SILVER SALES A DIVISION OF SOUTHERN LOCK

March 1, 2019 – Southern Lock and Supply Company announced that it has acquired Silver Sales Inc., a security hardware distribution company specializing in safe locks and government hardware. The purchase will better serve the security needs of customers in commercial, industrial, and governmental positions throughout the industry.

Founded in 1982, Silver Sales Inc. has faithfully served customers in the safe lock and government security for over 30 years. The purchase of Silver Sales strengthens Southern Lock's promise to provide customers with a wide range of trusted security products and extraordinary service. In addition, Southern Lock will become a premiere distributor of Sargent & Greenleaf and Kaba Mas security products.

Bill and Judee Silver will remain involved in a consulting capacity, providing technical support for Southern Lock.

"We have always admired the trust and expertise that Silver Sales has exemplified in their market. As a fellow small business that understands the importance of personal connection, we're thrilled to honor Silver Sales' commitment to provide both tremendous customer service and comprehensive technical expertise," said David Swartz, Chief Operating Officer of Southern Lock and Supply. "Our acquisition of Silver Sales is an exciting opportunity for us to expand our offerings to our existing customer base and grow our presence in the safe lock and government supply markets."

ABOUT SOUTHERN LOCK

Southern Lock & Supply Company has been a distributor of security products and supplies since 1946. With merchandise from more than 200 manufacturers, Southern Lock maintains a large inventory of popular lines including Allegion, ASSA ABLOY, BEST Access Solutions, dormakaba, Sargent & Greenleaf, Master Lock, NSI, and more. With multiple locations and a knowledgeable inside staff, the company is able to achieve its goal of providing customers with quality products and the best service possible.

Southern Lock is a family business and we want our customers to feel like part of our family. We want to get to know you and your business, not just take your order or treat you like a number. Southern Lock has been serving the industry for over 70 years and is proud to represent an accumulated industry experience totaling 800 years. Our team is here to help your business grow.

X-10 High Security Combination Safe Lock

Impervious to External Attack

The X-10 was designed and developed as a direct result of the latest revision to federal specification FF-L-2740 (now Revision "B"). This is the US Government's highest security standard for container locks and doors. The X-10 is approved for use on all GSA Approved Security Containers and Vault Doors. The X-10 is also approved for use on Federal Specification FF-L-2890B locks installed on pedestrian doors to Secure Rooms and Sensitive Compartmented Information Facilities (SCIFs).

- Self-powered using green "PowerStar" Technology - Rotate the dial to power-up the lock
- Intuitive, visual controls guide the operator through programming and audit features
- Same three modes of operation as the X-09:
 - Single: 1 million combinations
 - Dual: 500 billion combinations
 - Supervisor/Subordinate: 2 million combinations
- Direct Dial: No need to clear before entering combination. Once you stop turning the dial, the power will shut down after 40 seconds.
- Automatic Lock Reset
- High-Security combination scramble
- Resists all forms of external manipulation and environmental attack
- Backlit LCD display approved by GSA that eliminates the need for external light sources
- Lock case incorporates a through case mounting feature to improve ease of installation
- Audit: Records all openings, record is non-resettable

X-10 COMBINATION SAFE LOCKS

ORDER #	ITEM #	LIST
547-1107	X-10X-RD-XXT-Z-M-E-Z-1A Security Combination Lock (for up to 4.5" thick doors)	\$1,933.05
547-1105	X-10X-RD-XXT-Z-N-E-Z-1A w/ Flush Bolt, Tapped Holes. Longer spindle for up to 10" thick doors	\$2,269.05

ALSO AVAILABLE

DKX-10 High Security Pedestrian Exit Device

FF-L-2890C Type IV

Developed to meet Government changes to Federal Specification FF-L-2890C. Used on GSA approved security containers and CDX series pedestrian door locks to secure rooms and Secure Compartmented Information Facilities (SCIFs). Preferred by U.S. Government agencies and Government contractors.

DKXL-10 High Security Pedestrian Door Lock

FF-L-2890C Type II

The GSA has approved the Type II DKXL-10, which is comprised of a CDX-10, attached – through linkage – to a BEST Grade 1, heavy duty cylindrical lock. Linkage ensures simultaneous retraction of both the secondary cylindrical lock latch bolt and the CDX-10 primary lock bolt. The combination of two proven products ensures compliance with codes for security, fire, and life safety and ADA requirements. For use on both inswing & outswing doors.

CDX-10 High Security Pedestrian Door Lock

GSA Approved to meet Federal Specification FF-L-2890B, Type V

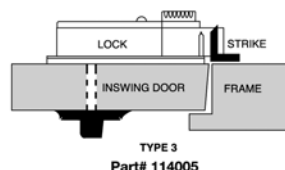

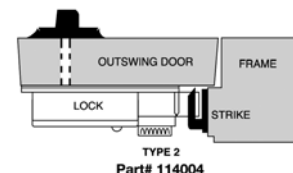

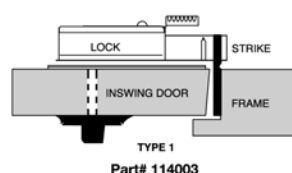

The Kaba Mas CDX-10 consists of a GSA approved, style 1 X-10 High Security combination lock mounted on a deadbolt base plate. The base plate is surface-mounted to the inside of the face of the door. The system provides a means of using a GSA approved combination lock to secure pedestrian doors on type VI secure spaces. Product features include:

- A means of latching the primary locking bolt in the retracted position to allow authorized personnel to access the area through an access control system during operational hours of the facility
- An inside knob that can be rotated to allow egress when the primary locking system is activated

Auditcon 2 Series® Safe Locks

Auditcon locks are the new standard in safe lock security and audit capability. The Auditcon lock series features PowerStar's award winning technology and cannot be compromised by outside manipulation. With unprecedented audit capability, the Auditcon family of electronic locks was developed to address the security requirements of a broad range of financial, retail, commercial and industrial markets. All models are available in either Round or Vertical housings.

Features and Benefits

- **PowerStar Technology:** Self-powered. No batteries, no wiring, no maintenance.
- **SmartKey Capability** allows convenient data download and transport for PC viewing and offers dual-level security that requires a four digit PIN and personal encoded key to gain access.
- **Audit Trail:** User's ID is recorded every time the lock is opened.
- **Wrong Try Lock-out:** Hackers are locked out after 5 wrong combinations.
- **Economical Replacement:** Utilizes the same footprint as most conventional mechanical combination lock.
- **Time Delay** for 1 to 99 minutes.
- **Time Delay Display** displays the time, informing the user when access will be granted.
- **Battery Assist for Time Delay:** 9-volt battery will continually flash the LEDs throughout the duration of a Time delay or Open Window Period
- **Dual Mode** requires the combination and/or Smart keys of two users to gain access.
- **Silent Duress Alarm** safely lets employees comply with intruder's demands while alerting authorities
- **Audit Only Software** allows you to save or print audit trail information from your PC.
- **Choice of Bolt Designs:** The "Swing Bolt" automatically locks when the safe handle is closed. The standard 'Dead Bolt' functions like a traditional mechanical combination dial lock.
- **Technical Support:** Kaba Mas Technical Support Staff is available 24 hours a day, seven days a week. Call 888-950-4715 or 859-253-4744.

Model 52/T52

Model 52 is supplied with all basic functions for residential and commercial applications with the convenience of electronic locking. Alternatively, the **T52** is available with time delay functions

- 2 users
- 6 digit access
- Replaces mechanical Group I & II locks
- Round or vertical housing
- Dead bolt or swing bolt available
- EN 1300 B, VdS class 2, SBSC, UL type 1

Model 252

Model 252 is ideal for security applications where shared access and audit capability are crucial.

- 20 users/100 record audit
- 8 digit access combination
- Replaces mechanical Group I & II locks
- Round or vertical housing
- Dead bolt or swing bolt available
- EN 1300 B, VdS class 2, SBSC, UL type 1

Model 552

Model 552 provides advanced features including: Time Window Access, Time Delay, Time Lock functions plus a time and date stamped audit trail. The locking periods can easily be set with the software and programmed to the lock via Smart Key.

- 99 users/400 record audit
- 8 digit access combination
- Replaces mechanical Group I & II locks
- Round or vertical housing
- Dead bolt or swing bolt available
- EN 1300 B, VdS class 2, SBSC, UL type 1

Cencon ATM Cash Vault Security System

The Cencon ATM Cash Vault Security System from Kaba Mas is designed to combat insider theft from ATMs through the combined use of lock hardware, systems software and Smart Keys™. Cencon offers total access control and accountability with its One Time Combination™ feature. The One Time Combination is dispatched from a central location and cannot be reused at a later date, thus eliminating temptation. Unique software allows you to control and monitor tens, hundreds, even thousands of locks located anywhere in the world - from one central location. Cencon is a revolutionary and cost-effective solution to today's most serious security challenges.

Dial & Keypad

3.79" H x 3.83"

W x 1.38" D

Lock Body

2.4" H x 3.34"

W x 1.19" D

Features and Benefits

- **PowerStar Technology:** Use of an internal generator creates all the necessary power. No batteries or external wiring required.
- **Access Control:** A user needs both a One Time Combination and a SmartKey to access the lock.
- **One Time Combination:** Dispatched each time access is required to a container controlled by a Cencon lock.
- **SmartKey:** An encrypted electronic key, used as a personal identifier, programming device or to transfer data between system components.
- **Close Seal:** Acts as an electronic signature, stamping the date and time showing the lock was locked and secured.
- **Duress:** When combined with a connection to an alarm system, entering a special "Duress" Combination will automatically send a silent alarm.
- **Audit Trail:** Records all lock activity up to 956 events, and permits easy downloading of the information via a SmartKey for generating detailed audit reports.
- **Easy Retrofit:** Same footprint as conventional mechanical combination locks.
- **User Friendly Software:** Allows you to control hundreds of containers with no special wiring. The Windows 95/98 point-and-click interface makes it simple to install and use.
- **Three Modes of Operation:** Cencon locks can operate in any of three modes - one for the First Line Maintenance personnel (FLM Mode), one for cash replenisher or armored service (Route Mode), and one for bank employees (Bank Mode). Each mode addresses the individual access needs for each category of user. Cencon System 2000 locks can be operated in any of these three modes - individually or in combination.

ELECTRONIC SAFE LOCKS

AxisBlu™ Bluetooth Enabled Safe Lock

AxisBlu combines the latest Bluetooth technology upgrades with S&G's Titan lock body to create a radical new option for safe security—accessing your safe securely via mobile app. AxisBlu is the first secure safe lock with a no keypad option. Users may choose from a sleek, modern medallion or our tried-and-true traditional gun safe lock keypad.

AxisBlu Features

- **BLUETOOTH INNOVATION.** The latest Bluetooth upgrades bring the technology up to S&G's stringent security standards. New functionality and multiple levels of authentication in mobile devices make AxisBlu's Bluetooth connectivity a reliable, fully secure method of access.
- **PROVEN SECURITY.** Backed by the proven security of S&G's trusted Titan motorized locking device, AxisBlu adds firmware enhancements for even greater protection.
- **STARTLING CONVENIENCE.** AxisBlu pairs with up to five mobile devices along with ten users—allowing lightning fast Bluetooth access via our AxisBlu app.
- **EASY INSTALLATION.** Although AxisBlu leverages multiple components for added security, we designed the lock for easy installation—matching standard safe lock footprints and machining.

===== ELECTRONIC SAFE LOCKS =====

6120 Motorized Electronic Safe Locks Shorter time delay and one-step operation

A motorized electronic safe lock, the Model 6120 gives you the added convenience and control you want for greater security. Its motor-driven lock bolt offers a high level of security by eliminating the threat of vibration and bouncing attacks. Universally handed with a shorter time delay and one-step operation, it is perfect for home gun safes or safes in small commercial facilities.

Model 6120 Features

- Motor-driven lock bolt eliminates threat of vibration and bouncing attacks.
- Auto relocks after 6 seconds. Eliminates the dangerous practice of “day locking” or leaving the safe open.
- Penalty time feature prevents opening until a valid code is found and locks after three wrong code entry attempts.
- Management reset code, one master code, and eight user codes.
- Management reset code (MRC) restores the lock to its original factory code if the master code is lost.
- Non-deadlocking spring bolt model is designed for lightweight and inner compartment doors that require the lock to latch and secure the door.

SARGENT AND GREENLEAF®

ELECTRONIC SAFE LOCKS

2006/2007 Titan™ Electronic Safe Locks

Motor driven locking for an extra measure of security

The Model 2006/2007 Titan safe lock, a robust, 10-user lock, comes with a completely redesigned locking mechanism that is based on the proven security of a rugged, motorized blocking device. These electronic safe locks are often used in the banking and commercial industries to protect key assets. Uses standard S&G Magic Module footprint for easy retrofit, and it's universally handed and reversible for RH, LH, VU, and VD mounting.

Three modes of operation:

- Multi-User—The Master Code, Supervisor Code, and any User Code can open the lock with a single code.
- Manager/Employee—Code holders can access the safe only when it's been enabled by a Master Code or Supervisor Code holder.
- Dual Control—Multi-User mode is the factory default, but Dual Control is keypad selectable as an alternate, permanent mode of operation. Two different lock codes must be entered within one minute of each other to open the safe. This provides a higher level of security.

2006 Titan™ PivotBolt™

The Titan PivotBolt automatically locks to re-secure the safe whenever the container's boltwork moves to the fully closed position. Lock bolt retraction and extension is controlled by the movement of the safe's boltwork. Withstands 225 lbs of bolt end pressure for a high level of security in boltwork blocking applications.

- Connected to the keypad only by cable, which means the lock does not need to be placed directly behind the keypad. It can be located anywhere on the inside of the safe door.
- Penalty time feature to prevent opening by entering sequential or random codes until a valid code is found.
- Can be used with the S&G 2-battery keypad, standard 1-battery keypad (lighted and non-lighted), or the non-rotating low profile keypad

2007 Titan™ D-Drive™

The Titan D-Drive's lock bolt retraction and extension is controlled by turning of the keypad, offering dependable manual control of the locking bolt. Exclusive no-twist cable design prevents cable damage with keypad rotation. Withstands 225 lbs of bolt end pressure for a high level of security in boltwork blocking applications.

LOCK BODY WITH KEYPAD

ORDER #	ITEM #	LIST
735-2010	S&G 2007-102 Titan D-Drive & Rotating Keypad, Chrome	\$246.50

Titan™ D-Drive™ Features:

- The Titan D-Drive™ lock features a new design, motor driven locking mechanism for an extra measure of security and longer battery life.
- Lock bolt retraction and extension is controlled by turning of the keypad, offering dependable manual control of the locking bolt. And the sure-grip, low profile keypad gives a good, solid feel for the action of the lock.
- The Titan D-Drive™ uses an exclusive, no-twist cable design that virtually eliminates the risk of cable damage due to keypad rotation. The cable is located in a recessed channel in the lock's extruded aluminum spindle, safely out of harm's way.
- The Titan D-Drive™ uses the standard S&G Magic Module footprint, allowing for easy retrofit without the need for boltwork or mounting screw location changes. Plus, it's universally handed for RH, LH, VU, and VD mounting.
- Management reset code, one master code, one supervisor code, eight user codes, and one time delay override code.
- The management reset code (MRC) lets you set a new master code of your own choosing if the old master code is lost or forgotten. **Using MRC wipes out all existing codes and settings and restores back to original factory settings.**
- The Titan D-Drive™ has a penalty time feature to prevent opening by entering sequential or random codes until a valid code is found.

1006/1007 Spartan™ Electronic Safe Locks

Anti-shock technology and automatic locking

- External battery placement puts the battery inside the keypad, where it can be easily replaced, even with the safe locked. And efficient lock design means the battery must be changed significantly less often.
- The S&G® Spartan™ lock body is the same size and mounting footprint as other standard S&G locks, allowing for easy retrofit without the need for boltwork or mounting screw location changes. Plus, it's universally handed for RH, LH, VU, and VD mounting.

Spartan™ Features

- Simple, 2-user lock
- Manager can add, delete, or temporarily enable or disable the 2nd user code at any time
- Optional MRC (Management Reset Code)
- Two-year warranty
- Lock bolt relock verification signal (double beep/LED flash)
- Penalty lock-out after three wrong code entry attempts.
- Tested to 10,000 openings on a single Duracell® 9-volt alkaline battery.
- Low battery signal.
- Beeper volume toggle.
- Uses motorized bolt-blocking technology; not shock-susceptible solenoids.

1006 Spartan™ PivotBolt™

The PivotBolt™ is connected to its keypad only by cable and autolocks to re-secure the safe. No rigid spindle, so the lock does not have to be placed behind the keypad. It can be anywhere on the inside of the safe door.

2890B-500 Features

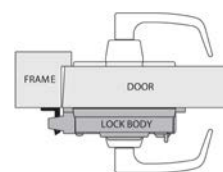

- Ships with one of the electromechanical combination locks that meet Federal Specification FF-L-2740B—S&G 2740B or X-10.
- Heavy-duty, surface mounted strike with integral roller for secure, smooth operation.
- Levers tested to 1M cycles and panic bar to 500K cycles for reliability and longevity.
- All six configurations are based on the same modular platform, providing a faster, standardized installation in facilities with multiple openings.
- 3-hour UL fire rating - highest in this market segment.
- NFPA 101 Life Safety, UL 305, BHMA, UL Fire 10B and 10C Certifications.
- The only lock that allows you to shelter in place during an active shooter situation and meets Federal Specification FF-L-2890B (when used with the S&G 2740B lock).
- Five-year warranty when ordered and installed with the S&G Model 2740B Lock. Two-year warranty when ordered and installed with an alternate lock.

8497 Brute® Electronic Door Deadlatches Built to the Requirements of Federal Specification FF-L-2890B

The S&G Brute lock is an extremely heavy-duty deadlatch lock for use in indoor applications, such as ATM rooms, cash handling areas, research laboratories, etc. Surface mounted for ease of installation and suitability for a wide range of applications, the Brute lock is fail secure and features an inside release knob for rapid egress. Great for safe rooms because they can be mounted on the inside surface of the door with nothing showing on the outside. Since it can be unlocked manually from the inside and it's a fail secure lock it's fire safety friendly for non public areas.

Brute® Features

- Surface mounted for ease of installation and suitability for a wide range of applications.
- Inside release knob provides for rapid egress.
- Strikes available for both inswing and outswing doors.
- An ideal security solution for indoor applications, such as ATM rooms, cash handling areas, research laboratories, etc.
- Originally designed to be used with the (discontinued) S&G Code/Tronic™ III access control device, The Brute® deadlatch can be used with any control device that meets its electrical requirements.
- The Brute® deadlatch uses a heavy duty 12 VDC solenoid. The 24 VDC voltage requirement increases bolt retraction force and will not harm the solenoid.

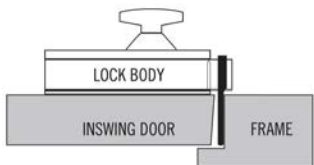

Electrical Specifications:

Required voltage: 24 VDC

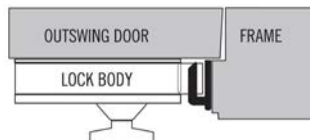

DC coil resistance: 6 OHMS

Current: 5.5 to 6.5 AMPS

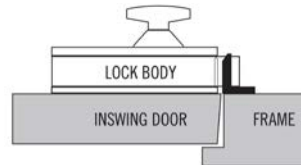

Minimum recommended wire size: 18 gauge

SARGENT AND GREENLEAF®

2937 Model Group 1 Mechanical Safe Locks Built to the Requirements of Federal Specification FF-L-2937

The Model 2937 lock represents the latest design advances to produce a mechanical lock to secure certain types of GSA approved containers, such as field safes, armory vault doors, weapons containers and similar items. The Model 2937 lock is a UL Group 1 lock designed to meet Federal Specification FF-L-2937 and is built to provide a high level of security for government and defense industry applications. Along with a key changeable wheel design for simple combination changing, the 2937 incorporates S&G's patented, time-tested torque adjuster to allow precise setting and maintenance of wheel pack torque.

- Underwriters Laboratories Listed Group 1.
- Stainless steel bolt withstands a minimum of 600 lbs. of side and end load.
- Dial spindle incorporates carbide barrier pins and a shear line to control the point of separation in a forced entry attempt.
- Three all metal wheels provide for 1,000,000 unique theoretical combinations.
- Resistance to expert manipulation tested and verified by Underwriters Laboratories to exceed 20 man-hours.
- Built to provide a high level of security for government and defense industry applications.
- Internal relock trigger secures the lock in the event of a burglar's punch attack.
- Integral thermal relock component protects against thermal attacks.
- Two-way drive cam and two-way dial spindle combine to allow mounting right-hand, left-hand, vertical-up, or vertical-down.
- Uses a standard S&G 3-wheel change key (U8 or U9).

SARGENT AND GREENLEAF®

GOVERNMENT HARDWARE

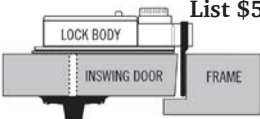

Extension 50 Mechanical Automatic Door Deadbolt

Three-wheel combination lock, 1 million different combinations

Extension 50 Features

- Surface mounted
- Automatic locking deadbolt mechanism incorporates an inside release knob for rapid egress, and a manual “dogging” switch to keep the device unlocked when the secured area is occupied.
- Strikes available for both inswing and outswing doors.
- Equipped with either an 8400 or 8500 Series Group 1 or Group 1R combination lock for a high level of security.
- An ideal security solution for indoor applications, such as ATM rooms, cash handling areas, research laboratories, etc.
- All units include a rectangular hardplate that is placed under the mounting plate to deter forced entry attacks.
- Interlocking strike (any model) prevents spreading of the door and frame.
- Hardened steel pins inside the locking bolt deter sawing and increase forced entry resistance.

MECHANICAL SAFE LOCKS

6730/6731 SERIES Group 2 Mechanical Safe Locks

The 6730 Series is designed and constructed to perform on gun safes, bank locks and the most demanding commercial applications. With more than two hours of manipulation resistance and 1,000,000+ theoretical combinations to combat auto-dialers, it is widely recognized as the standard Group 2 lock of the industry.

6730 Series: UL Group 2, three-wheel – brass

6731 Series: UL Group 2, four-wheel – brass

Features

- Three brass and aluminum wheels provide 1,000,000 theoretical combinations. Four-wheel 6731 model offers 100,000,000 theoretical combinations.
- Made to outperform other locks in the most demanding commercial applications.
- Internal reload trigger secures the lock in the event of a burglar's punch attack.
- 4-way drive cam for mounting right-hand, left-hand, vertical-up, or vertical-down.

SARGENT AND GREENLEAF®

MECHANICAL SAFE LOCKS

6741 SERIES Group 2 Mechanical Safe Locks

Three die cast Zamak and aluminum wheels provide 1,000,000 theoretical combinations. Die cast push-pull Lever with wider dialing tolerances makes the lock easy to dial and less sensitive to bolt side and end pressure than standard Levers.

- UL Group 2 Listed
- Internal Relock Trigger
- Chromated Zamak Lever
- 3 Zamak and aluminum wheels
- Stamped Brass Flys
- Single-Locking Wheel Mechanism
- Wave Washer Torque Adjuster
- 620L Clear Coat on Case
- Four-way drive cam

6630 Group 2M Mechanical Safe Locks

The 6630 Series is designed and constructed to perform in ATMs and the most demanding commercial applications. These locks use the 6730 lock design—but with added security features such as false wheel gates and an eccentric roller in the Lever nose. With more than two hours of manipulation resistance, you can be assured your cash assets are secure and you'll have years of problem-free performance.

6630 Features

- Three brass and aluminum combination wheels provide 1,000,000 theoretical combinations. The four-wheel 6631 Series provides 100,000,000 theoretical combinations.
- Designed and constructed to perform in the most demanding commercial applications.
- Internal relock trigger secures the lock in the event of a burglar's punch attack.
- Four-way drive cam allows mounting right-hand, left-hand, vertical-up, or vertical-down.

MECHANICAL SAFE LOCKS

8410 SERIES Group 1 Manipulation Proof® Mechanical Safe Lock

The 8400 Series is designed for use in government applications such as the postal service as well as high-value safes. These three-wheel locks provide mechanical durability and over 1 million possible combinations for superior, long-lasting security.

8410 Features

- Tested and verified by Underwriters Laboratories to resist 20 man-hours of expert manipulation.
- Three combination wheels (made of brass and aluminum or acetal resin) offer 1 million theoretical unique combinations.
- Designed and constructed to perform in the most demanding applications.
- Internal relock trigger secures the lock in the event of a punch attack.
- Using a Centi-Spline dial, the lock can be mounted right-hand, left-hand, vertical-up, or vertical-down

8550 Group 1 and 8560 Group 1R Mechanical Safe Locks Three-wheel combination lock, manipulation resistant

Tested against expert manipulation and designed with three combination wheels for 1,000,000 possible combinations, you can count on the 8500 Series to provide the higher security you need.

Features

- 8550 Series: Underwriters Laboratories Listed Group 1, VdS Class 2, CEN B, DNV 3492, CNPP A2P B/E.
- 3 wheels provide 1 million theoretical combinations.
- Manipulation resistance tested and verified to exceed 20 man-hours.
- The 8560 Series has also been tested against 20 man-hours of radiological imaging attacks by Underwriters Laboratories.
- Internal relock trigger secures the lock in the event of a burglar's punch attack.
- Mount RH, LH, vertical-up, or vertical-down.

KEY CYLINDERS

Disc tumbler cylinder for rekeying or repairing key locking, convertible style dials, or to convert nonkey locking dials to the key locking function. Uses a standard Y13 keyway and five brass discs. When the cylinder is pushed into the dial, a spring-loaded brass retainer snaps into position to hold the cylinder in place. Separate insert available for conversions. Two keys per cylinder.

951C High Security Padlock

Commercial keyway (S1) version of the Model 951 padlock

951 NSN: 5340-01-217-5068

951 Federal Specification: MIL-DTL-43607J

The Model 951 represents the most advanced security features found in any padlock. Constructed with special barrier materials inside the body and shackle to resist cutting and sawing, it is ideal for perimeter security and any location where the highest level of resistance to forced entry is required—making it the ultimate padlock.

Features

- This rugged, key retaining padlock is built to conform to rigid specifications for indoor and outdoor high security applications—Ideal for perimeter security and any location requiring a high degree of resistance to forced entry.
- Easily field disassembled by use of a control key for service or rekeying.
- Equipped with a commercially available, high security Medeco Biaxial key cylinder.
- Cast stainless steel body.
- Body and shackle incorporate exotic barrier materials for maximum resistance against cutting, drilling, and sawing.
- Shrouded shackle offers 5/8" clear opening and provides a high degree of resistance against common wedging attacks.

We can also repair and service this product!

Dimensions

Shackle Material: Hardened Steel

Shackle Diameter: 1/2"

Throat Opening in Shackle Shroud: 3/4" W x 7/16" H

Clear Shackle Opening When Locked: 5/8"

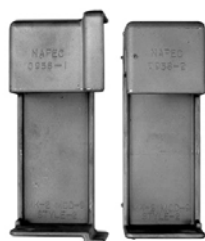

Overall Dimensions: 4-11/16" H x 2-3/4" W x 1-13/16" D

Weight: 4 lbs.

0881/0883 Environmental Padlocks

The Model 0881/0883 environmental padlock is designed to protect against both physical attacks and harsh weather. It was made to withstand **extreme weather** for extended periods of time, and still open with the correct key when needed. With **self-cleaning locking cylinders**, the Model 0881/0883 opens quickly and easily even under the toughest conditions. Ideal for outdoor use in any climate, S&G environmental padlocks have become the standard of security in the railroad, utility, construction and refinery industries.

Features

- **BUILT-IN SECURITY.** The highly durable shackles in the Environmental Padlock are double ball locked to resist shimming, pulling, cutting, and sawing attacks. We added a powdered metal steel body around the locking cylinder for even greater security.
- **ALL-WEATHER PERFORMANCE.** With electroless plating inside and out and unique flow-through drain holes to keep water out of the lock, the Environmental Padlock delivers exceptional corrosion resistance. Self-cleaning lock cylinders sweep dirt and grit out with every key operation.
- **FLEXIBLE SIZING.** Environmental Padlocks are available in two shackle sizes to fit most outdoor applications.

Case hardened (9/16") or stainless steel (3/8") shackle for maximum pull resistance

Unique top-loaded cylinder can only be accessed when shackle is in unlocked and open position

Electroless nickel plating inside and out to resist corrosion

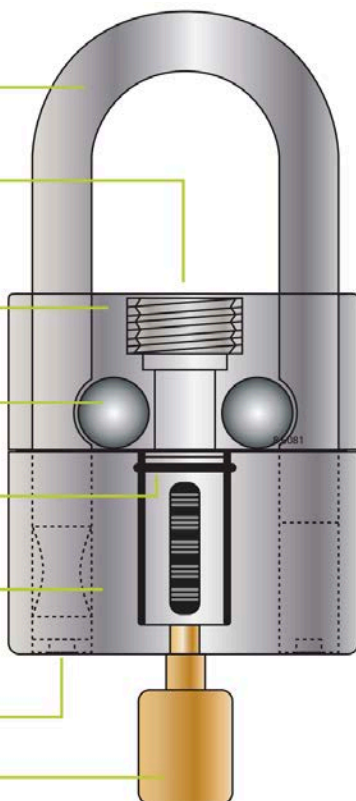

Dual deadlocking shackle to prevent shimming and shackle pulling

Fluorocarbon o-ring diverts water from cylinder

Powdered metal steel body built up around cylinder, with narrow shoulder to reduce leverage points

Unique flow-through drain holes

Key retained when unlocked for higher security

Southern Lock's experts will build your padlock to order!

Whether you need keys cut to code or want to add padlocks to existing key codes, we can service all your EP padlock needs quickly with our extensive inventory.
