5. USB Port

### OTOFIX V1 Description

| LED                        | Color        | Description   |
|----------------------------|--------------|---|
| Power LED                  | Yellow       | VCI is powered on and performing self-check.  |
|                            | Green        | VCI is ready for use.   |
|                            | Flashing Red | Firmware is updating.   |
| Vehicle/<br>Connection LED | Green        | <ul style="list-style-type: none"> <li>• <b>Solid Green:</b> VCI is connected via USB cable.</li> <li>• <b>Flashing Green:</b> VCI is communicating via USB cable.</li> </ul> |
|                            | Blue         | <ul style="list-style-type: none"> <li>• <b>Solid Blue:</b> VCI is connected via Bluetooth.</li> <li>• <b>Flashing Blue:</b> VCI is communicating via Bluetooth.</li> </ul>   |

## Getting Started

**IMPORTANT:** Before operating or maintaining this unit, please read the Quick Reference Guide and User Manual carefully, paying extra attention to the safety warnings and precautions. Failure to use this unit correctly may cause damage and/or personal injury and will void the product warranty.

1

- Insert the V1 into the OBDII port, which is generally located under the vehicle dashboard.

2

- Long press the Lock/Power button to power up the diagnostic tablet. Ensure the tablet has a charged battery or is connected to the DC power supply.

3

- Pair up the diagnostic tablet with the V1 via Bluetooth to establish a communication link.

☑ **NOTE:** The diagnostic tablet and the V1 are configured to automatically synchronize with each other on the initial use, therefore, the pair up is not required.

OR

- Pair up the diagnostic tablet with the V1 via USB to establish a communication link.

4

- When the V1 is properly connected to the vehicle and the diagnostic tablet, the VCI status button at the bottom bar on the screen displays a green badge. This indicates your diagnostic tablet is ready to start vehicle diagnosis.
