

**PLEASE NOTE:**

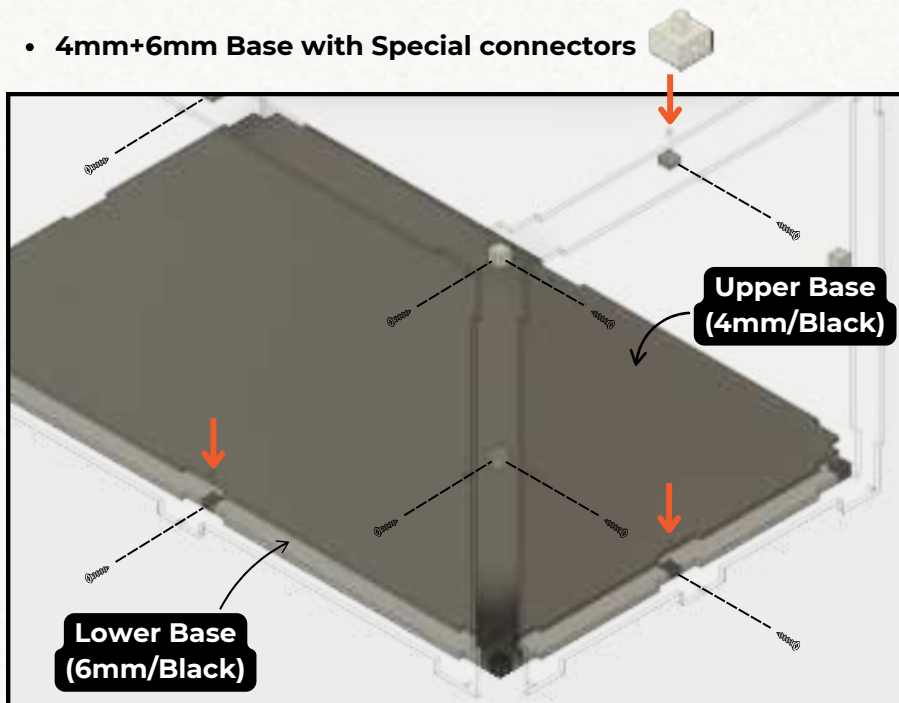

All acrylic panels have protective film applied on both sides. Please remove before assemble.

**\*\* All side panels have a top and bottom orientation — the deeper cutouts go at the bottom.**

- Connect the four clear side panels using the connectors, making sure the deeper cutouts face downward toward the base. *(Depending on the height, additional connections may be required for extra stability.)*
- Insert the stands or LEGO studs into the base panel (if applicable).
- Position the assembled side panels around the base, then close the case by placing the lid on top.
- Always hold the base when moving the display case.

- 4mm+6mm Base with Special connectors

- Tier Case with shelf
