

Dell PowerEdge RAID Controller (PERC) Command Line Interface (CLI) Reference Guide

Notes, Cautions, and Warnings

 NOTE: A NOTE indicates important information that helps you make better use of your computer.

 CAUTION: A CAUTION indicates either potential damage to hardware or loss of data and tells you how to avoid the problem.

 WARNING: A WARNING indicates a potential for property damage, personal injury, or death.

Overview

You can set up, configure, and manage your Dell PowerEdge RAID Controller (PERC) by using the Command Line Interface (CLI).

Getting started with your PERC card

To install the PERC card, perform the following steps:

1. Unpack your PERC card.
2. Cable the PERC card inside your Dell PowerEdge system. See the PERC User's Guide for detailed cabling instructions.
3. Boot to the operating system.
4. Download and install the drivers and firmware for the PERC card. See the PERC User's Guide for driver and firmware installation details.
5. Create virtual disks and specify RAID levels for the hard drives using any of the following utilities:
 - BIOS Configuration. See the PERC User's Guide for details on how to access and use the BIOS Configuration Utility.
 - OMSS. See the PERC User's Guide for details on how to use OpenManage Storage Management software.
 - PERC CLI, covered in this reference guide.

Related documentation

PERC product documentation includes a PERC User's Guide that discusses the features, installation, management, and troubleshooting of your PERC card. Find PERC User's Guides and documentation of other storage controllers and PCIeSSD at dell.com/storagecontrollermanuals.

Additional documentation may relate to the integration of PERC cards into your network:

- For Dell OpenManage documents, go to dell.com/openmanagemanuals.
- For operating system documents, go to dell.com/operatingsystemmanuals.
- For PowerEdge documentation, go to dell.com/poweredgemanuals.
- For PowerVault documentation, go to dell.com/powervaultmanuals.

2

Accessing the command prompt

Access the CLI in either Microsoft Windows or Linux operating systems.

Using CLI commands from Windows command prompts

Ensure that you copy the **perccli.exe** and **perccli64.exe** files to **C:\Windows\System32**.

To access the command prompt in systems using the Microsoft Windows operating system, perform the following procedure:

1. Click **Start → Run**.
The **Run** window is displayed.
2. In the **Open** field, type **cmd**, and then click **OK**.
The **Administrator: Command Prompt** window is displayed, where you can execute the PERC CLI commands.

Using CLI commands in Linux

Perform the following procedures to access the command prompt in systems using the Linux operating system:

1. To install the percli RPM, run **rpm -ivh <percli-x.xx-x.noarch.rpm>**, or to upgrade the percli RPM, run **rpm -Uvh <percli-x.xx-x.noarch.rpm>**.
2. Install the cd to **/opt/MegaRAID/perccli**.
3. As a root user, run **./perccli**.

Using the PERC CLI

You can use the Dell PowerEdge RAID Controller (PERC) Command Line Interface (CLI) to manage RAID controllers, configure PERC cards, and perform a variety of controller and enclosure specific operations.

PERC CLI commands overview

The following table lists PERC CLI commands. For more information about the commands, type `perccli help`.

Table 1. PERC CLI commands

Commands	Description
add	Adds or creates a new element to controller like VD, Spare and so on
delete	Deletes an element like VD and Spare
show	Displays information about an element
set	Set a particular value to a property
start	Start background operation
stop	Stop background operation
pause	Pause background operation
resume	Resume background operation
download	Downloads file to given device
expand	Expands size of given drive
insert	Inserts new drive for missing
transform	Downgrades the controller
/cx	Controller specific commands
/ex	Enclosure specific commands
/sx	Slot/PD specific commands
/vx	Virtual drive specific commands

Commands	Description
/dx	Disk group specific commands
/fall	Foreign configuration specific commands
/px	Physical specific commands
/ [bbu cv]	Battery Backup Unit, Cachevault commands

Getting a complete list of CLI commands

To view a full list of available CLI commands, use one of the following CLI commands:

- `perccli64.exe -help > [filename]`
- `perccli64.exe -? > [filename]`

Checking controller availability

Syntax

```
perccli show
```

Description

Displays information about the adapter and the operating system.

Result

```
Status Code = 0
Status = Success
Description = none

Number of Controllers = 1
Host name = WIN-RFV0S1VAILB
Operating System = Windows Server 2012

System Overview :
=====
-----
Ctl Model      Ports   PDs    DGs   DNOpt   VDs   VNOpt   BBU   sPR   DS   EHS   ASOs
-----
0  Adapter     8       9      2      0       2     0       Fld   On    3     N     0
-----
```

Viewing controllers

Syntax

```
perccli show ctrlcount
```

Description

Displays the number of controllers detected in the server.

Result

```
Status Code = 0
Status = Success
Description = None

Controller Count = 1
```

Viewing free space information

Syntax

```
perccli /c0 show freespace
```

Description

Displays the free space details of the controller.

Result

```
Status Code = 0
Status = Success
Description = None

FREE SPACE DETAILS :
=====
Total Slot Count = 0
ID-Index|DG-Drive Group|AftrVD-Identify Freespace After VD
```

Viewing disk1 information

Syntax

```
perccli /c0/d1 show
```

Description

Displays information about disk1.

Result

```
Controller = 0
Status = Success
Description = Show Diskgroup Succeeded

Total foreign drive groups = 1

Importing the foreign configuration

Syntax

```
perccli /c0/fall import
```

Description

Imports the foreign configurations of the selected controller.

Result

```
Controller = 0
Status = Success
Description = Successfully imported foreign configuration
```

Viewing BBU information

Syntax

```
perccli /c0/bbu show all
```

Description

Displays information related to the Battery Backup Unit (BBU) of a controller.

Result

```
Controller = 0
Status = Success
Description = None

Getting help

You can get help with your Dell product by contacting Dell, or send feedback on product documentation.

Contacting Dell

 **NOTE:** If you do not have an active Internet connection, you can find the contact information on your purchase invoice, packing slip, bill, or Dell product catalog.

Dell provides several online and telephone-based support and service options. Availability varies by country and product, and some services may not be available in your area. To contact Dell for sales, technical support, or customer service issues:

Go to dell.com/contactdell.

Documentation feedback

If you have feedback for this document, write to documentation_feedback@dell.com. Alternatively, you can click on the **Feedback** link in any of the Dell documentation pages, fill out the form, and click **Submit** to send your feedback.

Locating your system service tag

Your system is identified by a unique Express Service Code and Service Tag number. The Express Service Code and Service Tag are found on the front of a physical DR Series system by pulling out the information tag. This can also be found on the support tab in the GUI. This information is used by Dell to route support calls to the appropriate personnel.
