Light Kit for Star Wars Millennium Falcon 75105

Thank You

For Purchasing this product. To give you the perfect hidden-line effect, we use severely thin aviation-grade wire with high tension and pressure tolerance. However, due to its thin nature, be careful not to cut through it as it might be susceptible to shearing during installation. Always be careful not to press brick pieces down on the wire.

Let's Get Started

if you face any challenges, please feel free to reach out via **support@gameofbricks.eu** Please note that we offer 2 years of free light kit maintenance.

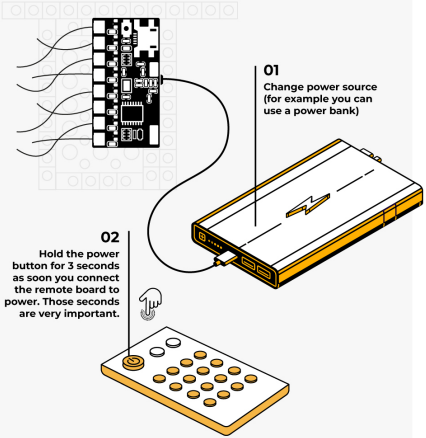
Remote Activation

#1 ACTIVATION



If it didn't help...

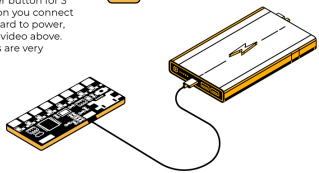
#2 ACTIVATION

01
Change power source
(for example you can use
a power bank)

02
Disconnect every light from the remote board like in this video, please find it by visiting this page:

https://youtu.be/c-bLNqpDCLUw

03
Hold the power button for 3 seconds as soon you connect the remote board to power, just like in the video above. Those seconds are very important.



The majority of faults with your remote or sound systems are due to a battery box. We highly recommend the use of a power bank (or any other power source) as that will solve most if not all of those problems. Please ensure that the maximum voltage is 6v.

Please also note that the remote will consume power even if it's off. So we recommend connecting the remote to a power source only while using it. We've done our best to find an alternative to battery boxes but have so far fallen short. Your battery boxes are great if you wish to change batteries regularly or for regular kits (not remote/sound). Please have our assurance that we will keep trying to make your experiences even better.

Remote and Sound Guide

Remote and Sound guides with clickable
Youtube links are available on our website:
https://gameofbricks.eu/pages/instructions

Connect light kit to the battery box and installation will be complete. If you would like to use another power source, please make sure the maximum voltage is 6V.
