## 1 Application

The VRF Dx-coil Interface(DDC type) enables BMS capacity demand control of Toshiba Outdoor units connected to a DX COIL (with a field supplied AHU). It is compatible with either a Toshiba VRF system.

Product	Model name	Capacity	HP
Dx-coil controller	TCB-IFDDC201E	22.4kW , 28.0kW , 45.0kW , 50.4kW , 56.0kW 90kW, 101kW, 112kW	8 , 10 , 16 , 18 , 20 32, 36, 40
Dx-valve kit	RBM-A101VAE	22.4kW , 28.0kW	8 , 10
	RBM-A201VAE	45.0kW , 50.4kW , 56.0kW	16 , 18 , 20

## 2 System compatibility, Overview

- Outdoor Unit
  - SMMS-e Cooling Only Model (MMY-MAP\*\*\*6T8\*P\* / MMY-MAP\*\*\*6T7\*P)
  - SMMS-7 Cooling Only Model (MMY-MAP\*\*\*7T8\*P\* / MMY-MAP\*\*\*7T7\*P)
  - SMMS-e Heat Pump Model (MMY-MAP\*\*\*6HT8\*P\* / MMY-MAP\*\*\*6HT7\*P\*)
  - SMMS-u Heat Pump Model (MMY-MUP\*\*\*1HT8\*P\* / MMY-MUP\*\*\*1HT7\*P\*) \*
  - SMMS $\infty$  Cooling Only Model (MMY-MUP\*\*\*1T8\*P\* / MMY-MUP\*\*\*1T7\*P\*) \*
- \* : Even if connected with SMMS $\infty$ , SMMS-u Heat Pump Model, the system communication type will become "TCC-Link" according to Dx-coil controller(TCB-IFD2A201E, TCC-Link type).
- Diversity
  - 75% - 100%
- Overview

## 3 Operating conditions

AHU	Ensure the "Coil on Air" temperature is within the range of the Dx-coil design guideline.

	Note: If intake air temperature is out of range of the specification, the damage for the system may be caused.															

Outdoor unit	Refer to specification of outdoor unit
--------------	--

#### 4 Pipe Size

Outdoor Unit Capacity	Pipe diameter		
	Gas Pipe	Liquid Pipe Valve kit to AHU	Liquid Pipe Valve kit to Y-Joint
8 HP	Ø 19.1 or 22.2	Ø 12.7	-
10 HP	Ø 22.2	Ø 12.7	
16 HP	Ø 28.6	Ø 15.9	
18 HP	Ø 28.6	Ø 15.9	
20 HP	Ø 28.6	Ø 15.9	
32 HP	Ø 34.9	Ø 15.9	Ø 19.1
More than 36HP	Ø 41.3(38.1※1)	Ø 15.9	Ø 22.2

※ 1 Only SMMS-u, SMMS<sup>∞</sup>

#### 5 Pipe length and height difference

Main pipe equivalent length		Same as piping length restriction of VRF ODU
Total piping length (real length )		120 m (100 m)
Furthest equivalent pipe length L (real length)		100m
Furthest equivalent pipe length between outdoor unit		-
Max. Height	outdoor unit - indoor unit(Upper outdoor unit)	40m
Difference	outdoor unit - indoor unit(Lower outdoor unit)	
Amount of Additional Refrigerant		Refer to specification of Outdoor unit

#### 6 Product Configuration

##### 6.1 Product Configuration

DX COIL tyoe		Normal		
Type		Dx-coil Controller	Dx-Valve kit	
Model Name		TCB- IFDDC201E	RBM- A101VAE	RBM- A201VAE
Connectable Dx-coil Capacity	8HP	1	1	-
	10HP	1	1	-
	16HP	1	-	1
	18HP	1	-	1
	20HP	1	-	1
	32HP	1	-	2
	36HP	1	-	2
	40HP	1	-	2

## 6.2 Major Specifications

### TCB-IFDDC201E (Dx-coil Controller)

Description	Dx-coil controller in Metal Enclosure, comprising:- <ul style="list-style-type: none"><li>• MCC-1570 (Main Indoor(DX) P.C. board)</li><li>• TX-TOS1413 (DDC(0-10V) interface P.C. board)</li><li>• 24VAC Transformer</li><li>• TA Sensor, Length : 2.5m, Connector colour : Yellow</li><li>• TC1 Sensor, Length : 2.5m, Connector colour : Brown</li><li>• TC2 Sensor, Length : 2.5m, Connector colour : Black</li><li>• TCJ Sensor, Length : 2.5m, Connector colour : Red</li><li>• Strainers</li></ul>							
External Dimensions H x W x D (mm)					420 x 330 x 95			
Net Weight(kg)	6.0 kg							
Notes:								
Capacity code (DN11) needs to be setup upon installation using wired remote controller (not supplied).								
HP	8	10	16	18	20	32	36	40
DN[11]	21	23	26	27	28	35	37	39
<ul style="list-style-type: none"><li>• Only Heating and Cooling Modes are available on the TCB-IFDDC201E (No Automatic or Fan Only).</li><li>• Components supplied loose, requires brazing and local pipework.</li></ul>								

### RBM-A101VAE / RBM-A201VAE (Dx-valve kit)

Description	The PMV(Pulse Motor Valve, 2 models), comprising:- <ul style="list-style-type: none"> <li>PMV body &amp; PMV Motor</li> <li>Terminal Block</li> </ul>
RBM-A101VAE	8HP & 10HP Size
RBM-A201VAE	16HP & 18HP & 20HP Size

## 6.3 Control Input / Output Details

- Input functions -

Input	Name	Description
A1 A2	Capacity Demand	Analogue Input to control Capacity demand. (Details in section 6.4).
	Analog Input (DC 0 - 10 V)	
	SW3 bit-2(TX-TOS1413) OFF	STEPPED response to analogue input
	SW3 bit-2(TX-TOS1413) ON	LINEAR response to analogue input
	<ul style="list-style-type: none"> <li>To ease the integration of the Dx-coil with the DDC the capacity control is able to operate with a STEPPED or LINEAR function from the analogue input.</li> <li>To select either a STEPPED(default) or LINEAR response, from the analogue input, use SW03 bit2 located on the DDC(0-10V) interface P.C. board(TX-TOS1413)</li> </ul>	
C1 C2	External ON / OFF Input	Digital Input to control ON / OFF:- <ul style="list-style-type: none"> <li>ON (Closed) / OFF (Open).</li> </ul> External ON/OFF input signal type(pulse / static) is selectable by <b>Jumper Wire J01</b> on the Indoor(DX) P.C. board - MCC-1570. <ul style="list-style-type: none"> <li>Connect (Default) : Pulse / Cut : Static</li> </ul> Note the unit will not operate until there is an appropriate 0-10V Capacity Control signal.
C3 C4	Demand Signal Input	When signal input, AHU is in "thermostat-off" status forcibly.
C5 C6	Safety contact.	If this contact is open for more than 1 minute, the check code "P10" is generated and the Dx-coil controller switches off automatically.
C7 C8	Fan Motor Trouble Input	An AHU fan operation monitor (Field supply), could be attached at this dry contact terminal(For example, the abnormality of the fan motor.). A closed contact generates the check code "L30".
C23 C24	Operation Mode Input	Digital Input to control Mode:- <ul style="list-style-type: none"> <li>HEAT (Closed) / COOL (Open)</li> </ul>

- Output functions -

Output	Name	Description																
D1 D2	Fan Motor Digital Output	A fan control signal is output. It is usually the ON output at the time of operating, but it is the OFF output in defrosting.																
D5 D6	Alarm Active Digital Output	During Alarm operation, Alarm Active Digital Output is active.																
D7 D8	Defrost Mode Digital Output	During Defrost operation, Defrost Mode Output is active.																
D19 D20	Thermostat On Digital Output	Thermostat ON signal is output. It is usually the ON output at the time of operating.																
D31 D32	DO_1 Digital Output1 (User Defined)	Output function set using rotary switch "SW1" on the DDC(0-10V) interface P.C board(TX-TOS1413) <table><tr><td>SW1</td><td>Output function</td></tr><tr><td>0</td><td>lower than capacity demand</td></tr><tr><td>1</td><td>higher than capacity command</td></tr><tr><td>2</td><td>cooling oil recovery /heating refrigerant recovery</td></tr><tr><td>3</td><td>cooling output (operation+no error+cooling mode)</td></tr><tr><td>4</td><td>heating output (operation+no error+heating mode)</td></tr><tr><td>5</td><td>Thermostat ON</td></tr><tr><td>6 ~ F</td><td>No function (for future development)</td></tr></table>	SW1	Output function	0	lower than capacity demand	1	higher than capacity command	2	cooling oil recovery /heating refrigerant recovery	3	cooling output (operation+no error+cooling mode)	4	heating output (operation+no error+heating mode)	5	Thermostat ON	6 ~ F	No function (for future development)
SW1	Output function																	
0	lower than capacity demand																	
1	higher than capacity command																	
2	cooling oil recovery /heating refrigerant recovery																	
3	cooling output (operation+no error+cooling mode)																	
4	heating output (operation+no error+heating mode)																	
5	Thermostat ON																	
6 ~ F	No function (for future development)																	
D33 D34	DO_2 Digital Output2 (User Defined)	Output function set using rotary switch "SW2" on the DDC(0-10V) interface P.C board(TX-TOS1413) <table><tr><td>SW2</td><td>Output function</td></tr><tr><td>0</td><td>lower than capacity demand</td></tr><tr><td>1</td><td>higher than capacity command</td></tr><tr><td>2</td><td>cooling oil recovery /heating refrigerant recovery</td></tr><tr><td>3</td><td>cooling output (operation+no error+cooling mode)</td></tr><tr><td>4</td><td>heating output (operation+no error+heating mode)</td></tr><tr><td>5</td><td>Thermostat ON</td></tr><tr><td>6 ~ F</td><td>No function (for future development)</td></tr></table>	SW2	Output function	0	lower than capacity demand	1	higher than capacity command	2	cooling oil recovery /heating refrigerant recovery	3	cooling output (operation+no error+cooling mode)	4	heating output (operation+no error+heating mode)	5	Thermostat ON	6 ~ F	No function (for future development)
SW2	Output function																	
0	lower than capacity demand																	
1	higher than capacity command																	
2	cooling oil recovery /heating refrigerant recovery																	
3	cooling output (operation+no error+cooling mode)																	
4	heating output (operation+no error+heating mode)																	
5	Thermostat ON																	
6 ~ F	No function (for future development)																	

- Summary of Digital input / output function (MCC-1570) -

Connector	Pin	Function	Remarks	Standard / Option	Terminal blocks
CN32 (WHI)	1	COM (DC 12V)	---	---	---
	2	Output	Ventilation control (Refer to "APPLICATION CONTROL MANUAL")	Option	---
CN34 (RED)	1	Safety Contact	Check code P10, Normal close	---	C5
	2	---	---	---	---
	3	Input (DC 12V)	---	Standard	C6
CN60 (WHI)	1	COM (DC 12V)	---	---	D1 / D7
	2	Defrost mode Digital output	ON while outdoor unit defrosted	Standard	D8
	3	---	---	---	---
	4	---	---	---	---
	5	---	---	---	---
	6	Fan motor active Digital output	ON while Fan on	Standard	D2
CN61 (YEL)	1	External ON/OFF Input, Input (DC 5V)	Start/Stop input, Input signal type (pulse / static) is selectable by Jumper Wire J01	Standard	C1
	2	COM (0V) for pin 1, 3	---	---	C2
	3	---	---	---	---
	4	---	---	---	---
	5	COM (DC 12V) for pin 4, 6	---	---	D5
	6	Alarm Active Digital Output	ON while Alarm ON	Standard	D6
CN70 (WHI)	1	Option	Option error input (Refer to "APPLICATION CONTROL MANUAL")	Option	---
	2	COM (0V)	---	---	---
CN73 (RED)	1	COM (0V)	---	---	C3
	2	Demand signal Input, Input (DC 5V)	Forced thermo-OFF input	Standard	C4
CN80 (GRN)	1	Input (DC 12V)	---	---	C7
	2	---	---	---	---
	3	Fan Motor Trouble Input	Error input from outside (interlock, the check code L30)	Standard	C8
CN82 (BLU)	1	---	---	---	---
	2	---	---	---	---
	3	Thermostat On Digital Output	Signal output during thermo-ON	Standard	D19
	4	---	---	---	---

	12	PMV② DC12V(BRN)	RBM-A201VAE does not include	Standard	BR_Dx-valve kit 2
	13 ~ 20	---	---	---	---

## 6.4 Analogue Input Control Details

- Capacity Demand signal (analogue input voltage) will be used as the main control value for the compressor frequency.
- The control of capacity may not be able to be performed according to the state of an air-conditioner (During oil recover control, defrost etc.).

### 1) Demand 0-10V STEPPED control (SW3 bit-2 on the DDC(0-10V) interface P.C board(TX-TOS1413) "OFF")

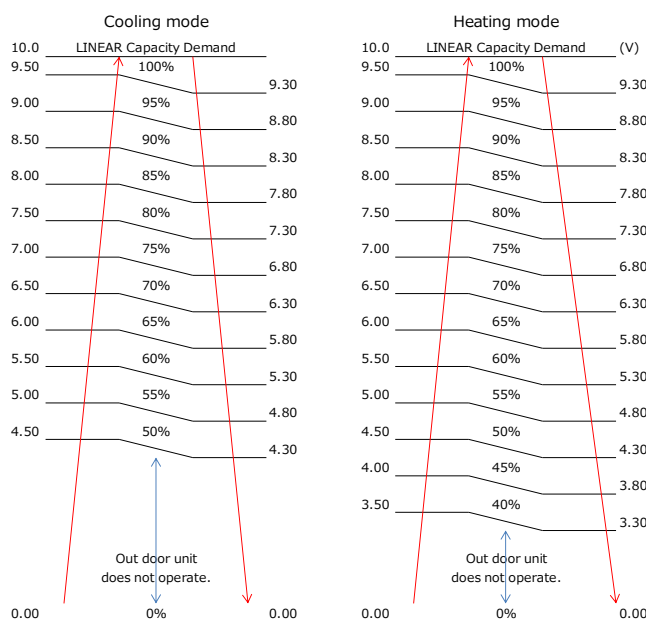

#### ▼ When connected to SMMS-e,7

#### ▼ When connected to SMMS-u,∞

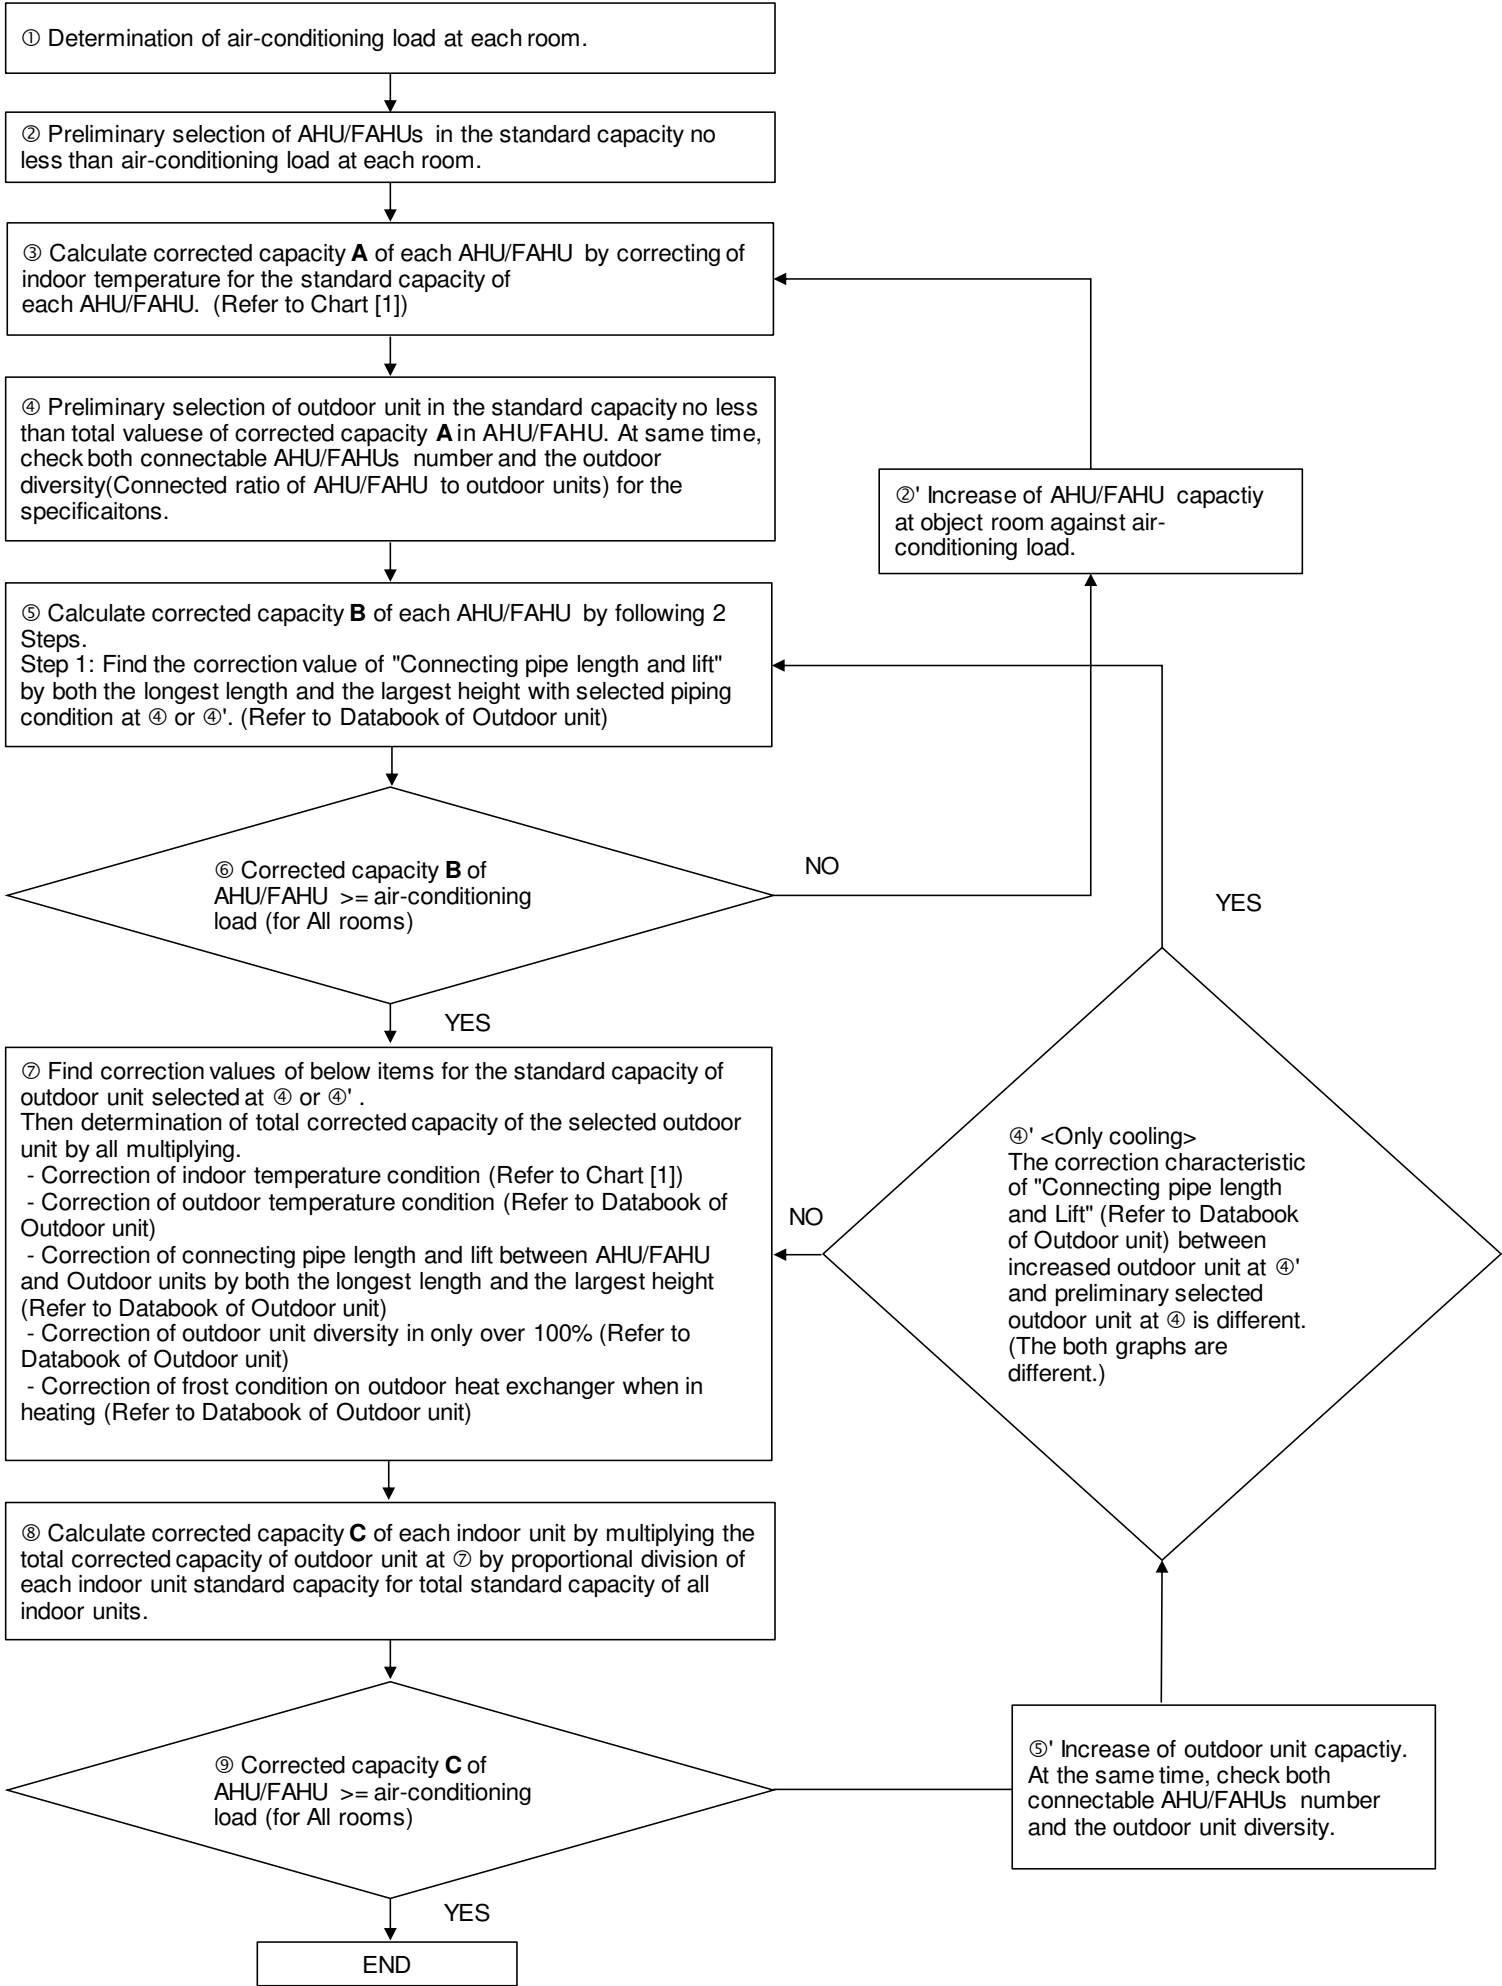

### 2) Demand 0-10V LINEAR control (SW3 bit-2 on the DDC(0-10V) interface P.C board(TX-TOS1413) "ON")

7.1 Equipment selection procedure -Selection flow chart-

7.2 Correction charts for Outdoor unit capacity calculation

[1] Coil on Air temperature vs. capacity correction value

▼ Cooling

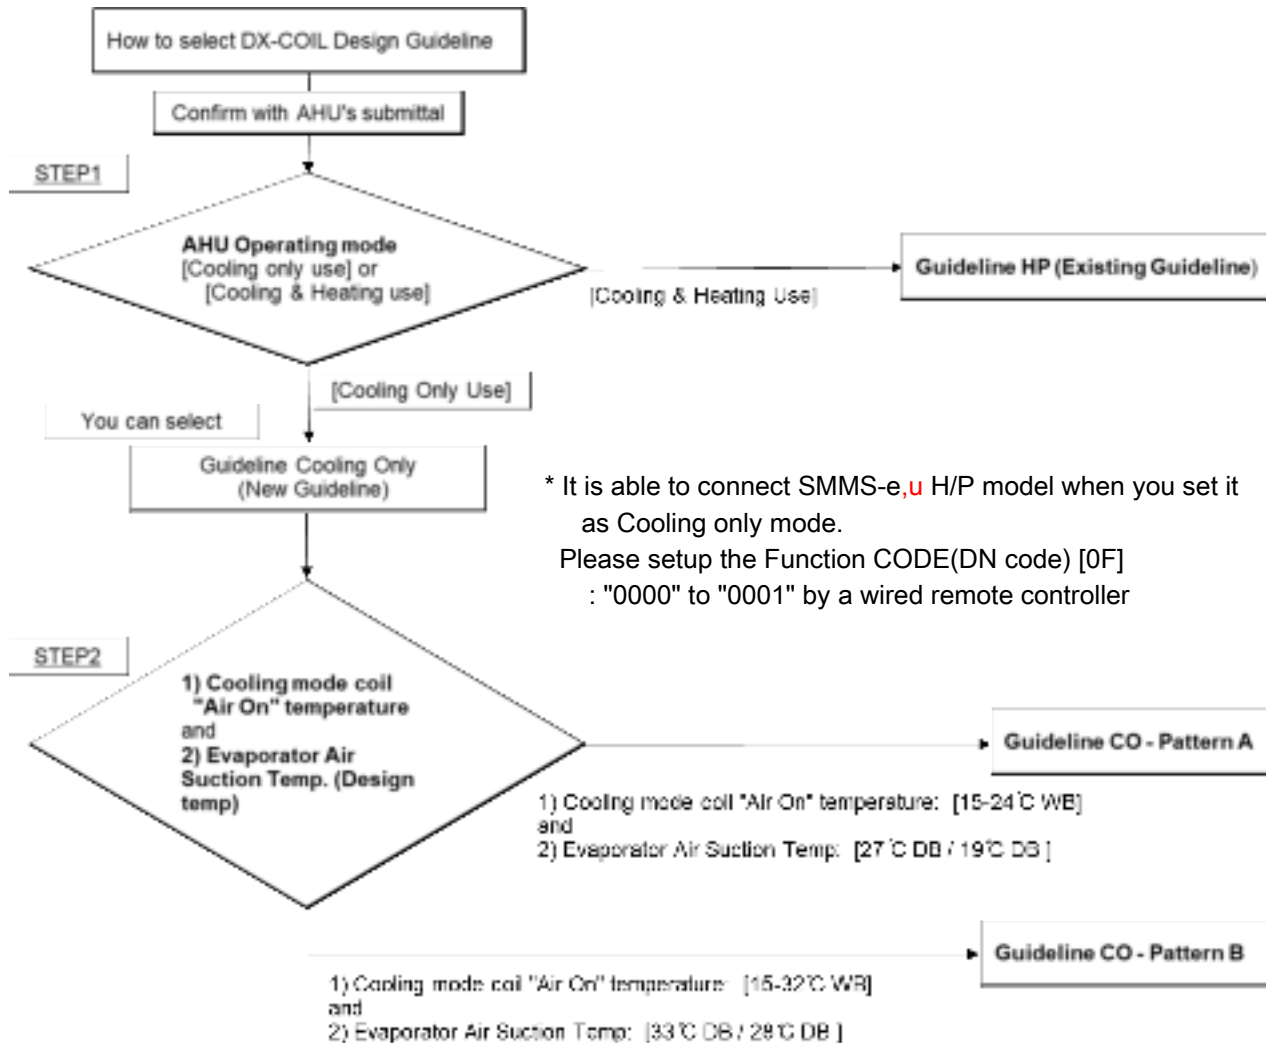

The above capacity values are generated depends on each compressor operation level.

▼ Heating

### 7.3 How to select DX COIL Design Guideline

#### AHU / DX COIL Design Notes:

Cooling & Heating output figures are based on calculations and 'general' test data. All figures are to be taken as approximations. The properties of the 3rd Party DX COIL will have an effect on the performance of Outdoor units.

- For the AHU/DX COIL prepared on site, please design with referring to submittal of AHU.
- The DX COIL must be suitable for R410A.
- The design should allow operation an Evaporator and a Condenser depends on selected usage.  
(Features: Multiple circuits / Liquid Capillary Distributor / Gas Header)
- The counter flow principle must be observed for the DX COIL design.
- A Drain Pan must be fitted (even if only used in Heat mode) due to defrost cycles.

## 7.4 DX COIL Guideline HP

### - Guideline HP -

\* It is able to connect SMMS-e H/P model when you set it as Cooling only mode.

Please setup the Function CODE(DN code) [0F] : "0000" to "0001" by a wired remote controller

### 7.7 DX COIL Manufacturing

<ul style="list-style-type: none"><li>• DX COIL &amp; Pipework Design Pressure: 4.15MPa</li><li>• DX COIL &amp; Pipework Burst Pressure (withstand): 12.45MPa (more than 3 x Design Pressure)</li></ul>						
<p>DX COIL Contamination:</p> <ul style="list-style-type: none"><li>• Ensure the DX COIL is cleaned, using detergent, after manufacture to remove contaminants from the coil</li><li>• Do not use chlorinated detergent during the cleaning process</li><li>• Do not leave flux on or inside the DX COIL</li></ul>						
<p>DX COIL &amp; Pipework Contamination (Allowable Limits):</p> <table><tr><td>Residual water amount</td><td>0.6 mg / m</td></tr><tr><td>Residual oil amount</td><td>0.5 mg / m</td></tr><tr><td>Amount of solid contaminants</td><td>1.8 mg / m</td></tr></table> <ul style="list-style-type: none"><li>• DX COIL contaminants must be equal to or less than the values shown above. The allowable contaminant levels shown assumes Ø9.52mm copper tube has been used for the manufacture of the DX COIL</li></ul>	Residual water amount	0.6 mg / m	Residual oil amount	0.5 mg / m	Amount of solid contaminants	1.8 mg / m
Residual water amount	0.6 mg / m					
Residual oil amount	0.5 mg / m					
Amount of solid contaminants	1.8 mg / m					

### 7.8 DX Controller Installation

Installation Site	<p>Avoid Direct Sunlight. DO NOT install outside. Avoid locations exposed to steam or oil vapours. Avoid locations where combustible gas may leak, settle or be generated. Avoid installation near machines emitting high-frequency waves. Avoid places where acidic solutions are frequently used. Avoid places where sulphur based or other sprays are frequently used. Avoid places where vibrations may occur. Standard Rating ; IP21</p>
Notes	To avoid damage; when making holes for cable glands, please first remove the Gland Plate from the DX Coil CONTROLLER
Ambient Temperature	0°C to 40°C
Ambient Humidity	<p>Relative humidity 10 ~ 90% (or less). No dew condensation allowed. If the DX-Controller is to be installed where dew condensation could form, locally sourced insulation should be fitted to avoid condensation.</p>
Installation Angle	Vertical Installation

## 7.9 Sensor Connections

Installation	<p>Sensor holders MUST be brazed to the DX COIL to ensure reliable temperature sensing. Follow the information in the Dx-coil controller Installation Manual for details.</p>
Wire Connections	<p>TC1, TC2, TC and TA which have a 2.5m cable are combined in the Dx-coil controller. If these Sensors are removed during installation ensure the sensors are reconnected to the Dx-coil Controller main PCB (MCC-1570) as shown below:</p> <ul style="list-style-type: none"> <li>• TC1 Sensor (BRN Plug [2 Pin]) &gt; MCC-1570 CN103 (BROWN Socket [2 Pin])</li> <li>• TC2 Sensor (BLK Plug [2 Pin]) &gt; MCC-1570 CN101 (BLK Socket [2 Pin])</li> <li>• TC3 Sensor (RED Plug [2 Pin]) &gt; MCC-1570 CN102 (RED Socket [2 Pin])</li> <li>• TA Sensor (YEL Plug [2 Pin]) &gt; MCC-1570 CN104 (YEL Socket [2 Pin])</li> </ul> <p>Take care to re-connect them correctly. The cables should be installed with a U-bend at Sensor ends to stop water dripping into components.</p> <p>The sensor cables vinyl tube can withstand up to 105°C be careful to keep clear of high temperature parts. The extension cables' connectors are not IP rated. Ensure that they are located within the AHU.</p> <p>If these Sensors needs to extend, following the below cable specification(locally sourced):</p> <ul style="list-style-type: none"> <li>• Cable Specification : VFF, 0.2-0.5 mm<sup>2</sup></li> <li>• Available Extension Length(m) : Max. 10m (Total : 12.5m)</li> </ul> <p>Take care to connect them correctly and carefully handle and prepare the extend cable to prevent getting such as electrical noise, water and dust.</p>
TA Sensor position	<p>The TA sensor which is combined in the Dx-coil controller must be located right position for TOSHIBA control, not demand control. The cooling/heating demand is determined from the DDC. Following the below example picture;</p> <p>1. Fresh Air Only</p>  <p>2. Outdoor Air(Fresh Air) mixed with Return Air</p>  <p>3. Outdoor Air(Fresh Air) mixed with Return Air by Heat Recovery Exchanger</p> 

## 7.10 Dx-valve KIT Installation

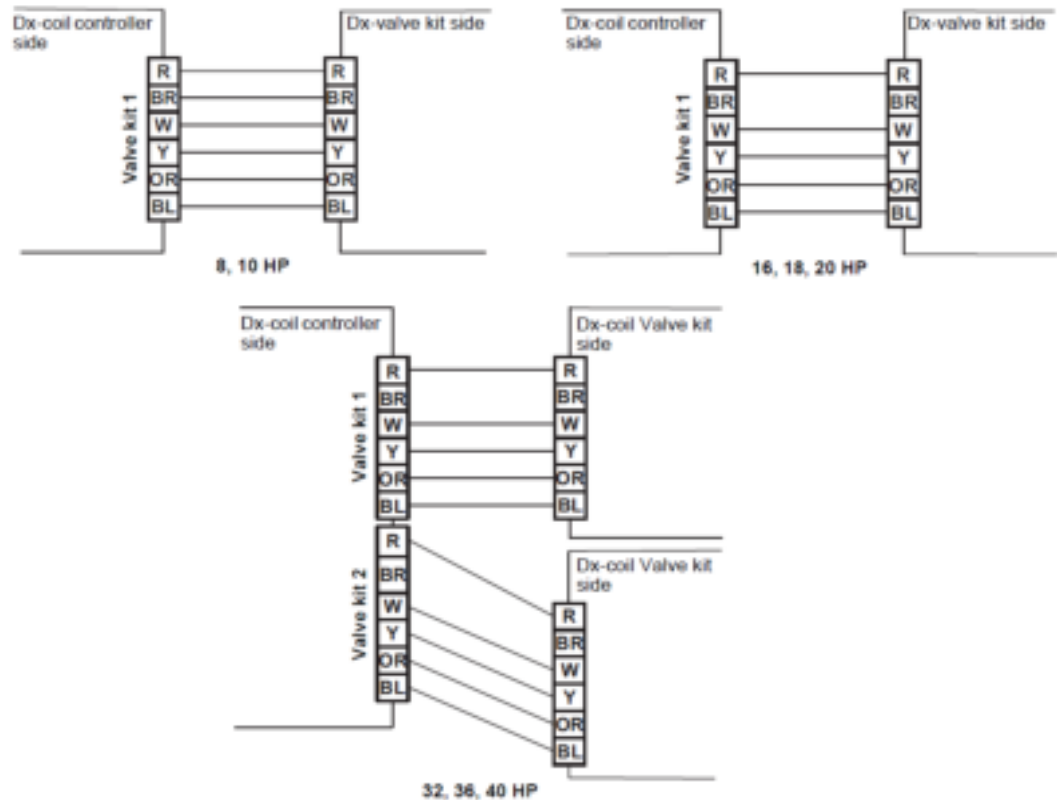

Installation	Avoid locations in direct sunlight. Standard Rating ; IP21
Environment	Insulation should be fitted to Dx-valve kit (locally sourced). Ideally the Dx-valve kit should be contained within the AHU. If installed outside, a cover (locally sourced) should be fitted to protect from wind and rain in addition to Insulation.
Installation	The supplied components need to be assembled on to the DX COIL using custom locally sourced pipework. The PMV (Pulse Motor Valve) must be NOT installed upside down (PMV Motor on bottom). The connection angle between PMV body and PMV Motor is fixed at the factory (using thread lock) and should not be changed. The PMV Motor should not be removed from PMV body. Carefully handle and prepare the PMV when fitting to prevent ingress from foreign matter such as dust or water.
Brazing	<ul style="list-style-type: none"> <li>• <b>PMV</b> <p>A) Whilst brazing, the PMV body and PMV Motor must be water cooled to keep the component's temperature does not exceed 120°C.</p> <p>B) Whilst brazing, nitrogen gas must flow through the PMV body and pipework to prevent internal oxidization.</p> <p>C) Prevent cooling water from getting inside the PMV body and connector of the lead during brazing.</p> <p>D) Take care not to damage the PMV cables during brazing.</p> </li> <li>• <b>Sensor holders</b> <ul style="list-style-type: none"> <li>• To ensure reliable operation, all Sensor holders must be filled by brazing.</li> <li>• Be careful of that the brazing material does not enter into the sensor holder when attaching the TC1, TC2 and TCJ sensor holder.</li> </ul> <p><u>TC1 Sensor</u> : Install it in the collecting part of the gas header. Braze the TC1 sensor on the location of the lowerside 45 ° to detect the stable temperature.</p> <p><u>TC2 Sensor</u> : Install it in the between the liquid pipe distributor and the PMV. (TC2 sensor is attached to the refrigerant cycle of AHU.)</p> <p><u>TCJ Sensor</u> : Install it in the pass where the temperature of the capillary tube is the lowest. If the TC1, TC2 or TCJ sensors are easy to be subjected to the surrounding thermal effect, cover them with the heat insulator material, and fix them with the fixing band</p> <p><b><u>TC1, TC2 and TCJ sensor position on DX COIL</u></b></p> </li> </ul>

Gas pipe

## Wire Connections

- Connect the cable from the PMV. Match the color of the wiring of the PMV side and the controller side.
- The PMV cable is supplied at the maximum permissible length of 5m. However, following the below cable specification, it can be extended at the maximum permissible length of 12.5m.
  - Cable Specification : UL1007 AWG #26

## 8 Control Outline

### 8.1 Cautions regard with DDC's programing

#### (1) Operation Start

- Capacity Demand signal(analogue input voltage) should be output after the AHU's fan operating. Then, recommend to keep more than 50%(Heating; 40%) Capacity Demand signal during 5mins.
- To protect the compressor, for 5 mins after operation start the compressor will continue to operate even if receives "Zero" demand signal.

#### (2) Freeze prevention control (Low temperature release)

- When the compressor(s) stopped by Freeze prevention control, it will re-start after maximum 20 mins depends on DX-COIL condition.

#### (3) Recovery control

- Cooling oil(refrigerant) recovery operation duration is approx. 2 to 5 mins and normally takes place every 2 hrs.
- Heating refrigerant (oil) recovery operation duration is 2 to 10 mins and normally takes place every 1 hr.

#### (4) Defrost control (Full Defrost)

- The defrost operation terminates based on TE1 & TE2, and re-occur every 55 mins.  
(Just after start-up or upon changeover from cooling to heating, the target cumulative duration is 25 mins.)
- The defrost operation takes maximum 10 mins.

#### (5) Compressor restart prevention timer

- If the compressor(s) is stopped by Capacity Demand or protection function(except Freeze prevention control), normally the compressor will continue to stop for 2 mins 30 secs, even if receives Capacity Demand signal.

## 8.2 Protection Function Summary

- Protection Controls varies by Outdoor unit, please see appropriate Outdoor unit service manual for full details (Below "Protection Function Summary" is according to SMMS-e.)

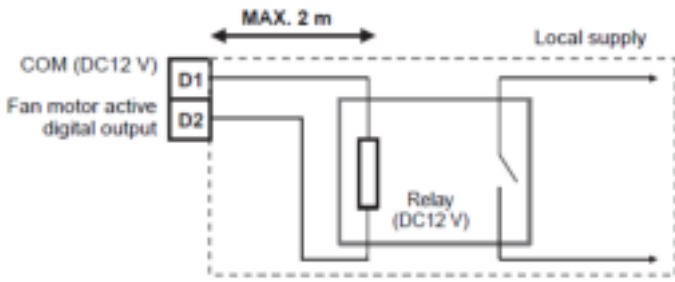

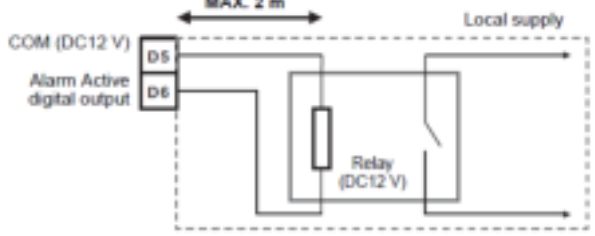

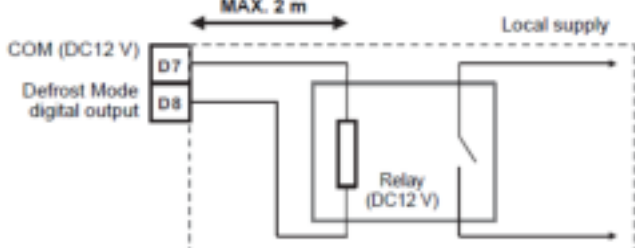

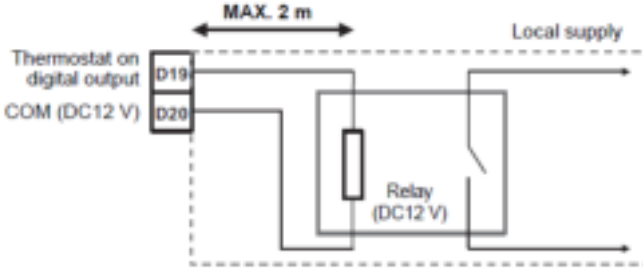

Function	Summary
Freeze prevention control (Low temperature release)	In Cooling Mode prevents low DX-COIL temperatures by controlling compressor speed (based on TC1/TC2/TCJ sensor temperature).
Cooling oil (refrigerant) recovery control	This control periodically increases flow-rate to ensure refrigerant oil does not build up in inter-unit gas pipes (which can occur when operating command is inadequate, or while cooling is progressed under low ambient conditions). During this control the compressors are operated at a target speed, and Dx valve kit PMV is opened to a certain degree. Upon completion of recovery control normal Cooling operation resumes.
Heating refrigerant (oil) recovery control (Heating Start up Control)	This control periodically increases flow-rate to ensure liquid refrigerant trapped inside the DX COIL. It also serves the purpose of recovering DX COIL / Outdoor refrigerant after defrosting and recovering oil present in outdoor heat exchangers during heating overload operation. During this control the compressors are operated at a target speed, and Dx valve kit PMV is opened to a certain degree. Upon completion of recovery control normal Heating operation resumes. Recovery operation normally takes place after defrosting.
Defrost control (Full Defrost)	In Heating mode a defrost operation can be performed to reduce ice build-up on the Outdoor unit (based on TE1 & TE2 sensor). During Defrosting the refrigerant cycle is reversed temporarily cooling the DX COIL. The defrost operation terminates based on TE1 & TE2, and can re-occur every 55 mins. While the outdoor unit is Defrosting the Dx valve kit PMV is opened to a certain degree. Heating Recovery operation normally takes place after defrosting.
High Pressure release control	This control can perform a staged shutdown of the compressors based on PD sensor value and P0 limit:- When $P_d \geq P_{01}$ compressor No. 2 (the last one of two compressors in terms of startup order in a two compressor configuration) is shut down. When $P_d \geq P_{02}$ compressor No.1 (the first compressor in terms of startup order) is shut down. The compressor(s) will automatically re-start after 2 mins 30 secs. <Heating : P01"3.45MPa" , P02"3.5MPa" > <Cooling : P01"3.85" , P02"3.9MPa">
Case Heater control	There are 2 types of case heaters: a compressor case heater and an accumulator case heater. This control function is aimed at preventing the accumulation of refrigerant in those cases, and is performed by all outdoor units. If the power supply has not been turned on for a specified period before a post installation test run, compressor failure may occur. Similarly, when starting compressors after a long period of no power supply, it is recommended that the power supply be turned on for a while before operation is resumed, just like a post-installation test run.
A3-IPDU control (A3-IPDU = Inverter P.C. board for compressor )	1) Current Release Control To prevent inverter input current from exceeding the specified value, output frequency is controlled with AC input current as detected by T02 mounted on the control P.C. board. 2) Heat sink temperature detection control This control function is aimed at protecting IPM from overheating via a thermistor. This control can increase outdoor fan speed and shutdown the compressors. This control can stop the compressor, which will automatically re-start after 2 mins 30 secs. If the detection is repeated 4 times the unit will not re-start (error code P07). 3) Overcurrent protection When the overcurrent protection circuit on IPDU PCB detects an abnormal current the compressor is shutdown. The compressor is re-started after 2 min 30 secs and the error count is recorded. If the compressor operates for at least 10 mins the error count is cleared. If the detection is repeated 8 times the error is confirmed as final. 4) High Pressure SW control When high pressure switch is activated the compressor is stopped, which will automatically re-start after 2 mins 30 secs. If the detection is repeated 4 times the unit will not re-start (error check code : P04).

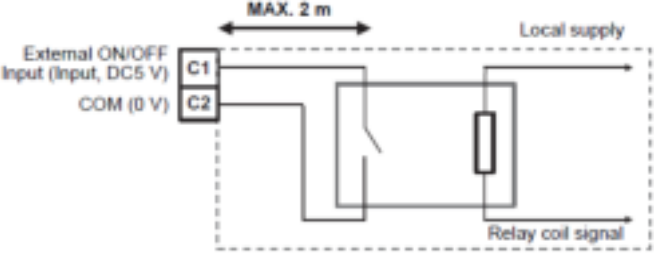

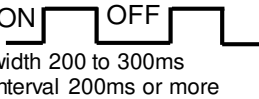

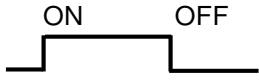

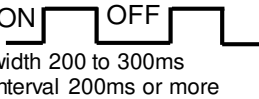

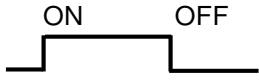

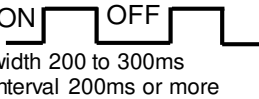

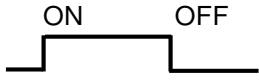

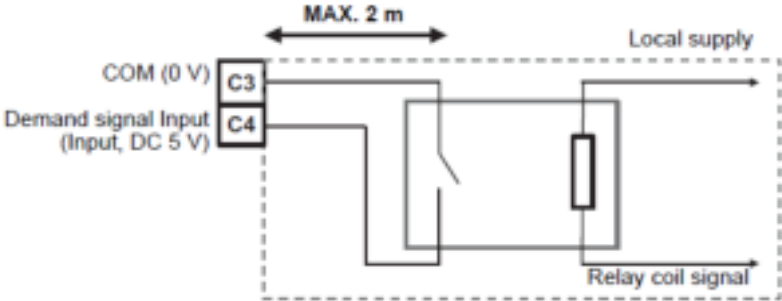

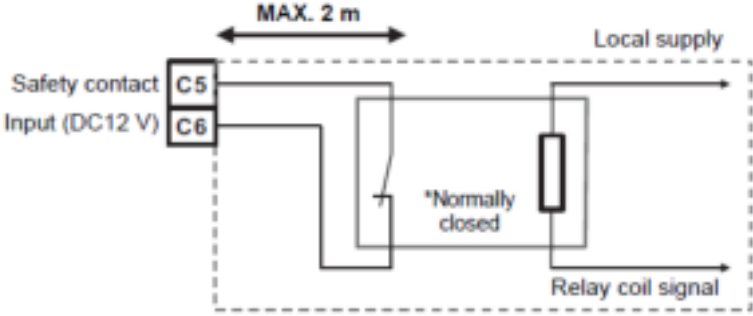

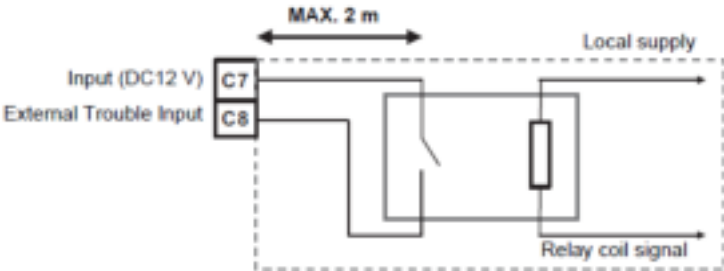

## 9 Cable specifications

Description	Terminal	Max. Cable Length (m)	Cable Specification
Control wiring between Dx-coil controller and outdoor unit	U1 / U2	1000	Shield wire: $\geq 1.5\text{mm}^2$
		2000	Shield wire: $\geq 2.5\text{mm}^2$
Total wire length of remote controller wiring and remote controller inter - unit wiring = L	A / B	500	Non shield wire: $0.75\sim 2.5\text{mm}^2$
Analogue Input (0 - 10V) Capacity Demand	A1 / A2	200	Shield wire: $0.5\sim 1.0\text{mm}^2$
Mode Input (Cool / Heat)	C23 / C24	100	Non shield wire: $0.5\sim 1.0\text{mm}^2$
Digital Output (DO_1, DO_2)	D31/ D32 D33 / D34	500	Non shield wire: $0.5\sim 1.0\text{mm}^2$

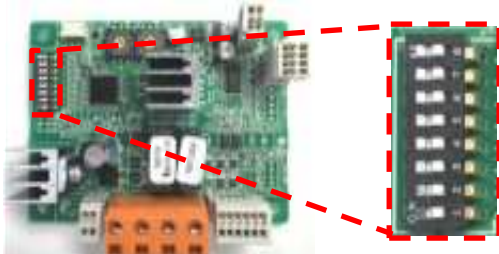

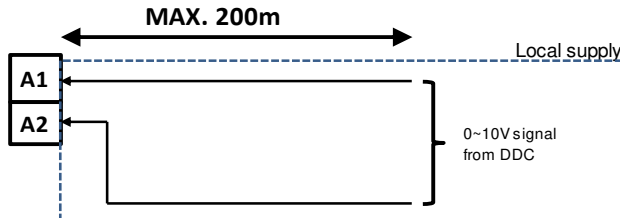

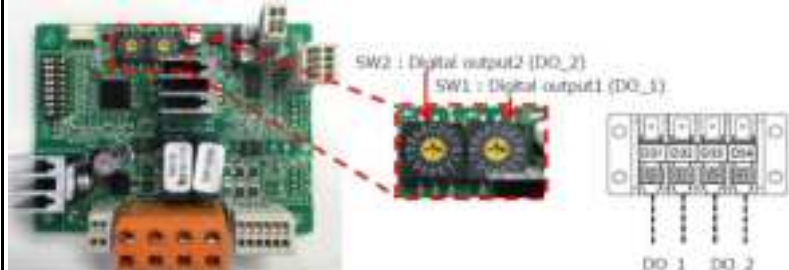

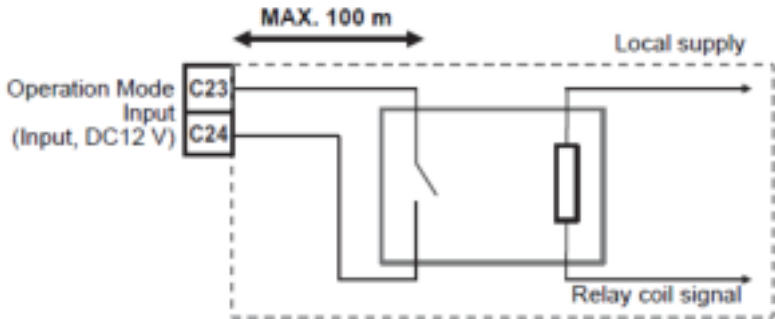

## 10 Interface requirements for controller

### 10.1 Indoor(DX) P.C board(MCC-1570) function

Function	Notes / Control Logic
<b>Fan Motor Active Digital Output</b> Terminal name : D1 / D2 (CN60)	<ul style="list-style-type: none"> <li>A fan control signal is output. It is usually the ON output at the time of operating, but it is the OFF output in defrosting.</li> </ul> 
<b>Alarm Active Digital Output</b> Terminal name : D5 / D6 (CN61)	<ul style="list-style-type: none"> <li>During Alarm operation, Alarm Active Digital Output is active.</li> </ul> 
<b>Defrost Mode Digital Output</b> Terminal name : D7 / D8 (CN60)	<ul style="list-style-type: none"> <li>During Defrost operation, Defrost Mode Output is active.</li> </ul> 
<b>Thermostat On Digital Output</b> Terminal name : D19 / D20 (CN82)	<ul style="list-style-type: none"> <li>When the thermostat of DX-COIL is ON, a signal comes out.</li> </ul> 

Function	Notes / Control Logic						
<b>External ON/OFF Input</b> Terminal name : C1 / C2 (CN61)	<ul style="list-style-type: none"> <li>· If the contact is closed, DX-COIL controller switch on. If the contact is opened, the system switch off.</li> <li>· External ON/OFF input signal type(pulse / static) is selectable by <b>Jumper Wire J01</b> on the MCC-1570 as table below.</li> <li>· If the system is switched using and external contact, then switching ON/OFF using the remote controller is still possible.</li> </ul>  <table border="1" data-bbox="695 568 1305 815"> <thead> <tr> <th>J01</th><th>Action</th></tr> </thead> <tbody> <tr> <td>Connect</td><td> Pulse input (Default)    Pulse width 200 to 300ms  Pulse interval 200ms or more </td></tr> <tr> <td>Cut</td><td> Static input   </td></tr> </tbody> </table>	J01	Action	Connect	Pulse input (Default)  Pulse width 200 to 300ms Pulse interval 200ms or more	Cut	Static input

## Dx-coil controller Wiring Diagram (DDC type)

- Notes
1. Please refer to the installation manual for wiring instruction.
  2. All shipment G0 and G6 are short-circuited.
  3. This wiring diagram indicates the connection state of 30M A101VAC.

REF-A201VAC does not include a 1" terminal P1, so it has five wires.  
A. #2 is used only in normal Dx-coil (2, 3, 4, 40H).

## 15 Check Codes

Common Check Codes (Note1 : DDC(0-10V) interface P.C. board is classified as a Remote controller)  
(Note2 : Regarding outdoor units, refer to their own service manuals)

- **E01 : No master remote controller, faulty remote controller communication**  
The header remote controller has not been set.  
Check the settings of SW3 bit1 located on the DDC(0-10V) interface P.C. board(TX-TOS1413).  
Check the remote controller inter-unit tie cable(A/B).
- **E09 : Duplicated master remote controller**  
Two remote controllers have been set master remote controller.  
Check the settings of SW3 bit1 located on the DDC(0-10V) interface P.C. board(TX-TOS1413).  
Check the remote controller inter-unit tie cable(A/B).
- **E13 : Indoor(DX) P.C. board(MCC-1570) - DDC(0-10V) interface P.C. board(TX-TOS1413) communication trouble  
Detected at DDC(0-10V) interface P.C. board**  
Check connection of tie cables(A/B) between the connector CN41(BLU) located on the Indoor(DX) P.C. board and the connector CN1(WHI) located on the DDC(0-10V) interface P.C. board.  
Check for the trouble in indoor(DX) P.C. board.
- **E14 : Indoor(DX) P.C. board(MCC-1570) - DDC(0-10V) interface P.C. board(TX-TOS1413) communication trouble  
Detected at Indoor(DX) P.C. board**  
Check connection of tie cables(A/B) between the connector CN41(BLU) located on the Indoor(DX) P.C. board and the connector CN1(WHI) located on the DDC(0-10V) interface P.C. board.  
Check DDC(0-10V) interface P.C. board power supply at CN4(WHI).  
Check for the trouble in DDC(0-10V) interface P.C. board.
- **F01 : TCJ Sensor trouble**  
Check connection of TCJ sensor connector and wiring.  
Check resistance characteristics of TCJ sensor.  
Check for trouble in indoor P.C. board.
- **F02 : TC2 Sensor trouble**  
Check connection of TC2 sensor connector and wiring.  
Check resistance characteristics of TC2 sensor.  
Check for trouble in indoor P.C. board.
- **F03 : TC1 Sensor trouble**  
Check connection of TC1 sensor connector and wiring.  
Check resistance characteristics of TC1 sensor.  
Check for trouble in indoor P.C. board.
- **F10 : TA Sensor trouble**  
Check the connection of TA sensor connector and wiring.  
Check resistance characteristics of TA sensor.  
Check for trouble in indoor P.C. board.
- **L02 : Outdoor units model disagreement trouble**  
Check outdoor unit model.  
(Check whether the outdoor unit corresponds to Dx-coil Interface or not.)
- **L09 : Indoor unit Power Code incorrect**  
Check the settings of DN Code 11 (See "DX COIL INTERFACE Configuration").
- **L22 : Incompatible group combination of indoor units**  
Check indoor units model.  
Check for trouble in indoor P.C. board.
- **L30 : Fan Motor operation monitor**  
Check the operation monitoring of the fan at terminals C7 / C8. If this contact is "CLOSED" , the check code "L30" is generated.
- **P10 : Safety contact trouble**  
Check the contact at terminals C5/ C6. If the contact is "OPEN", the check code "P10" is generated.  
If this contact is not used, a bridge connection should be installed on the terminals C5/ C6.

## 16 Related cautions

### (1) Installation work

- Secure enough service space for replacement of the Dx-valve KIT and the thermistors.

After the AHU controller is installed, address setting and unit capacity setting is necessary. Refer to the installation manual for the setting method.

- Refer to the outdoor unit installation manual or the data book for installation of the outdoor unit.

### (2) Test run

- Turn on the main power of the unit at least 12 hours before test run to power the crankcase heater. Insufficient powering time may result in compressor damage.
- Ensure the analogue input is voltage is set to  $\geq 4.5V$  before starting the test run.
- As the capacity setting is made at initial setting, a remote controller is necessary. Remove the remote controller after making the initial settings if it is not used.

(Refer to the installation manual for remote controller for more details.)

### (3) Operation control

If the error display appears on the remote controller, do not reset an error by yourself. Contact the service firm or the dealer.

- Refer to the data book for system controller when using the system controller.

### (4) Service

- Regular maintenance is required to prolong the life of the units. It is recommended that the maintenance contract be concluded with a maintenance firm.

## 17 Warranty

- Specifications of AHU and compatibility with National / Local regulations must be confirmed by your company.
- Selection of an appropriate AHU (with appropriate specifications to match those of units connected to the AHU such as configuration, dimension, life-span, vibration, noise level, or features) must be made by your company.
- Toshiba Carrier shall not be liable for any damage to the entire system or the AHU main body caused by connected AHU with wrong specification or wrong usage of AHU.
- Toshiba Carrier shall not be liable for any damage to the outdoor units and Dx-coil interface caused by AHU damage.
- Toshiba Carrier shall not be liable for capacity, responsiveness and accuracy of system.
