

The HT-REVERB can take you from your room to an arena via hall, plate, spring, gate and reverse reverb effects. Valve compression and harmonics are added using the Dwell control, and you can switch the reverb time from short to long while you are playing.

Specification

- 8 reverb effects
- Genuine valve design
- Operates at 300V HT
- Unique Dwell control
- Manual and Short Long modes
- Stereo
- Unique switching operation
- High integrity buffered bypass
- Power supply included
- Silent switching

Two Modes

Manual and Short/Long modes for maximum playing flexibility

Manual Mode

The Time control sets reverb decay length. (Note: the footswitch is inactive and the LED off)

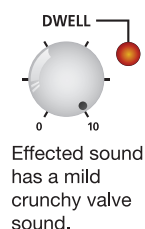

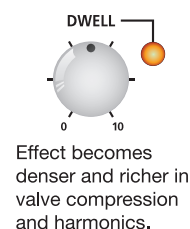

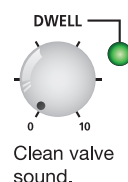

Short/Long Mode

The footswitch toggles between preset short (LED green) and long (LED red) times for live flexibility.

STONE TIP: to change mode simply hold down the MODE footswitch for 1 second.

Dwell

By adjusting the drive to the high voltage valve circuit in the effect side chain, the Dwell control affects the amount of valve compression and harmonics present in the effect.
