independent Engineering White Paper, Residential Exhaust Makeup Air: Explanations and Solutions, which explains why active makeup air is the only proper solution for your customers.

The Working Functions Of A MUAS

Here is a graphic look at how air moves through a Make Up Air System.

Fantech Makeup Air Controller (FMAC)

The patented FMAC is the brains of the makeup air system. While the compensated exhaust system is operating, the makeup air fan supplies air at a rate necessary to maintain the desired building pressure scheme as set up by the installer. The makeup air flow rate automatically and infinitely varies proportionally with the speed at which the exhaust is operated by the homeowner. A neutral (balanced) pressure scheme is common, but the installer can also employ a slightly positive or negative pressure scheme should he desire.

The FMAC includes a current transducer, system controller, transformer, and a NEMA electrical enclosure.

You could always open a window...

It's true that if you have a large enough opening, air will naturally let itself back in. But that isn't ideal for 12 months a year.

Fantech Makeup Air System advantages at glance:

- Automatic, infinitely modulating air flow in proportion to the exhaust
- Particulate matter is filtered from the outdoor air before it is delivered to the home
- Since it is fan-forced, makeup air can be ducted to where it can be most suitably delivered to the home
- Cold outdoor air can be tempered with optional MUAH heater kits
- MUAS can be set up by the installer for a variety of pressure schemes:
 - slightly negative, slightly positive, or balanced
- MUAS provides the EXACT amount of air needed - no more, no less
- Complies with the building code

Hood Liner • HL Series

HL Series Hood Liners are compatible with most custom cabinet hood designs (as depicted in the cover photo of this brochure). HL Series hood liners feature an attractive stainless steel fascia supported by a sturdy, galvanized steel housing. Once surrounded by a hood, only the stainless steel fascia and baffle filters are visible. The stainless steel baffle filters are easily removed for cleaning. The liners feature high quality machined aluminum knobs for lighting and fan controls. The dimmable halogen lights illuminate the cooking area with a spectrum of light that meets the expectations of even the most discriminating chefs.

Silencers LD for circular ducts are fitted with a gasket collar and are compatible with most hard duct. Verify fit and use transitions as necessary.

LD 8 LD 10 LD 12 LD 14

What is the purpose of a silencer and when do I need to use one?
The Fantech LD silencer reduces the "perceived" noise of a kitchen ventilation system by 50-60%. This is particularly important when the airflow rate is generally high (300+ cfm).

Your kitchen might be choking under the pressure

Does cooking a good meal take your breath away? Maybe it's not the steak, maybe it's your kitchen exhaust expelling all the good smells out of the kitchen.

Fantech's makeup air system automatically replenishes lost air as needed to ensure your kitchen is happy and full even when the master chef is busy at work.

Does a loud range hood keep you from using your indoor voice?

Does your kitchen require less than 400 CFM? Smaller kitchens don't require a monolith of power to evacuate air on a regular basis. If this is the case for your multi-family or single-family project, consider a Fantech, remote mount kitchen exhaust solution.

A remote fan allows you to have a much quieter kitchen environment when you're running the range hood. In homes where entertaining in the kitchen is becoming more common place, this feature is sure to help keep your voice at an appropriate level all night long.

FLD 60
Bathroom Light/Fan Switch
Designed as a replacement for the bathroom fan and light switch. By using a microprocessor to monitor and control fan operation, a precise amount of ventilation can be provided. Allows continuous operation of the fan for up to 1 hour after light switch is turned off.
FLD 60
115 V
1 lbs

FTD7
7 Day Digital Timer
7-day timer incorporates a LCD (liquid crystal display) which accurately displays the time of day in an AM/PM format. There are 8 possible “on/off” combinations that can be programmed. For security purposes, the timer has an additional feature that allows for a random variation of 2 to 32 minutes for each “on” and “off” time from the actual time programmed.

Switches and Controls for Ventilation

Controls for Heat and Energy Recovery Ventilators

EDF7
Electronic Multifunction Dehumidistat
An electronic multifunction dehumidistat that is compatible with all Fantech’s HRV/ERV (except SH/VH 704). This control has 3 possible modes of operations: Ventilation mode, Recirculation mode and Standby.
Dimensions 3 5/8" (w) x 4 7/8" (h) x 7/8" (d). In AUTO Mode, the EDF7 will activate normal speed ventilation when the indoor relative humidity is above the desired set point. During summer, the AUTO Mode can be deactivated to lower energy consumption. Shipping Class 1.

EDF7
1 lbs

- Desired relative humidity set point
- User selected speed: Low, Medium, Normal and 20 min/hr
- LCD Backlit screen
- Summer mode allows user to deactivate dehumidistat
- Indoor relative humidity is displayed
- No battery to replace

MDEH1
Low Voltage Dehumidistat
2-wire low voltage dehumidistat control with rotary dial. Just turn the dial to set the humidity level. Multiple units can be used with Fantech fresh air appliances. Install in bathrooms, kitchen or laundry for easy access.

MDEH1
1 lbs

RTS
Pushbutton Timer
The pushbutton timer is compatible with Fantech SHR, VHR and SER series models. The button activates the system to run in continuous mode for a period of time, it then returns to the predetermined setting. To cancel this operation, simply press the button a second time.

RTS2 20 min .5 lbs
RTS5 20/40/60 min .5 lbs

EDF
Triple Function Wall Control Timer
An electronic wall control timer is compatible with all Fantech HRV/ERV models (except SH/VH 704). This control activates the system on 3 possible modes of operation: continuous low speed operation (Green), Intermittent 20 minutes on, 40 minutes off (Yellow) and continuous high speed or boost (Red).

EDF1 .5 lbs
EDF1R .5 lbs

ECO-Touch®
Programmable Wall Control
Technologically advanced and feature-rich; the ECO-Touch® provides contractors and homeowners with a higher level of control over indoor air quality. The MAX mode gives you the extra ventilating power you need to quickly clear the air by taking advantage of the system’s powerful fans.

- Preferences for desired indoor relative humidity
- Ventilation movement is displayed on LCD backlit touch screen
- 20 minute ventilation / 40 minute recirculation mode

Application-specific Ventilation Accessories

Residential-capacity Dryer Exhaust

DBLT 4W
Lint Trap for Dryer Exhaust Fans

The lint trap box is equipped with a screen that filters the air that feeds into the dryer exhaust fan. The screen catches any airborne lint in the ductwork that isn't caught by the dryer's lint screen. The less lint accumulation, the better your dryer performs. Even if you're cleaning the lint trap once a month, it's a good idea to look through its window to make sure the filter isn't full. DBLT 4W is made of galvanized metal sheet and fits a 4 inch duct. The device can be used when the duct length between dryer and exhaust fan is between 5 and 15 linear (not equivalent) feet.

DBLT4W
2.25 lbs

DB10
120 VAC
2 lbs

DB10
Pressure Switch

Automatic pressure switch (120V) allows for fully automatic operation of dryer exhaust fan. Fan runs for 10 minutes when positive pressure is sensed in the duct line then shuts off and turns on again as needed.

Radon Mitigation Systems

LDVI® Bulk Packs
Radon Specific Couplings

Complete your Radon system with a pair of Fantech's new LDVI® (Low Durometer Vibration Isolating) couplings. Designed specifically for radon mitigation applications, our patent pending LDVI couplings are molded with a softer, more flexible (low durometer) material as compared to standard plumbing couplings, making installation easier, while providing superior vibration isolation.

LDVI couplings are designed to work with both 3" and 4" PVC pipe connections and can be used to enhance the performance of ANY radon fan on the market.

Accessories for Ducted Air Systems

Duct and Duct-mounted Components

IR
Iris Damper
The Iris Damper is the ideal device for measuring and adjusting airflow through a duct. The design of the adjustable aperture ensures low turbulence resulting in minimal self-generated noise. The damper is manufactured from galvanized sheet metal and is fitted with a rubber seal tested for air-tightness.

Protective install distance **D=damper diameter**

- before bends - 1 x D
- after" - 1 x D
- before T-pipes - 3 x D
- after " - 1 x D
- before supply-air devices - 3 x D

Bathroom Ventilation

How do I select the right Fantech Premium Bath Fan for my bathroom?

According to the guidelines of HVI (Home Ventilating Institute) baths that are 100 sq.ft. or smaller require 1 cfm per square foot of bathroom or a minimum 50 cfm of fresh airflow. To find the square footage simply multiply the length of the bath by the width. Allow 50 cfm per standard tub, shower or toilet. Whirlpool, garden and jetted tubs are calculated at 100 cfm. Example: Bathroom 9’ x 7’ = 63 sq.ft. you require the PB110 or PBW110.

Example:

Bathroom 11’ x 14’ = 154 sq ft, 1 Toilet + 1 Shower + 1 Tub = 150 CFM you require the PB270L7-2. Note: HVI recommends that Steam Showers use a separate fan on a timer so that the fan may be shut off during shower use and then run afterwards to dry out the shower stall. For proper airflow in typical installations (when duct losses aren’t calculated) use the 0.4” Pst rating point for the correct fan selection. Bathroom doors need to have at least ¾” clearance to the finished floor to allow for make up air.

What installation tips can you give me to get the most from my Fantech Premium Bath fan?

Keep the duct runs as short as practical. (under 25 feet). The inner core of Flexible Insulated Ducting should be as tight and straight as possible and sealed to the grille housing/fan/wye connector/termination with aluminum foil tape. Ensure there is a minimum of 3 duct diameters between any fitting and the inlet/outlet of the fan. For the PB270L10-2 and PB370-2: It is better to have a short run of larger trunk line from the wye connector to the inlet of the fan and from the fan outlet to the termination point and longer runs of smaller duct from the grille/light to the wye connector.

How many bathrooms can I vent with one fan?

Fantech generally recommends that no more than 3 bathrooms be exhausted together. Whenever the fan runs, air will be exhausted from all the rooms that are connected to one system. This, in combination with the much higher cost of large fans, means that it is generally beneficial to exhaust a maximum of 3 smaller, or two larger, bathrooms together.

What is Static Pressure?

Static Pressure is a measure of resistance to airflow as a fan pushes or pulls air through a duct. It is measured in inches of water gauge, such as 0.1” w.g. to show the resistance is equal to raising a column of water 0.1” or one-tenth of an inch.

Can Fantech Premium Bath Fans with LED and Halogen grille/lights be installed over a tub or shower?

Both the LED and Halogen grille/lights are UL listed for wet locations. When installed over a tub or shower they must be connected to a GFCI (Ground Fault Circuit Interrupter) – protected branch circuit.

Can I turn on my light separate from my fan?

Yes, Fantech recommends that the light be on its own switch and the fan on a timer FD 60EM or a humidity sensor IPHS5.

Can I cover my Fantech Premium Bath Fan grille/light housing with insulation?

Yes, the grille/light units are Insulation Contact (IC) rated.

Should I run the fan after I have finished in the shower?

The Home Ventilating Institute (HVI) recommends running the fan for a minimum of 20 minutes after using the bathroom to completely exhaust moisture. Fantech offers a complete line of programmable and manual controls, switches and timers for your convenience. The FD60EM. 10,20,30,60 minute timer or Ventech Programmable switches (VT20M/VT20A) are just two examples of optional controls you can use.

I am venting two bathrooms with one fan, how do I wire the timers?

Wiring the timers parallel as per the installation instructions will allow each timer to work independently.

Can the fan be mounted horizontally?

Yes, the orientation of the fan will not affect its operation. When running horizontal duct to the outside it is advisable to slightly slope the duct down to the outside vent (this allows condensation (if any) to naturally run out of the duct).

Can I use my Fantech Premium Bath Fan to provide continuous ventilation?

When used with the Fantech Ventech Fan Control, your PB fan will provide a cost effective way to comply with code requirements for controlled ventilation in residential applications.

Can Fantech plastic grilles be painted?

Yes, All Fantech plastic grilles can be painted. A paint that is suitable for plastic should be used. An example of such paint is “Krylon Fusion for Plastic”. If a paint that is not suitable for plastic is to be used, a primer coat of paint that is suitable for plastic should be applied first. An example of such paint is “Rust-oleum Specialty Plastic Primer”. Paints that are not suitable for plastic that are applied directly to a plastic grille are not likely to yield satisfactory results. As with all painting processes, surface preparation (proper cleaning) and following the directions of the paint manufacturer are critical to the quality of the painted grille. The grille needs to be removed from the installation for painting. This will prevent paint from being applied to the lamp socket contacts, damper flap, or labels.

What is the Warranty on Premium Bath Fans?

Fantech Premium Bath Fan Warranty is 7 years.

Can a motion sensor switch be added to a Fantech Bath Exhaust Fan?

Any motion sensor that has a 120V output will operate the Fantech fan.

How many auxiliary controls (VT20A) can be used with one Ventech Master Control (VT20M)?

Four VT20A auxiliary controls can be used with one VT20M. This allows ventilation in areas such as bathrooms, laundry rooms, workshops, etc. The VT20A is connected to the VT20M with 2 core insulated cable.

Is there a way to replace my existing noisy bath fan with a Fantech Premium Bath fan without having to drywall the bathroom ceiling?

Installing a Fantech Bath Retrofit Kit (BFRK100) is an easy way to convert your noisy bath fan into a quiet yet powerful ventilation system. Kit includes inline fan, fittings and accessories. Your existing fan grille and housing stay in place. No drywall work needed. Easy to follow instructions will show you how.

I don’t have room to install a remote inline fan in my application. Is there another fan I could use?

Fantech’s PBW 110 comes with a ceiling grille and externally mounted fan. It’s ideal for basement bathrooms, first floor powder rooms where the duct from the ceiling grille can be routed with the joist bay to an outside wall/fan.

NEW PRO™ Series Bath Fan is a Contractor’s Best Friend

Dryer Exhaust

When is a dryer exhaust necessary?

According to some dryer installation instructions and local building codes, booster fans should be added in the dryer duct run when the length of duct exceeds 25 feet with no bends, 20 feet with one bend or 15 feet with 2 bends. With an existing system you may find that drying times are far longer than the dryer manufacturers instructions give, this may indicate that you have an duct run longer and more restrictive than your dryer can handle. Installing a Fantech dryer booster in the duct line will relieve the excess pressure in the duct allowing the dryer to operate as designed.

What is the maximum length of duct that can be used with a Fantech dryer exhaust fan?

The DEDPV-705, DBF 4XL, DBF 4XLT and RVF 4XL (with DB10 pressure switch) are effective for up to 130 equivalent feet of 4" hard duct. The DBF 110 is effective up to 108 equivalent feet of 4" hard duct. At these lengths the booster fans will maintain a velocity 1,200 feet per minute which will keep lint particles airborne guarding against build up in the duct.

How do I calculate my duct run?

To calculate the length of your planned duct run, measure from the dryer to the external venting point in the roof or wall. For each bend or elbow add 5-7 feet to your total duct run calculations (or as required by local codes).

How do dryer exhaust fans work?

When the dryer is on, the patented pressure switch senses positive pressure in the duct and turns on the booster fan for a pre-determined time, at the end of the timer cycle the switch checks for positive pressure in the duct, if there is pressure in the duct the cycle continues.

Where in the duct line can I install my Fantech exhaust fan?

Fantech recommends that the dryer exhauster be installed as close to the end of the duct run as possible with a minimum of 5 linear feet between the outlet of the dryer and the inlet of the fan.

Can the Fantech inline dryer exhaust fans be mounted horizontal?

As long as the air flow direction is correct and the pressure switch is vertical, the Fantech inline dryer booster fan can be mounted in any orientation.

I am adding a Fantech dryer exhaust fan to my existing dryer duct line because my duct run is too long for my dryer to operate efficiently. Do I have to do anything special before I install the fan?

Ensure the duct is clean and free of lint build up, this may require the services of a professional duct cleaning company or chimney sweep. Otherwise on start up the fan may pull lint into the impeller blocking the airflow and stopping the fan.

What maintenance does my Fantech inline dryer booster fan require?

Since the fan bearings are sealed for life and provided with an internal lubricant no additional lubrication is necessary. Over time the fan impeller may accumulate some lint. Periodic inspection, based upon dryer usage, should be performed to ensure the fan impeller is not obstructed or loaded with lint. Under normal conditions, the fan should be inspected annually. To help minimize lint accumulation in the ductwork, we recommend to install DBLT 4W, Secondary Lint Trap.

How can I tell if my Fantech dryer exhaust fan is working?

With the dryer operating, open the dryer door. The fan on the dryer will stop but you should still hear air being pulled through the dryer from the booster fan. Fantech's DBF 4XLT and DEDPV-705 feature a wall-mount indicator panel that mounts in the wall near the dryer. An LED light on the indicator panel lets the user know that the fan is operating correctly.

Fresh Air Appliances

I have a fresh air appliance in my home and the air in my house is too dry or too humid. What's wrong?

A fresh air appliance is not made to take away or add humidity (act like a dehumidifier or humidifier). It is a "fresh air appliance". It will always depend on what the outside air is. If there is dry or humid air outside, then that is what will be brought in. If you do not want the same air conditions that are outside, inside. Then reduce the runtime (20 minutes per hour with ECO-Touch® or EDF7) on the fresh air appliance or, if you have a recirculation model, put it into recirculation mode.

What is the warranty on fresh air appliances' cores?

Aluminum HRV cores have a limited lifetime warranty. A properly maintained HRV core should last a very long time. ERV cores carry a 5 year warranty.

What is the difference between a Heat Recovery Ventilator (HRV) and an Energy Recovery Ventilator (ERV)?

An HRV transfers "sensible" energy (Heat/Cool) from the high (heat) to the low (cool), tempering the cool air in/out.

An ERV transfers the "sensible" energy the same as the HRV, it also transfers "Latent" energy (humidity) from the high (warm) to the low (cool) side. In southern areas of the country where the relative humidity is generally higher outside than inside and ERV transfers most of the high incoming relative humidity to the cool exhaust air stream.

Can a fresh air appliance with energy recovery be used in Northern climates?

Yes, an ERV can be used in areas where the outdoor temperature is low. It is recommended that an ERV with Defrost capability be installed where the temperature drops below 23 degrees F for more than 48 hours to stop icing of the core.

What control or controls can be used for a Fantech fresh air appliance?

Fantech has an extensive range of convenient wall controls that will help you efficiently operate your HRV or ERV. Please, check what control is compatible with your product.

Where do I install a Fantech Whole House HEPA filtration unit?

DM3000P – Normally installed on the cold air return of your furnace or air handler.

CM3000 and CM3000I - Can be installed into the cold air return similar to the DM3000P or used as a stand alone unit. It can also be integrated with a Fantech HRV/ERV.

Can the HEPA unit be installed in an unconditioned space like a garage?

The CM3000I has an insulated cover suitable for installations in unconditioned spaces.

How often do I need to change the filters on my Fantech HEPA filtration unit?

The Pre-filter and Carbon filters are normally changed every 3 to 6 months or as needed. The HEPA filter should have a life span of 2 to 5 years depending on the amount of particulate in the air and the maintenance of the prefilter and carbon filter.

Where can I buy replacement filters for the Fantech HEPA filtration unit?

Contact one of our Customer Care Representatives 800.747.1762 (toll free) for information and pricing.

Kitchen Ventilation

Why do I need an active makeup air system for my kitchen?

Every time an exhaust fan removes air from your house, an equal volume of air must enter. The air that enters cracks in a home's envelope to replace air that is exhausted is called makeup air. Two existing building practices affecting makeup air are causing increasing problems for homeowners: homes are getting tighter, and trendy multiple burner stoves require more powerful range hoods to exhaust heat and moist.

So where does a powerful range-hood get its makeup air? If the house doesn't have enough random air leaks around windows, doors, and mudsills, the makeup air is often pulled backwards through water-heater flues or down wood-burning chimneys — a phenomenon called backdrafting. Since the flue gases of some combustion appliances can include carbon monoxide, backdrafting is dangerous. In some cases, it can be life-threatening.

In newly engineered homes with range hoods over 400 CFM, there is a new code dictating air replenishment. Although this code has been on the books since 2009, inspectors are now enforcing it.

International Residential Code IRC 1503.4 Exhaust Makeup Air in a High-Efficiency Residential Environment reads:

“Exhaust hood systems capable of exhausting in excess of 400 cfm shall be provided with makeup air at a rate approximately equal to the exhaust air rate. Such makeup air systems shall be equipped with a means of closure and shall be automatically controlled to start and operate simultaneously with the exhaust system.”

Can I use a Makeup Air System with multiple exhaust fans?

You can not. The Makeup Air System is designed to work in conjunction with one kitchen exhaust range hood / fan only.

May I install the Makeup Air System in my basement?

Yes, you may. There are some limitations to consider: do not install the makeup air system and supply air duct work directly above or closer than a distance of two feet to any furnace or its supply plenum, boiler, water tank or any heat producing appliances.

Can I install a MUAS in an uninsulated attic/basement?

Yes! Simply insulate the ductwork to the R value required for your area.

Can the Fantech Makeup Air Systems be used with fireplace applications?

Absolutely not, the Fantech system is designed exclusively for residential kitchen cook top ventilation.

What is the best location for a interior register to bring the fresh air into the home?

The supply air register should be installed as close the the exhaust kitchen range hood as possible.

May I install the Makeup Air System in a vertical position?

Due to its component-based, field-assembled nature, the Fantech Makeup Air System offers flexibility as to where and how it can be installed into a building. The installation location should be suitable for periodic inspection and maintenance. It is not required that the individual system components be installed in a linear (straight line) arrangement.

Can the components be installed with a 90 degree bend instead of a straight line to reduce space requirements?

Yes, the components can be split into segments to support tight quarters. Be mindful that care should be taken with regards to the heater when altering the air path through the device. A minimum of 24 inches should be installed before and after the heater to ensure linear air flow across the elements. Non-linear air flow can create pockets of low air that can cause the element to overheat and shorten the elements life.

How much space is required for a Makeup Air System?

Maximum length is 9.5 linear feet with optional heater. Minimum length is 8.5 linear feet without the optional heater.

Should I use a heater with a makeup air system from Fantech?

If you are in an area that experiences cold weather in the winter time, you will want to have a MUAH heater system to temper the air coming into your home. See Zone and Heater chart for help in deciding.

Is it possible to change the output temperature of the heater?

Yes you can, however the heater is factory set to optimize its performance over a wide range of cfm settings. Remember for the maximum temperature gain lower cfm rates are recommended.

How often should the filter be changed?

Inspection of the filter should be performed at a minimum quarterly basis until a pattern can be established for the particular air quality of the surroundings. Once a determination is made lest frequent inspections may be practical. To order a replacement filter, contact Customer Support.

Where should the Silencer be placed in my Fantech Kitchen Hood exhaust system?

The silencer may be placed anywhere inline between the hood and the remote mounted inline or exterior mounted fan. However, it is normally mounted close to the inlet of the remote fan for ease of installation.

What is the purpose of a silencer and when do I need to use one?

The Fantech LD silencer reduces the “perceived” noise of a kitchen ventilation system by 50-60%. This is particularly important with range hoods where the airflow rate is generally high (300+ cfm).

Does Fantech sell decorative Range Hoods?

No, Fantech sells hood liners which can used inside a wood hood that matches your cabinets or custom made facade such as mantle style hoods.

Fantech sells hood liners in several sizes. The HL Series hood liners are constructed of all stainless steel. They are available in 30”, 36”, 42” and 48” width. Depth of 18”.
