

STEP 1.

Screw **DRESS PANEL SPACER** (Feet) on to the bottom of each panel – to ensure level surface underneath, the feet/spacers should sit in top of the bottom lip.

STEP 3.

Screw **PANEL CORNER TRIMS** on to brace the side panels together – ensure the predrilled holes align with the side panel holes.

STEP 2.

Hang each **DRESS PANEL** to the sides of Foodcube (A,A,B & C).
*The dress panels with the outlet holes are placed on the sides where the Level setters are. Ensure the netting clips aren't placed into the Foodcube when fitting the dress panels.

STEP 4.

Screw **HOLE PANEL TRIMS** on. You may choose to leave one off if you want easy access to the level setter. Place the netting clips into the Foodcube once all cladding panels are attached.
