## What's New

### IN THIS SECTION

- [VPNs | 3](#)
- [Platform and Infrastructure | 4](#)

Learn about new features introduced in the Juniper Secure Connect application in this release.

## VPNs

- **Support for SAML authentication**—Juniper Secure Connect application supports remote user authentication using Security Assertion Markup Language version 2 (SAML 2.0). The browser on your device (such as a Windows laptop) acts as the agent for Single Sign-On (SSO). You can use the feature when the administrator enables the feature on the SRX Series Firewall.

# Platform and Infrastructure

- **Support for post-logon banner**—Juniper Secure Connect application displays a post-logon banner after the user authentication. The banner appears on the screen if the feature is configured on your SRX Series Firewall. You can accept the banner message to proceed with the connection or decline the message to deny the connection. The banner message helps in improving the security awareness, guides you on usage policies, or informs you about an important network information.
