

Interactive BIOS simulator

HP Engage Go 10 Mobile System

Welcome to the interactive BIOS simulator for the
HP Engage Go 10 Mobile System

Here's how to use it...

[BIOS Utility Menus:](#) (Click the link to navigate to the individual menus)

On this page you will find thumbnail images of each of the product's BIOS utility menus. To view a specific menu in greater detail, simply click that thumbnail. Just as in the live BIOS, on each menu, you can select the tab of each of the other utility menus to navigate directly to that menu.

Menu options:

While the menu options cannot be toggled, many of them offer item specific information about that option. To view this information, use the cursor to rollover the option and the information will present in a pane on the right of the BIOS screen.

That's it!

On every page there is a link that brings you back to either this Welcome page or the BIOS Utility Menus page enabling you to navigate to whatever BIOS option you wish to review.

Update System BIOS

Current System BIOS Version:	T97 Ver. 80.40.01
Current BIOS Release Date:	05/26/2021
Installation Date of Current BIOS:	06/24/2021
Most Recent Update Check:	Never Checked

Item Specific Help

- 1. Check HP.com for BIOS Updates**
Checks for the latest BIOS release revision on the network, and lets the user decide whether to download the BIOS image and update System.
- 2. Lock BIOS Version**
If not selected, then BIOS updates are allowed, if selected then updates to BIOS are not allowed.
- 3. Click on the field to see the options.*
- 4. Allow BIOS Updates Using a Network**
Enable/Disable automatic BIOS updates through the network in a scheduled basis.
- 5. BIOS Update Preferences**
Sets the configurations to perform BIOS updates through the network.
- 6. Network Configuration Settings**
Configure network settings to be used for download and upload.

Network BIOS Update

MS Windows Bitlocker Drive Encryption (BDE) may be enabled on your system. HP requires that BDE be suspended temporarily before the BIOS is flashed and that you obtain your BDE recovery password or recovery PIN before suspending BDE. After the BIOS is updated, BDE can be resumed.

5

Force HTTP no-cache

6

Item Specific Help

- 1. Proxy Server**
Enable/Disable the use of a proxy server.
- 2. Edit Proxy Server**
Specify the Proxy Server Address and the Port Number through the common-use <server>:<port> notation.
- 3. Test Network Connection**
Check the network connection using current BIOS update configuration.
Click on the field to see the options.
- 4. IPv4 Configuration**
Setup for static IPv4 address.
Click on the field to see the options.
- 5. DNS Configuration**
Configure a list of DNS addresses.
- 6. Force HTTP no-cache**
Disable HTTP caching.

Sure Start BIOS Settings Protection **1**

Sure Start Secure Boot Keys Protection

Enhanced HP Firmware Runtime Intrusion Prevention and Detection **2**

Sure Start Security Even Policy

Sure Start Security Event Boot Notification

3

Item Specific Help

1. Sure Start BIOS Settings Protection

When enabled, HP Sure Start will lock all critical BIOS settings and provide enhanced protection for these settings via the HP Sure Start non-volatile (flash) memory

- The BIOS administrator credentials must be set to enable this setting
- See HP Sure Start documentation for details on which BIOS settings are protected

2. Enhanced HP Firmware Runtime Intrusion Prevention and Detection

Enables monitoring of HP system firmware executing out of main memory while the user Operating System is running.

Any anomalies detected in HP System firmware that is active while the user operating system is running will result in a Sure Start Security Event being generated.

Click on the field to see the options.

3. Sure Start Security Event Policy

This setting controls HP Sure Start behavior upon identifying a critical security event (any modification to HP firmware) during OS runtime.

- Log event only - HP Sure Start will log all critical security events in the HP Sure Start Audit log within the HP Sure Start non-volatile (flash) memory
- Log Event and notify user: In addition to logging all critical security events, HP Sure Start will notify the user within the operating system that a critical event has occurred
- Log Event and power off system: In addition to logging all critical events, HP Sure Start will power off the system upon detecting a HP Sure Start Security Event. Due to the potential for data loss, use of this setting is only recommended in situations where security integrity of the system is a higher priority than the risk of potential data loss

Provisioning Version: 0

Item Specific Help

- 1. HP Sure Recover**
If this setting is enabled, the system firm-ware will honor local and remote requests to reinstall the OS. If it is disabled, all requests to reinstall the OS will be ignored.
- 2. Recover from Network**
If this setting is enabled, the system firm-ware will obtain the recovery agent from the network. Otherwise, the system firmware will obtain the recovery agent from a local drive.
- 3. Recover after Boot Failure**
If this setting is enabled and no bootable UEFI OS is found, the system firmware will launch HP Sure Recover.
- 4. Prompt before Boot Failure Recovery**
If this setting is enabled and a no bootable UEFI OS is found, the user is notified of the boot failure and asked to choose whether to start or cancel HP Sure Recover.

Item Specific Help

- 1. Pre-boot DMA protection**
Selecting The Device Scope For Prer-Boot DMA Protection
- 2. Early PCIe Delay**
Configurable delay to allow add-in PCIe cards to finish training prior to system firmware disabling root ports which don't appear to have any devices connected to them.
- 3. NVMe Write Endurance Masking**
When enabled, system will no longer pause to report a critical error during boot when NVMe write endurance is exceeded. All other errors will continue to be reported as usual.
- 4. USB Type-C Connector System Software Interface (UCSI)**
The UCSI option should be disabled if booting a Microsoft Windows 10 version before 1709 to avoid system stability issues.
