

VAV Controller: eZV-440

Description

The eZV-440 is a native BACnet controller with an integrated airflow sensor and damper actuator for VAV applications, available in both configurable and fully programmable versions.

The eZV communicates using BACnet MS/TP on its RS-485 main LAN port. It also has a RS-485 subLAN port for the optional addition of enteliZONE or BACstat® smart network sensors.

Application

The eZV-440 covers a wide range of VAV configurations including multi-stage reheat with analog, binary or floating control, and series or parallel fan boxes.

The eZV-440 includes built-in algorithms that are easy to configure for typical VAV/VVT applications.

The eZV-440 is a fully programmable model that allows you to either create your own completely custom zone programs or modify the built-in algorithm's behavior.

Features

- ▶ Local scheduling, trending, and alarming support
- ▶ Built-in configurable VAV algorithms for quick setup and commissioning
- ▶ Programmable option allows customization for non-standard sequences or repurposing unused I/O
- ▶ Universal outputs provide flexibility for any combination of analog, binary, or floating output stages
- ▶ Firmware upgrade and database load / save over the network
- ▶ RS-485 subLAN supports up to 4 DNS or eZNS LINKnet network sensors, or up to 4 EnOcean devices with addition of a CON-ENOC EnOcean gateway
