

You've Got This!

Flying moths don't leave holes in your clothes, but their larvae do. To stop the cycle, we apply a three step approach to get rid of moths and keep them away:

01

Use the professional grade, safe-for-home Moth Killer Kit to kill existing moth eggs, larvae, and adult moths.

02

To prevent another outbreak, hang traps in your closet to catch male moths and stop the breeding cycle.

03

Monitor your closet and continue to use our Moth Traps for ongoing protection.
