

Installation Guide for the Toilet Bidet

Step 1: Preparation

Check if the bidet, stainless steel pipe, clips, seals, screws, and manual are complete. Turn off the toilet's water inlet valve and prepare a wrench and a cloth.

Step 2: Remove Old Parts

Use the wrench to disconnect the toilet tank's inlet pipe. Clean the interface thoroughly to remove dirt and water.

Step 3: Install the Bidet

Attach a seal to the bidet's inlet, then connect the pipe and tighten with a wrench. Fix the bidet to the toilet side using the provided clips and screws.

Step 4: Connect to Water

Link the other end of the pipe to the tank, ensuring a tight fit. Open the water valve and check for leaks. Tighten any loose connections if needed.

Step 5: Test the Bidet

Adjust the water pressure and switch between rear and front wash modes via the knob. Make sure the water flow is steady and both modes work properly.
