Modutrol actuators

Modutrol IV servo motors

Modutrol IV Motors are spring return and non-spring return motors used to control dampers and valves.

- M62xx models are three-wire floating control motors for use with controllers that provide a switched spdt or floating output and have an internal electrically isolated feedback potentiometer that provides indication of the motor shaft position.
- M72xx models accept a current or voltage signal from an electronic controller to position the motor shaft to any point between open and closed.
- M91xx and M94xx models use a 1350hm modulating proportional signal to position the motor shaft to any point between open and closed.

Modutrol IV motors are used for damper and valve control in industrial burner applications and air handling installations.

Approvals

- CE, UL, FM, CSA, EAC

Protection class

IP44

- Weather protection kit is available as accessory to upgrade to IP54

Ambient temperature

-40 ... 66 °C

Maximum humidity

85 %rh

Features

- Screw terminals are standard.
- Adapter bracket for matching shaft height of older motors (ModIII) is available.
- Most models have field adjustable stroke (90 to 160).
- Die-cast aluminium housing.
- Two adjustable internal SPDT auxiliary switches are factory mounted.
- Dual shaft ends for normally open or normally closed valve or damper application. Both shaft ends offer the same torque rating.

Input voltage

- Default: 24 Vac
- Via optional built-in transformer: 24/120/230 Vac
- Line frequency: 50/60 Hz

Shaft mounting

9.5mm (3/8") square for all models on both ends

End switches

2

Function

Normally Closed

Additional description

- Modutrol motor timings are independant of line frequency.
- Torque ratings for dual-ended shaft motors are the sum of the shaft torques (power-end torque plus auxiliary-end torque).
- Breakaway torque is the maximum torque available to overcome occasional large loads such as a seized damper or valve. The breakaway torque is 1.5x the normal rated torque.
- Other models than listed in this catalogue are available outside Europe. Most models can be replaced by the available European models.

Diamond Sylk Spring Return Actuator, MS3103

The new Honeywell Diamond Sylk Spring Return Actuator provides powerful performance from a compact and intelligent package for fast and easy installation. Sylk actuators rely on the Honeywell Proprietary Sylk bus communication protocol for positioning and position feedback. Multiple devices can be controlled using the Sylk Communicating architecture without using up any controller I/O. Simplified shaft adapter, integral conduit connectors, 40% thinner and smaller overall form factor means Diamond actuators easily accommodate most length, width and depth restrictions. Polarity insensitive wiring ensures that the actuator is always installed right the first time. Actuators can also be used with VBG2 and VBG3 Ball valves (up to DN32). Mounting kit 5112-11/U to be used.

2-way pressure independent balancing and control valve

V5005T Kombi-FCU Pressure Independent Balancing and Control Valve

The V5005T Kombi-FCU is a Pressure Independent Control Valve (PICV). It combines a flow controller and a temperature controller in one valve. Equipped with an actuator Kombi-FCU provides a modulating temperature control. It is suitable for use in variable and constant flow systems. They may be used as constant flow limiter in constant flow systems (without an actuator) or as a Pressure Independent Control Valve in variable flow systems.

V5005T Kombi-FCU is typically used for balancing and temperature control of fan coil units, chilled ceilings and one-pipe heating systems.

- Automatic pressure independent balancing and control
- Precise pressure independent flow performance
- Highest energy saving potential due to efficient energy transfer and minimized pump speed
- Measuring possibility to find the optimal setpoint for the pump
- Versions with or without measuring connections available
- Reduced movements of actuators as pressure fluctuations do not influence the required temperature
- No complex calculation needed for selection
- No balancing method needed for commissioning
- Wide range of application
- Sizes DN15 to DN25 cover all popular sizes on FCUs
- Various versions to support standard flow rates as well as low flow and high flow needs
- Covers hydronic balancing and temperature control in one valve thus reducing mounting costs
- Easy commissioning
- Presetting with visual flow scale indicating directly the preset liters per hour
- Pre-setting by hand without the need of tools
- Can balance a system even if only parts of a building are in operation
- Maintenance friendly
- Emergency shutoff function with plastic cap – not for permanent use
- Measuring possibility for problematic applications (only with versions having measuring connections)
- Dirt resistant no dead zones in the valves. Continuous flow assures self cleaning effects

Control Ball valves

Six way ball valve, change-over, PN16, DN15-20, VBG6

VBG6 6-way ball valves, are designed as change-over valve to connect a 2-pipe heat exchanger (Fan-coil Unit or Ceiling) to a 4-pipe system, ideally together with the Kombi-FCU Pressure Independent Control Valve used for dynamic balancing. The simultaneous rotation of two balls, mechanically connected to one stem, opens supply and return on one side (e.g. cooling) and closes at the same time the other side (heating). That avoids any mixing between the flows, and reduces potential energy losses. VBG6 valves are designed to be actuated by a MR6 rotary valve actuator (on/off or modulating). Position feedback on the modulating actuator can be used for remote system monitoring and system check.

Medium type	water or water-glycol mixture according to VDI 2035
Materials	body brass, inner parts brass
Packing	EPDM, PTFE, FKM
Angle of rotation	90 °
Media temp.	2 ... 110 °C
Pressure rating	PN16
Port connection	ext. thread flat sealing

Safety thermostats

Safety strap-on thermostat (temperature limiter) for floor heating applications (STB) including 2m capillary (tube)

The STB Series of universal strap-on thermostats are designed for floor heating applications. They are suitable for use as strap-on, wall-mounted, or (with optional immersion well) immersion thermostat.

Devices of the STB Series likewise measure temperature. If the sensor temperature exceeds the set value, a snap-action switch opens, interrupting the electrical circuit, and remains open until reset manually. (Also, if the sensor temperature drops to below approx. - 20 degrees C, the snap-action switch opens, but closes again automatically after the temperature rises again.) To manually reset the device, the sensor temperature must drop by more than approx. 10 K.

Electronic flow switches for air, compact version (KSL)

These compact flow monitors reliably measure air flow in air ducts and detect any falling below a predefined switching point. The sensitivity and hence the switching point can be set very precisely with a potentiometer. The switching state is shown by a yellow LED. The sensor tip must be completely immersed in the medium. Signal evaluation and the switching process take place within the unit itself so that no additional space is required inside the switch cabinet.

Protection class	IP65
Switch function/capacity	SPDT, 250 Vac, 10(2) A
Immersion depth	115 mm
Setpoint range	0,1..30 m/s
