PRODUCT SAFETY NOTICE

Many electrical and mechanical parts in this chassis have special characteristics. These characteristics often pass unnoticed and the protection afforded by them cannot necessarily be obtained by using replacement components rated for higher voltage, wattage, etc. Replacement parts that have these special safety characteristics are identified in this manual and its supplements; electrical components having such features are identified by a  in the schematic diagram and the parts list.

Before replacing any of these components, read the parts list in this manual carefully. The use of substitute replacement parts that do not have the same safety characteristics as specified in the parts list may create shock, fire or other hazards.

SPECIFICATIONS

Description	Nominal spec.	Limit spec.
Frequency Coverage VHF LOW (or MID*) AIRCRAFT VHF HIGH UHF		30 ~ 54 MHz 5 kHz steps *or 68 ~ 88 MHz 5 kHz steps 108 ~ 136 MHz 25 kHz steps 138 ~ 174 MHz 5 kHz steps 380 ~ 512 MHz 12.5 kHz steps
Sensitivity (20 dB S/N) FM: 3 kHz DEV. at 1 kHz AM: 60% MOD. at 1 kHz VHF LOW (or MID*) FM AIRCRAFT AM VHF HIGH FM UHF FM	0.5 μ V 2.0 μ V 1.0 μ V 1.0 μ V	2 μ V 5 μ V 3 μ V 4 μ V
Selectivity -6 dB -50 dB	$\pm$ 9 kHz $\pm$ 15 kHz	$\pm$ 12 kHz $\pm$ 18 kHz
Spurious Rejection at 40 MHz (or 78 MHz*) at 120 MHz at 154 MHz at 450 MHz (except primary image)	50 dB 50 dB 50 dB	40 dB 40 dB 40 dB Not specified
IF Rejection 10.7 MHz at 154 MHz	60 dB	40 dB
Modulation Acceptance (EIA RS-204-A)	$\pm$ 8 kHz	$\pm$ 5 kHz
Signal to Noise Ratio VHF LOW (or MID*) AIRCRAFT VHF HIGH UHF	45 dB 35 dB 45 dB 35 dB	30 dB 25 dB 30 dB 25 dB
Residual Noise (Vol. Min.)	3 mV	5 mV
Scanning Rate Fast Slow	8 channels/sec. 4 channels/sec.	6 ~ 10 channels/sec. 3 ~ 5 channels/sec.
Search Rate Fast Slow	8 steps/sec. 4 steps/sec.	6 ~ 10 steps/sec. 3 ~ 5 steps/sec.
Priority Sampling	2 sec.	1 ~ 3 steps.
Scan Delay Time	2 sec.	1 ~ 3 sec.
Audio Output Power (T.H.D. 10 %)	1.5 W	1.0 W
Channels of Operation Channel, Frequency and Mode Display Receiving System Power Source Tape Out Speaker Accessory Dimensions Weight	Any 200 channels in any band combination Liquid crystal display Direct Key entry Digital Frequency Controlled Synthesizer, Superheterodyne 1st IF: 10.7 MHz 2nd IF: 455 kHz AC 120V, 60 Hz, 15W max. DC 13.8V, 8W Z=10 kohm, 500 mV nominal, 300 mV limit Built-in 3" (77mm) 8 ohm Dynamic Speaker Telescopic antenna Approx. 24-13/16" (63cm) Car mounting bracket with screws and DC cable Approx. 3-1/8" x 10-2/8" x 8" (80 x 260 x 200 mm) HWD 4.4 lbs (2.0 kg)	

NOTE: Nominal specs represent the design specs; all units should be able to approximate these -- some will exceed and some may drop slightly below these specs. Limit specs represent the absolute worst condition that still might be considered acceptable; in no case should a unit perform to less than within any limit spec.

* VHF MID range (68 ~ 88 MHz) is for European and Australian Models only.

BLOCK DIAGRAM

PRINCIPLES OF OPERATION

The PRO-2021 is a PLL (Phase Locked Loop) Synthesized VHF/UHF AM/FM Receiver, controlled by a CPU (Central Processing Unit) via the keyboard.

The VHF Low Band (30 ~ 54 MHz) or Mid Band (68 ~ 88 MHz) and High Band (138 ~ 174 MHz) are received in 5 kHz increments. Aircraft Band (108 ~ 136 MHz) is set up for 25 kHz increments, and the UHF Band (380 ~ 512 MHz) for 12.5 kHz increments.

Receiving frequency range, frequency determination, scanning speed, delay time, etc., are all functions controlled by the CPU. The CPU is able to do only the assigned functions, and no modification of the CPU is feasible.

The following paragraphs explain the operation of the circuit in terms of the functional blocks:

A varactor (variable capacitance diode) tuning ("Automatic Tuning System") is employed on all Bands.

Field-effect transistors (FET) are used in the RF/MIX circuits of Low (Mid), High and Aircraft Bands, to achieve optimum mix-modulation and mutual-modulation characteristics.

Q14 amplifies the 10.7 MHz IF.

A 10.7 MHz monolithic Crystal Filter is incorporated for better selectivity.

IC-2 contains the Local Oscillator, Mixer, IF Amplifier, Quadrature FM Detector, Noise Amplifier and DC amplifier. A Crystal Oscillator produces 10.245 MHz, which mixed with 10.7 MHz, resulting in 455 kHz IF. A 455 kHz Ceramic filter is provided to increase selectivity. The 455 kHz IF is amplified in the IF Amp stage, and a Quadrature FM Detector detects it to an audio signal. A portion of the 455 kHz Ceramic Filter output is picked up, amplified and detected by the AM IF Amp, which consists of Q15 and Q16 and is then applied to the next stage via the ANL circuit.

Detected output of AM and FM is applied to IC-9. IC-9 amplifies audio signals and feeds them to the speaker.

The zeromatic circuit consists of IC-5 and IC-6 and Q20, 21 and functions in the search mode.

IC-11 is the CPU. The CPU does data processing, calculation, etc. Any unstable supply voltage (V_{DD}) to the CPU can produce CPU malfunctions, such as wrong data processing, wrong data transfer, etc. To overcome this C149 and R146 "initialize" the CPU. Initialization is done when RESET switch is pushed. Figure A shows initializing waveform.

The CPU contains two clocks. One produces the waveform shown in Fig. B at Pins 49 and 50, which is used for program functioning. The other waveform, which appears at Pins 3 and 4, is derived from X-3 (32.768 kHz) which is used to determine Delay time, LCD display, etc. (Shown in Fig. C).

IC7 is the PLL frequency synthesizer. The VCO output is 1/64 or 1/65 divided by Pre-scaler IC1. The output of Pin 15 and 16 of IC7 is applied to the VCO control via the Low Pass Filter (Q22, 23, 24).

Figure A

Figure B

Figure C

GENERAL OPERATION OUTLINE

ALIGNMENT AND TEST POINTS

1. Oscilloscope (0 ~ 500 kHz, 0 ~ 50 MHz)
2. AC SSVM
3. DC SSVM
4. Frequency Counter (200 MHz)
5. 8-ohm dummy load
6. Slow Sweep Generator with variable marker (10.7 MHz)
7. VHF Sweep Generator with variable marker (30 ~ 54 MHz, 108 ~ 174 MHz)

8. UHF Sweep Generator with variable marker (380 ~ 512 MHz)
9. FM Signal Generator (30 ~ 54 MHz, 108 ~ 174 MHz, 380 ~ 512 MHz)
10. AM Signal Generator (108 ~ 136 MHz)

The test equipment and Receiver should be warmed up at least 30 minutes before proceeding with alignment.

NOTE 2: *Three silver oxide batteries are required to hold the memory when main battery is disconnected. Always be sure the unit is loaded with fresh batteries or the pre-programmed channels will be lost (and will have to be re-programmed).*

NOTE 3: For servicing VHF Mid band of European/Australian models, see Appendix on page 43.

IF SECTION ALIGNMENT

Step 1: Connect instruments as shown below.

Step 2: Adjust T10 for maximum output so that the 455 kHz marker is in the center of the discriminator curve and for best linearity, as shown above. During alignment, maintain Sweep Generator output at the lowest level possible to prevent overloading.

VCO ALIGNMENT

VHF LO BAND

- Step 1: Connect a DC SSVM to TP5 and ground.
 Step 2: Program CH1, 2 and 3 as follows:
 CH1 (30 MHz), CH2 (40 MHz), CH3 (54 MHz).
 Step 3: Select Channel 3 (54 MHz) and adjust TC3 for 13V on the DC SSVM.
 Step 4: Select Channel 1 (30 MHz) and adjust T7 for 1.0V on the DC SSVM.
 Step 5: Repeat steps 3 and 4 until no improvement is observed. The DC SSVM should read as below.
- | | | |
|--------|----------------|--------------|
| 30 MHz | Voltage at TP5 | 0.9 – 1.0V |
| 40 MHz | Voltage at TP5 | 4.1 – 4.5V |
| 54 MHz | Voltage at TP5 | 12.5 – 13.1V |

REFERENCE FREQUENCY OSC ALIGNMENT

- Step 1: Connect Frequency Counter to Q7 Collector through a ceramic capacity (47 ~ 100 pF) and ground.
 Step 2: Select Channel 2 (40 MHz) and observe VCO Frequency.
 Step 3: Adjust TC6 so that the frequency is 50.700 MHz $\pm$ 20 Hz.
 Step 4: Repeat VHF LO BAND VCO ALIGNMENT.

AIRCRAFT HI BAND AND UHF BAND

- Step 1: Connect a DC SSVM to TP-5 and ground.
 Step 2: Program CH1, 2, and 3 ~ 9 as follows:
 CH1 (108 MHz), CH2 (380 MHz), CH3 (138 MHz), CH4 (120 MHz), CH5 (150 MHz), CH6 (450 MHz), CH7 (136 MHz), CH8 (174 MHz), CH9 (512 MHz).
 Step 3: Select Channel 9 (512 MHz) and adjust TC4 for 13V on the DC SSVM.
 Step 4: Select Channel 1 (108 MHz) and adjust T8 for 1.0V on the DC SSVM.
 Step 5: Repeat steps 3 and 4 until no improvement is observed. The DC SSVM should read as below.
- | | | |
|---------|----------------|--------------|
| 108 MHz | Voltage at TP5 | 0.9 – 1.1V |
| 380 MHz | Voltage at TP5 | 1.2 – 2.0V |
| 138 MHz | Voltage at TP5 | 1.8 – 2.5V |
| 120 MHz | Voltage at TP5 | 2.2 – 3.0V |
| 150 MHz | Voltage at TP5 | 3.7 – 4.7V |
| 450 MHz | Voltage at TP5 | 5.5 – 6.6V |
| 136 MHz | Voltage at TP5 | 5.6 – 6.5V |
| 174 MHz | Voltage at TP5 | 9.8 – 11.0V |
| 512 MHz | Voltage at TP5 | 12.5 – 13.1V |

RF AMP ALIGNMENT

VHF LO BAND

Step 1: Connect instruments as shown below.

Step 2: Program 30 MHz (CH1), 40 MHz (CH2) and 54 MHz (CH3).

Step 3: Select Channel 2 (40 MHz) and adjust T3 and T6 as shown below RF waveform.

Step 4: Check Channels 1 through 3 for the below RF waveform. A slight deviation as shown below is acceptable.

AIRCRAFT BAND

Step 1: Connect instruments: Same connection as VHF Lo band except Sweep Generator frequency, change to 108 MHz to 174 MHz.

Step 2: Program 108 MHz (CH1), 127 MHz (CH2), 136 MHz (CH3)

Step 3: Select Channel 2 (127 MHz) and adjust T1 and T4 for maximum RF waveform.

Step 4: Check Channels 1 through 3 for maximum RF waveform. Slight deviation as shown below is acceptable.

NOTE: Perform AIRCRAFT BAND RF AMP ALIGNMENT before VHF-HI BAND.

If this procedure is not followed, alignment may be impossible and/or inaccurate.

VHF-HI BAND

138 MHz (CH1), 154 MHz (CH2), 174 MHz (CH3)

- Step 1: Connect instruments: Same connection as VHF Lo band except Sweep Generator frequency, change to 138 MHz to 174 MHz.
- Step 2: Program 138 MHz (CH1), 154 MHz (CH2), 174 MHz (CH3).
- Step 3: Select Channel 2 (154 MHz) and adjust T2 and T5 for maximum RF waveform.
- Step 4: Check Channels 1 through 3 for maximum RF waveform. Slight deviation as shown below is acceptable.

UHF BAND

- Step 1: Connect instruments as shown below.

- Step 2: Program 380 MHz (CH1), 450 MHz (CH2) and 512 MHz (CH3).
- Step 3: Select Channel 1 (380 MHz) and adjust TC1 and TC2 as shown below.
- Step 4: Check Channels 1 ~ 3 for the below RF waveform at each frequency marker. A slight deviation as shown below is acceptable.

ZEROMATIC FUNCTION AND HOW TO CHECK IT

(Zeromatic functions when OUTPUT is in "H" level.)

	$0 < e_1 < e_3$	$e_3 < e_1 < e_2$	$e_2 < e_1 < V_{CC}$
OUTPUT (IC5 Pin No. 10)	L	H	L

To adjust e_1 voltage, receive signal in Manual mode, and set T10 to obtain 2.8V ($1/2V_{CC}$) at TP-3. It is convenient to use the National Weather Service Signal for the adjustment. In the event Zeromatic does not function correctly, refer to "REFERENCE FREQUENCY OSC ALIGNMENT" and check 50.700 MHz $\pm$ 20 Hz, and adjust T10 again at 2.8V DC while a Signal is being received.

KEYS ACCESS PULSE OUTPUT(IC11)

NOTE: Use a signal at Pin 66 of IC11 as trigger, and then observe the keys access pulse when **PROGRAM** key is pressed.

PLL DATA WAVEFORM(IC11)

NOTE: Enter 150.000 MHz to channel 1 and lock out other channels. Observe the waveforms while scanning.

RECEPTION CHECK

NOTE: 1→5.5V
0→0V

Table-1

Q10 ~ Q13 COLLECTOR V	Q10	Q11	Q12	Q13
FREQ. BAND				
LOW or MID	1	0	0	0
UHF	0	1	0	0
HI	0	0	1	0
AIR	0	0	0	1

MEMORY CHECK

NOTE 1: Prior to checking CPU System, measure supply voltage to ICs. (See schematic drawing.)

NOTE 2: While checking the following items, the ICs can "latch up". If so push RESET switch about one second and then continue.

TROUBLESHOOTING

Symptom	Cause/Remedy
1) Display does not light and no sound when POWER is on. Volume Control : MAX. Squelch Control : Counterclockwise (CCW)	1) Faulty power cord: ● Replace the power cord. 2) Defective power transformer: ● Replace the power transformer. 3) Defective power switch: ● Replace the Volume control (VR-2). 4) Defective rectifier D43: ● Replace the D43. 5) Defective voltage regulator circuit components: ● Replace the defective parts.
2) Display lights but no sound. Volume Control : MAX. Squelch Control : CCW	1) Defective speaker or headphone jack: ● Replace the defective parts. 2) Defective audio amplifier IC-9 and/or associated circuit components: ● Replace the defective parts. 3) Defective IF amplifier IC-2 and/or associated circuit components: ● Replace the defective parts. 4) Defective functional squelch control IC-3, IC-5 and/or associated circuit components: ● Replace the defective parts.
3) Sound but display does not light. Volume Control : MAX. Squelch Control : CCW	1) IC-11 is running "wild": ● Activate Reset Switch. 2) Defective initiate control and/or associated circuit components: ● Replace the defective parts. 3) Defective IC-4 and/or associated circuit components: ● Replace the defective parts. 4) Defective DC-DC converter circuit components: ● Replace the defective parts. 5) Defective LCD: ● Replace. 6) Defective CPU IC-11 and/or associated circuit components: ● Replace the defective parts. 7) Defective Q18, 19, D26 and/or associated circuit components: ● Replace the defective parts. 8) Defective EL1 and/or associated circuit components: ● Replace the defective parts.
4) Does not scan and squelch does not operate.	1) Defective functional squelch control IC-5, Q17 and/or associated circuit components: ● Replace the defective parts. 2) Defective IC-2 and/or associated circuit components: ● Replace the defective parts. 3) Defective IC-4 and/or associated circuit components: ● Replace the defective parts.
5) Does not scan but squelch operates.	1) Defective Q17, IC-5 and/or associated circuit components: ● Replace the defective parts. 2) IC-11 is running "wild": ● Replace Reset Switch. 3) Defective IC-11 and/or associated circuit components: ● Replace the defective parts.
6) Scan does not operate but MANUAL selector operates.	Squelch control is not adjusted correctly: ● Adjust SQUELCH (VR-1) clockwise.

Symptom	Cause/Remedy
7) Display lights but PROGRAM does not operate.	Defective Keyboard or connector and/or associated circuit components: ● Replace the defective parts.
8) Low (Mid) band does not operate but Air, High and UHF operates.	1) Defective Low band RF Coils T-3, 6 and/or VCO circuit components: ● Replace the defective parts. 2) Defective band switch circuit components: ● Replace the defective parts.
9) Air band does not operate but Low, High and UHF operate.	Defective AM IF Amp Q15, 16 and/or associated circuit components: ● Replace the defective parts.
10) High band does not operate but Low and UHF operate.	1) Defective Air and High band RF Coils T1,2,4,5 and/or associated circuit components: ● Replace the defective parts. 2) Defective band switch circuit components: ● Replace the defective parts.
11) UHF band does not operate but Air, High and Low operate.	1) Defective UHF band RF amplifier Q4, mixer Q5, multiplier and/or associated circuit components: ● Replace the defective parts. 2) Defective band switch circuit components: ● Replace the defective parts.
12) Air, High and UHF band do not operate but Low operates.	Defective VCO circuit Q8, D16 and/or associated circuit components: ● Replace the defective parts.
13) All bands do not operate but display OK.	1) Defective PLL circuit IC1, 7 and/or associated circuit components: ● Replace the defective parts. 2) Defective IC-4 and/or associated circuit components: ● Replace the defective parts.
14) Searches but does not halt on the correct frequency.	1) Defective Q21, IC-6 and/or associated circuit components: ● Replace the defective parts. 2) Discriminator Coil T10 is out of adjustment: ● TP3 shall have 1/2 VCC (approx. 2.8V) in normal receiving mode. 3) Is 50.700 MHz adjusted correctly?: ● Refer to page 9 REFERENCE FREQUENCY OSC ALIGNMENT.

ELECTRICAL PARTS LIST

PRODUCT SAFETY NOTE: Products marked with a Δ have special characteristics important to safety.
Before replacing any of these components, read carefully the product safety notice of this service manual.
Don't degrade the safety of the product through improper servicing.

DISASSEMBLY/EXPLODED VIEW

- ① Remove two screws **A** and detach the Bracket (23).
- ② Remove four screws **B**.
- ③ Remove two screws **C** and two washers **D**.
- ④ Detach the top and bottom cabinet. Use care not to damage speaker leads connected to the top cabinet.

The diagram illustrates the 74LS164 8-stage shift register. On the left, a pin diagram shows a 16-pin package with the following connections: STROBE (pin 1), DATA (pin 2), CLOCK (pin 3), Q1 (pin 4), Q2 (pin 5), Q3 (pin 6), Q4 (pin 7), Vss (pin 8), VDD (pin 16), OUTPUT ENABLE (pin 15), Q5 (pin 14), Q6 (pin 13), Q7 (pin 12), Q8 (pin 11), Qs (pin 10), and Qs (pin 9). On the right, a block diagram shows the internal structure, including an 8-stage shift register, a strobe input, an output enable input, and 3-state buffers for the parallel outputs Q1 through Q8.

APPENDIX

VHF-MID Band Alignment for European/Australian models

CIRCUIT REVISION

1. The following parts should be changed.

Ref. No.	Low band	Mid band
L17	Not used	4LN-092
T3	GR-N5341	GR-N791
T6	GR-N5341	GR-N791
R189	Not used	47k Ω
C11	0.001 μ F	56pF
C19	0.001 μ F	56pF
C39	0.001 μ F	100pF
C41	56pF	22pF
C42	22pF	10pF

Ref. No.	Low band	Mid band
C169	Not used	18pF
C170	Not used	56pF
D15	BB329	Not used
D59	Not used	BB329
T14	Z1739	Z1882

2. D45 changed to IC11 Pin 66 from IC11 Pin 65.

3. R112 changed to IC8 Pin 5 from IC8 Pin 4.

VCO ALIGNMENT

Step 1: Connect a DC SSVM to TP5 and ground.

Step 2: Program CH1, 2 and 3 as follows:

CH1 (68 MHz), CH2 (78 MHz), CH3 (88 MHz)

Step 3: Select channel 3 (88 MHz) and adjust TC3 for 11.0V on the DC SSVM.

Step 4: Select channel 1 (68 MHz) and adjust T7 for 1.5V on the DC SSVM.

Step 5: Repeat steps 3 and 4 until no improvement is observed.

The DC SSVM should show as below.

68 MHz	Voltage of TP5	1.5V
78 MHz	Voltage of TP5	4.7V
88 MHz	Voltage of TP5	11.0V

RF AMP ALIGNMENT

Step 1: Connect instruments as shown below.

Step 2: Program 68 MHz (CH1), 78 MHz (CH2), 88 MHz (CH3).

Step 3: Select Channel 1 (68 MHz) and adjust T3 and T6 for maximum RF waveform.

Step 4: Check the Channels 1 ~ 3 one by one for maximum RF waveform.

Slight deviation as shown below is acceptable.
